### I

1. Now that I have given the first general outline of geography, it is proper for me to discuss next the several parts of the inhabited world; indeed, I have promised to do so,<sup>1</sup> and I think that thus far my treatise has been correctly apportioned. But I must begin again with Europe and with those parts of Europe with which I began at first,<sup>2</sup> and for the same reasons.

2. As I was saying, the first part of Europe is the western, namely, Iberia. Now of Iberia the larger part affords but poor means of livelihood; for most of the inhabited country consists of mountains, forests, and plains whose soil is thin—and even that not uniformly well-watered. And Northern Iberia, in addition to its ruggedness, not only is extremely cold, but lies next to the ocean, and thus has acquired its characteristic of inhospitality and aversion to intercourse with other countries; consequently, it is an exceedingly wretched place to live in. Such, then, is the character of the northern parts; but almost the whole of Southern Iberia is fertile, particularly the region outside the Pillars. This

<sup>1</sup> According to Strabo, there were two "Galatio" ("Celtic") gulfs, the one "looking towards the north and Britain" (2. 5. 28), and the other on the Mediterranean side; that is, respectively, the Gulf of Gascogne, in its extent on the French side of the Pyrenees, and the Gulf of

will become clear in the course of my detailed description of Iberia. But first I must briefly describe its shape and give its dimensions.

3. Iberia is like an ox-hide extending in length from west to east, its fore-parts toward the east, and in breadth from north to south. It is six thousand stadia in length all told, and five thousand stadia in its greatest breadth; though in some places it is much less than three thousand in breadth, particularly near the Pyrenees, which form its eastern side. That is, an unbroken chain of mountains, stretching from south to north, forms the boundary line between Celtica and Iberia; and since Celtica, as well as Iberia, varies in breadth, the part of each country that is narrowest in breadth between Our Sea and the ocean is that which lies nearest to the Pyrenees, on either side of those mountains, and forms gulfs both at the ocean and at Our Sea. The Celtic gulfs, however, which are also called Galatic, are larger, and the isthmus which they form is narrower as compared with that of Iberia.<sup>1</sup> So the eastern side of Iberia is formed by the Pyrenees; the southern side is formed in part by Our Sea, from the Pyrenees to the Pillars, and from that point on by the ocean, up to what is called the Sacred Cape<sup>2</sup>; the third is the western side, which

Lyon. The latter, however, comprised within itself the two "Galatic" gulfs (4. 1. 6.) here mentioned as "larger"; that is, "larger" than the two gulfs on the Iberian side of the Pyrenees, which Strabo does not name (see small map inserted in Map III in this volume). The fact is, however, that the shortest distance across Spain, say from San Sebastian to Tarragona, is shorter than that across France, say from Bayonne to Narbonne.

is approximately parallel to the Pyrenees and extends from the Sacred Cape to that Cape of the Artabrians which is called Nerium<sup>1</sup>; and the fourth side extends from Cape Nerium up to the northern headlands of the Pyrenees.

4. But, to resume, let me describe Iberia in detail, beginning with the Sacred Cape. This cape is the most westerly point, not only of Europe, but of the whole inhabited world; for, whereas the inhabited world comes to an end in the west with the two continents (in the one case, at the headlands of Europe, and in the other, at the extremities of Libya, of which regions the Iberians occupy the one, and the Maurusians the other), the headlands of Iberia project at the aforementioned cape about fifteen hundred stadia beyond those of Libya. Moreover, the country adjacent to this cape they call in the Latin language "Cuneus," meaning thereby to indicate its wedge-shape. But as for the cape itself, which projects into the sea, Artemidorus (who visited the place, as he says) likens it to a ship; and he says that three little islands help to give it this shape, one of these islands occupying the position of a ship's beak, and the other two, which have fairly good places of anchorage, occupying the position of cat-heads. But as for Heracles, he says, there is neither a temple of his to be seen on the cape (as Ephorus wrongly states), nor an altar to him, or to any other god either, but only stones<sup>2</sup> in many spots, lying in groups of three or four, which in accordance with a native custom are

<sup>1</sup> "Roeking Stones." They were so nicely poised on their points that they could be rocked or turned with merely a slight force.

turned round by those who visit the place, and then, after the pouring of a libation, are moved back again.<sup>1</sup> And it is not lawful, he adds, to offer sacrifice there, nor, at night, even to set foot on the place, because the gods, the people say, occupy it at that time; but those who come to see the place spend the night in a neighbouring village, and then enter the place by day, taking water with them, for there is no water there.

5. Now these assertions of Artemidorus are allowable, and we should believe them; but the stories which he has told in agreement with the common crowd of people are by no means to be believed. For example, it is a general saying among the people, according to Poseidonius, that in the regions along the coast of the ocean the sun is larger when it sets, and that it sets with a noise much as if the sea were sizzling to extinguish it because of its falling into the depths. But, says Poseidonius, this is false, as also the statement that night follows instantly upon sunset; for night does not come on instantly, but after a slight interval, just as it does on the coasts of the other large seas. For in regions where the sun sets behind mountains, he says, the daylight lasts a longer time after sunset, as a result of the indirect light; but on the sea-coasts no considerable interval ensues, albeit the darkness does not come on instantly, either, any more than it does on the great plains. And, he says, the visual impression of the size of the sun increases alike both at sunset and sunrise on the seas, because at those times a greater amount of vapour rises

from the water; that is, the visual rays, in passing through this vapour as through a lens,<sup>1</sup> are broken,<sup>2</sup> and therefore the visual impression is magnified, just as it is when the setting or the rising sun, or moon, is seen through a dry, thin cloud, at which time the heavenly body also appears somewhat ruddy. He convinced himself, he says, of the falsity of the above assertions during his stay of thirty days in Gades, when he observed the settings of the sun. Nevertheless, Artemidorus says that the sun sets a hundred times larger than usual, and that night comes on immediately! However, if we look closely at his declaration, we are obliged to assume that he did not himself see this phenomenon at the Sacred Cape, for he states that no one sets foot on the place by night; and hence no one could set foot on it while the sun was setting, either, if it be true that night comes on immediately. Neither, in fact, did he see it at any other point on the ocean-coast, for Gades also is on the ocean, and Poseidonius and several others bear witness against him.

6. The coastline adjacent to the Sacred Cape, on the west, is the beginning of the western side of Iberia as far as the mouth of the Tagus River, and, on the south, the beginning of the southern side as far as another river, the Anas, and its mouth. Both rivers flow from the eastern regions; but the Tagus, which is a much larger stream than the other, flows straight westward to its mouth, whereas the Anas turns south, and marks off a boundary of the inter-fluvial region, which is inhabited for the most part

that the visual rays emanate from the eyes, but Aristotle (*l. c.*) controverted it. See also Plato, *Timaeus*, 450 and 46 B; and Seneca, *Quaestiones Naturales*, 1. 6.

by Celtic peoples, and by certain of the Lusitanians who were transplanted thither by the Romans from the other side of the Tagus. But in the regions farther inland dwell Carpetanians, Oretanians, and large numbers of Vettonians. This country, to be sure, has only a moderately happy lot, but that which lies next to it on the east and south takes pre-eminence in comparison with the entire inhabited world in respect of fertility and of the goodly products of land and sea. This is the country through which the Bætis flows, which rises in the same districts as both the Anas and the Tagus, and in size is about midway between the other two rivers. Like the Anas, however, it at first flows towards the west, and then turns south, and empties on the same coast as the Anas. They call the country Bætica after the river, and also Turdetania after the inhabitants; yet they call the inhabitants both Turdetanians and Turdulians, some believing that they are the same people, others that they are different. Among the latter is Polybius, for he states that the Turdulians are neighbours of the Turdetanians on the north; but at the present time there is no distinction to be seen among them. The Turdetanians are ranked as the wisest of the Iberians; and they make use of an alphabet, and possess records of their ancient history, poems, and laws written in verse that are six thousand years old,<sup>1</sup> as they assert. And also the other Iberians use an alphabet, though not letters of one and the same character, for their speech is not one and the same, either. Now Turdetania, the country this side the

<sup>1</sup> Previous editors have unnecessarily emended Calpe to Carteia. Ancient writers, in describing the highway on the coast from Malaga to Gades, thought of Calpe and its close neighbour, Carteia, as a single halting-place. In the

Anas, stretches eastward as far as Oretania, and southward as far as the coastline that extends from the mouths of the Anas to the Pillars. But I must describe it and the regions that are close to it at greater length, telling all that contributes to our knowledge of their natural advantages and happy lot.

7. Between this stretch of coastline, on which both the Baetis and the Anas empty, and the limits of Maurusia, the Atlantic Ocean breaks in and thus forms the strait at the Pillars, and by this strait the interior sea connects with the exterior sea. Now at this strait there is a mountain belonging to those Iberians that are called Bastetanians, who are also called Bastulians; I mean Calpe, which, although its circumference is not great, rises to so great a height and is so steep that from a distance it looks like an island. So when you sail from Our Sea into the exterior sea, you have this mountain on your right hand; and near it, within a distance of forty stadia, is the city Calpe,<sup>1</sup> an important and ancient city, which was once a naval station of the Iberians. And some further say that it was founded by Heracles, among whom is Timosthenes, who says that in ancient times it was also called Heracleia, and that its great city-walls and its docks are still to be seen.

8. Then comes Menlaria, with its establishments for salting fish; and next, the city and river of Belon. It is from Belon that people generally take ship for the passage across to Tingis in Maurusia; and at Belon there are trading-places and establish-

ments for salting fish. There used to be a city of Zelis, also, a neighbour of Tingis, but the Romans transplanted it to the opposite coast of Iberia, taking along some of the inhabitants of Tingis; and they also sent some of their own people thither as colonists and named the city "Julia Izoa." Then comes Gades, an island separated from Turdetania by a narrow strait, and distant from Calpe about seven hundred and fifty stadia (though some say eight hundred). This island does not differ at all from the others except that, because of the daring of its inhabitants as sailors, and because of their friendship for the Romans, it has made such advances in every kind of prosperity that, although situated at the extremity of the earth, it is the most famous of them all. But I shall tell about Gades when I discuss the other islands.

9. Next in order comes what is called the Port of Menestheus, and then the estuary at Asta and Nabrisa. (The name of estuaries is given to hollows that are covered by the sea at the high tides, and, like rivers, afford waterways into the interior and to the cities on their shores.) Then immediately comes the outlet of the Baetis, which has a twofold division; and the island that is enclosed by the two mouths has a coastal boundary of one hundred stadia, or, as some say, still more than that. Hereabouts is the oracle of Menestheus; and also the tower of Caepio, which is situated upon a rock that is washed on all sides by the waves, and, like the Pharos tower,<sup>1</sup> is a marvellous structure built for the sake of the safety of mariners; for not only do the alluvial

deposits that are discharged by the river form shallows, but the region in front of it is full of reefs, so that there is need of a conspicuous beacon. Thence is the waterway up the Baetis, and the city of Eburna, and the shrine of Phosphorus,<sup>1</sup> which they call "Lux Dubia." Then come the waterways up the other estuaries; and after that the Anas River, which also has two mouths, and the waterway from both mouths into the interior. Then, finally, comes the Sacred Cape, which is less than two thousand stadia distant from Gades. Some, however, say that the distance from the Sacred Cape to the mouth of the Anas is sixty miles, and thence to the mouth of the Baetis, a hundred, and then, to Gades, seventy.<sup>2</sup>

1. At all events, it is above the coast this side the Anas that Turdetania lies, and through it flows the Baetis River. And its boundary is marked off on the west and north by the Anas River, on the east by a part of Carpetania and by Oretania, and on the south by those of the Bastetanians who occupy a narrow stretch of coast between Calpe and Gades and by the sea next to that stretch as far as the Anas. But these Bastetanians of whom I have just spoken also belong to Turdetania, and so do those Bastetanians beyond the Anas, and most of its immediate neighbours. The extent of this country is not more than two thousand stadia, that is, in length or breadth,<sup>3</sup> but it contains a surpassing

number of cities—as many, indeed, as two hundred, it is said. The best known are those situated on the rivers, on the estuaries, and on the sea; and this is due to their commercial intercourse. But the two that have grown most in fame and in power are Corduba, which was founded by Marcellus, and the city of the Gaditanians: the latter, because of its maritime commerce and because it associated itself with the Romans as an ally; the former because of the excellence of its soil and the extent of its territory, though the Baetis River has also contributed in great measure to its growth; and it has been inhabited from the beginning by picked men of the Romans and of the native Iberians; what is more, the first colony which the Romans sent to these regions was that to Corduba. After Corduba and the city of the Gaditanians, Hispalis, itself also a colony of the Romans, is most famous, and still remains the trade-centre of the district; yet, in the matter of distinction, that is, in the fact that the soldiers of Caesar have recently colonised it, Baetis<sup>1</sup> ranks higher, albeit a city not notable for its population.

2. After these cities come Italica and Ilipa, both near the Baetis River; and Astigis, farther away from the river, and Carino, and Obulco, and, besides these, the cities in which the sons of Pompey were defeated, namely, Munda, Ategua, Urso, Tuccis, Ulia, and Aegua<sup>2</sup>; and all of these

*pūdie*, ii. 2764) says, "Undoubtedly Italica is meant," but the manner in which Italica is introduced below makes this seem improbable.

<sup>2</sup> The city of Aegua, in Turdotania, is otherwise unknown. Escua is probably the correct reading.

<sup>1</sup> χιλίους, the reading of A, adopted by Casaubon instead of ἑξακισχίλους (BC).

<sup>2</sup> Hübner (Pauly-Wissowa, III. 1618; iv. 1223) would delete Munda, thus making apply to Corduba the reference to "the capital city" (Ptolemaeus 2. 4. 9), and to the distance of "four hundred stadia from Carteia" (Caesar, *Bell. Hisp.* 32. 5, makes the distance from Carteia to Corduba one hundred and seventy miles, i. e. one thousand three hundred and sixty stadia). But according to Strabo's text Munda was a city near Corduba, and must not be identified with the Monda of to-day (four hundred and forty stadia from Carteia).

## GEOGRAPHY, 3. 2. 2-3

cities are not far from Corduba. In a way, Munda<sup>1</sup> has become the capital city of this region. Munda<sup>1</sup> is one thousand four hundred stadia distant from Carteia, whither Gnaeus fled after his defeat<sup>2</sup>; he sailed away from there, and disembarked into a certain mountainous region overlooking the sea, where he was put to death. But his brother Sextus escaped from Corduba, carried on war for a short time in Iberia, and later on caused Sicily to revolt; then, driven out of Sicily into Asia, he was captured by the generals of Antony, and ended his life at Miletus.<sup>3</sup> In the country of the Celta,<sup>4</sup> Conistorgis is the best known city; but on the estuaries Asta is the best known, where the Gaditanians<sup>5</sup> of to-day usually hold their assemblies, and it is situated not much more than one hundred stadia beyond the seaport of the island.

3. The Bactis has a large population along its shores, and is navigable for approximately one thousand two hundred stadia from the sea up to Corduba and the regions a little higher up. Furthermore, the land along the river, and the little islands in the river, are exceedingly well cultivated. And besides that, there is the charm of the scenery, for

<sup>1</sup> Caesar's defeat of Gnaeus Pompey at the battle of Munda took place in March, 45 B.C.

<sup>2</sup> According to Dio Cassius (49. 18), Sextus was captured, and, apparently, executed at Milacium (a city in Phrygia Epictetus); but Appian (*Civil Wars*, 5. 144) says that he was executed at Miletus.

<sup>4</sup> The Iberian Celts, who lived in what is now Southern Portugal.

<sup>5</sup> Pliny (*Nat. Hist.* 3. 1. 8) says that there were four jurisdictions in Bactica, those of Gades, Corduba, Astigis, and Hispalis.

the farms are fully improved with groves and gardens of the various plants. Now, up to Hispalis, the river is navigable for merchant-vessels of considerable size, that is, for a distance not much short of five hundred stadia; to the cities higher up the stream as far as Ilipa, for the smaller merchant vessels; and, as far as Corduba, for the river-boats (at the present time these are builded boats, whereas in antiquity they were merely dugout canoes); but above Corduba, in the direction of Castalo, the river is not navigable. On the north, there are some mountain-ridges which extend parallel to the river, approaching it closely, sometimes more so, sometimes less, and they are full of mines. Silver, however, is the most plentiful in the regions about Ilipa, and in those about Sisapo—I mean what is called the Old Sisapo as well as the New Sisapo; and at the place called Cotinae<sup>1</sup> both copper and gold are mined at the same time. Now on your left, as you sail up the river, are these mountains, while on your right is a large plain, high, very productive, with lofty trees, and affording good pasturage. The Anas also is navigable, though neither for such large vessels nor for so great a distance. Beyond the Anas, too, lie mountains that contain ores, and these mountains reach down to the Tagus River. Now the regions which contain ores are necessarily rugged as well as rather poor in soil, precisely as are the regions that join Carpetania, and still more so those that join Celtiberia. And such is the nature of Baeturia also, which contains arid plains that stretch along the Anas.

4. Turdetania itself is marvellously blessed by nature; and while it produces all things, and likewise great quantities of them, these blessings are doubled by the facilities of exportation; for its surplus products are bartered off with ease because of the large number of the merchant vessels. This is made possible by the rivers, and by the estuaries as well, which, as I have said,<sup>1</sup> resemble rivers, and, like rivers, are navigable inland from the sea, not only for small boats but also for large ones, to the cities of the interior. For the whole country beyond the seaboard that lies between the Sacred Cape and the Pillars is a plain for a considerable distance inland. And here, at a large number of places, are inlets which run up from the sea into the interior, resembling moderate-sized ravines or simply river-beds, and extending for many stadia; and these inlets are filled by the overflows of the sea at the flood-tides, so that one can sail inland thereon as readily as on the rivers—in fact, better, for it is like sailing down the rivers, not only because there is no opposing current, but because, on account of the flood-tide, the sea wafts you onwards just as the river-current does. And the overflows are greater on this coast than in the other regions, because the sea, coming from the great ocean, is compressed into the narrow strait which Maurusia forms with Iberia, there meets resistance, and then easily rushes to those parts of the land that yield to it. Now, while a number of the inlets of this kind are emptied at the ebb-tides (though some of them do not become wholly dry), yet a number of them enclose islands

within themselves. Such, then, are the estuaries between the Sacred Cape and the Pillars, for they have an excessive rise of tide as compared with those in the other regions. A rise of tide like this affords a certain advantage to be utilised by sailors, namely, the estuaries are made more numerous and larger, oftentimes being navigable even for a distance of eight<sup>1</sup> stadia; so that, after a fashion, it renders the whole country navigable and convenient both for exporting and importing merchandise. And yet it also affords a certain annoyance; for, on account of the vehemence of the flood-tides, which press with superior force against the current of the rivers, navigation on the rivers is attended by no small danger to the vessels, alike in their descent and ascent. But in the case of the estuaries the ebb-tides too are harmful; for the ebb-tides too grow violent in proportion to the strength of the flood-tides, and on account of their swiftness have oftentimes even left the ship stranded on dry land. Again, the cattle which cross over to the islands that lie off the rivers or the estuaries have at times actually been engulfed; at other times they have merely been cut off, and in their struggle to get back to the land lacked the strength to do so, and perished. But the cows, they say, are by observation actually aware of what happens, wait for the retirement of the sea, and then make off for the mainland.

5. At any rate, it was because the people had

learned the character of these regions and that the estuaries could subserve the same purpose as the rivers, that they built cities and other settlements on their banks, just as on the rivers. Among these cities are Asta, Nabrisa, Onoba, Ossonoba, Maenoba, and several others. Again, canals that have been dug in a number of places are an additional aid, since many are the points thereon from which and to which the people carry on their traffic, not only with one another but also with the outside world. And further, the meetings of the waters when the flood-tides reach far inland are likewise helpful, for the waters pour across over the isthmuses that separate the waterways, thus rendering the isthmuses navigable also; so that one can cross over by boat from the rivers into the estuaries and from the estuaries into the rivers. But all the foreign trade of the country is carried on with Italy and Rome, since the voyage as far as the Pillars is good, except, perhaps, for a certain difficulty in passing the strait, and also the voyage on the high seas of Our Sea. For the sea-routes all pass through a zone of fair weather, particularly if the sailor keeps to the high seas; and this fact is advantageous to the merchant-freighters. And further, the winds on the high seas are regular. Added to that, too, is the present peace, because all piracy has been broken up, and hence the sailors feel wholly at ease. Poseidonius says that he observed a peculiar circumstance on his return voyage from Iberia, namely, that the east winds on that sea, as far as the Gulf of Sardinia, blew at a fixed time each

year; and that this was why he barely reached Italy even in three months; for he was driven out of his course in both directions, not only near to the Gymnesian Islands and Sardinia, but also to the different parts of Libya<sup>1</sup> opposite to these islands.

6. There are exported from Turdetania large quantities of grain and wine, and also olive oil, not only in large quantities, but also of best quality. And further, wax, honey, and pitch are exported from there, and large quantities of kermes,<sup>2</sup> and ruddle<sup>3</sup> which is not inferior to the Sinopean earth. And they build their ships there out of native timber; and they have salt quarries in their country, and not a few streams of salt water; and not unimportant, either, is the fish-salting industry that is carried on, not only from this county, but also from the rest of the seaboard outside the Pillars; and the product is not inferior to that of the Pontus. Formerly much cloth came from Turdetania, but now, wool, rather of the raven-black sort.<sup>4</sup> And it is surpassingly beautiful; at all events, the rams are bought for breeding purposes at a talent apiece. Surpassing, too, are the delicate fabrics which are woven by the people of Salacia.<sup>5</sup> Turdetania also has a great abundance of cattle of all kinds, and of game. But there are scarcely any destructive animals, except the burrowing hares, by some called "peelers"; for they damage both plants and seeds by eating the

roots. This pest occurs throughout almost the whole of Iberia, and extends even as far as Massilia, and infests the islands as well. The inhabitants of the Gynnesian Islands, it is said, once sent an embassy to Rome to ask for a new place of abode, for they were being driven out by these animals, because they could not hold out against them on account of their great numbers. Now perhaps such a remedy is needed against so great a warfare (which is not always the case, but only when there is some destructive plague like that of snakes or field-mice),<sup>1</sup> but, against the moderate pest, several methods of hunting have been discovered; more than that, they make a point of breeding Libyan ferrets, which they muzzle and send into the holes. The ferrets with their claws drag outside all the rabbits they catch, or else force them to flee into the open, where men, stationed at the hole, catch them as they are driven out. The abundance of the exports of Turdetania is indicated by the size and the number of the ships; for merchantmen of the greatest size sail from this country to Dienearchia, and to Ostia, the seaport of Rome; and their number very nearly rivals that of the Libyan ships.

7. Although the interior of Turdetania is so productive, it will be found that the seaboard vies with it in its goodly products from the sea. For the various kinds of oysters as well as mussels are in general surpassing, both in their number and in their size, along the whole of the exterior sea; but

especially so here, inasmuch as the flood-tides and the ebb-tides have increased power here, and these tides, it is reasonable to suppose, are, on account of the exercise they give, responsible both for the number and the size of them. So it is, in the same way, with respect to all the cetaceans: narwhals, "phalaenae"<sup>1</sup> and spouting-whales; when these spout, the distant observer seems to see a cloud-like pillar. And further, the conger-eels become monsters, far exceeding in size those of Our Sea; and so do the lampreys and several other edible fish of the kind. And at Carteia, it is said, there are shells of trumpet-fish and purple-fish which hold ten cotylae,<sup>2</sup> and in the regions further out to sea the lamprey and the conger-eel weigh even more than eighty minae,<sup>3</sup> the sea-polypus a talent,<sup>4</sup> the cuttle-fish are two cubits long—and other things in like proportion. Again, large numbers of plump, fat tunny-fish congregate hither from the other coast, namely, that outside the Pillars. And they feed on the acorns of a certain very stunted oak that grows at the bottom of the sea and produces very large fruit.<sup>5</sup> This oak also grows in abundance on the dry land, in Iberia; and although its roots are large like those of a full-grown oak, yet it does not grow as high as a low bush. But the sea-oak brings forth so much fruit that, after the ripening, the seacoast,

both inside and outside the Pillars, is covered with the acorns, for they are cast ashore by the tides. However, those inside the Pillars are always smaller, and are to be found in greater quantities. Polybius tells us that the sea casts these acorns ashore even as far as Latium, unless perhaps, says he, also Sardinia and the neighbouring land produce them. And further, the nearer the tunny-fish approach the Pillars, in coming from the exterior sea, the leaner they become, since their food fails them. This creature, says Polybius, is therefore a sea-hog, for it is fond of the acorn and gets exceedingly fat on it; and whenever the sea-oak has produced a large crop of acorns, there is also a large crop of tunny fish.

8. Now, although the aforesaid country has been endowed with so many good things, still one might welcome and admire, not least of all, but even most of all, its natural richness in metals. For the whole country of the Iberians is full of metals, although not all of it is so rich in fruit, or so fertile either, and in particular that part of it which is well supplied with metals. It is rare for a country to be fortunate in both respects, and it is also rare for the same country to have within a small area an abundance of all kinds of metals. But as for Turdetania and the territory adjoining it, there is no worthy word of praise left to him who wishes to praise their excellence in this respect. Up to the present moment, in fact, neither gold, nor silver, nor yet copper, nor iron, has been found anywhere in the world, in a natural state, either in such quantity or of such good quality. And the gold is not only mined, but is also washed down; that is, the gold-bearing sand is carried down by the rivers and the torrents, although it is often found in

the waterless districts also; but in these districts it cannot be seen, whereas in the flooded districts the gold-dust glitters. Besides, they flood the waterless districts by conducting water thither, and thus they make the gold-dust glitter; and they also get the gold out by digging pits, and by inventing other means for washing the sand; and the so-called "gold-washeries" are now more numerous than the gold-mines. The Galatae<sup>1</sup> hold that their own mines, both those in the Cemmenns<sup>2</sup> Mountains and those situated at the foot of the Pyrenees themselves, are equal to those of Turdetania; the metals from the latter, however, are held in greater esteem. And in the gold-dust, they say, nuggets weighing as much as half a pound are sometimes found, which are called "palae,"<sup>3</sup> and they need but little refining. They further say that when stones are split they find in them small nuggets resembling nipples, and when the gold is smelted and refined by means of a sort of styptic earth<sup>4</sup> the residuum thereof is "electrum";<sup>5</sup> and, again, that when this electrum, which contains a mixture of silver and gold, is smelted, the silver is burned away, while the gold remains. For the alloy-type is easily fused and stone-like.<sup>6</sup> For this reason, too, the gold is preferably melted with chaff-fire, because the flame, on account of its softness, is suitable to a substance that yields and fuses easily; but the charcoal-fire consumes much of it because, owing to its intensity, it

<sup>2</sup> Electrum is defined by Pliny (*Nat. Hist.* 33. 23) as consisting of one part of silver to four parts of gold.

<sup>3</sup> In fact, the alloy is more easily fused, and harder, than either of the constituent metals.

over-melts the gold and carries it off as vapour. The soil is carried along in the streams, and is washed near by in troughs; or else a pit is dug, and the soil that has been accumulated is there washed. They build their silver-smelting furnaces with high chimneys, so that the gas from the ore may be carried high into the air; for it is heavy and deadly. Some of the copper-mines are called gold-mines, and from this fact it is inferred that in former times gold was mined from them.

9. Poseidonius, in praising the quantity and the excellence of these ores, does not abstain from his usual rhetorical speech; indeed, he enthusiastically concurs with the extravagant stories told; for example, he does not discredit the story, he says, that, when on a time the forests had been burned, the soil, since it was composed of silver and gold ores, melted and boiled out over the surface, because, as he says, every mountain and every hill is bullion heaped up there by some prodigal fortune. And, in general, he says, anyone who had seen these regions would declare that they are everlasting storehouses of nature, or a never failing treasury of an empire. For the country was, he adds, not only rich, but also rich down below; and with the Turdetanians it is verily Pluto,<sup>1</sup> and not Hades, who inhabits the region down below. Such, then, are the flowery utterances of Poseidonius on this subject—himself drawing much of his language from a mine, as it were. Again, in speaking of the industry of the miners, he cites the statement of Demetrius of Phalerum. Demetrius, he says, states in reference to the Attic silver-mines,<sup>2</sup>

<sup>1</sup> The silver-mines of Laurium.

that the people dig as strenuously as if they expected to bring up Pluto himself. So Poseidonius implies that the energy and industry of the Turdetanian miners is similar, since they cut their shafts aslant and deep, and, as regards the streams that meet them in the shafts, oftentimes draw them off with the Egyptian screw.<sup>1</sup> However, the whole affair, he says, is never the same for these miners as for the Attic miners; indeed, for the latter, mining is like a riddle: "What they took up," he says, "they did not take, yet what they had, they lost";<sup>2</sup> but, for the Turdetanians, mining is profitable beyond measure, since one-fourth of the ore brought out by their copper-workers is pure copper, while some of their private adventurers who search for silver pick up within three days a Ruboean talent<sup>3</sup> of silver. Tin, however, is not found there on the surface of the ground, he says, as the historians continually repeat, but is dug up; and it is produced both in the country of the barbarians who live beyond Lusitania, and in the Cassiterides Islands; and tin is brought to Massilia from the British Islands also. But among the Artabrians, who live farthest on the north-west of Lusitania, the soil "effloresces," he says, with silver, tin, and "white gold" (for it is mixed with silver). This soil, however, he adds, is

<sup>1</sup> This riddle was said to have been propounded to Homer by some fishermen after they had had bad luck. They sat on the sand with their small catch, and became covered with vermin. The fish they abandoned, but the vermin they could neither abandon nor catch. Demetrius, Poseidonius, Diodorus Siculus (6. 37), Athenaeus (6. 23), and Strabo apply the riddle to Attica's loss of invested capital when the revenues from her mines failed.

<sup>3</sup> This simple method (now called "jigging") of separating the mineral from the light refuse is still in use. The sieve is

brought by the streams ; and the women scrape it up with shovels and wash it in sieves woven basket-like. Such, then, is what Poseidonius has said about the mines.

10. Polybius, in mentioning the silver-mines of New Carthage, says that they are very large ; that they are distant from the city about twenty stadia and embrace an area four hundred stadia in circuit ; and that forty thousand workmen stay there, who (in his time) bring into the Roman exchequer a daily revenue of twenty-five thousand drachmae. But as for the processes of the work, I omit all he says about it (for it is a long story) except what he says of the silver-bearing ore that is carried along in the streams, namely, that it is crushed and by means of sieves disengaged in water ;<sup>1</sup> then the sediment is again crushed, and again strained through (the waters meantime being poured off), and crushed ; then the fifth sediment is smelted, and, after the lead has been poured off, yields the pure silver. The silver-mines are still being worked at the present time ; they are not state-property, however, either at New Carthage or anywhere else, but have passed over to private ownership. But the majority of the gold-mines are state-property. Both in Castulo and elsewhere there is a special metal of mined lead ; this, too, has a slight quantity of silver mixed with it, though not enough to make the refining of it profitable.

shaken up and down under water, and by gravity the heavier substance goes through the sieve to the bottom, the lighter forming a layer on top, which is scraped off. The Greek phrase (translated literally above) is syncopated, as is the further description of the process.

11. Not very far from Castulo is also the mountain in which the Bactis is said to rise ; it is called " Silver Mountain " on account of the silver-mines that are in it. According to Polybius, however, both this river and the Anas, though distant from each other as much as nine hundred stadia, rise in Celtiberia ; for, as a result of their growth in power, the Celtiberians caused the whole neighbouring country to have the same name as their own. The ancients seem to have called the Bactis River " Tartessus " ; and to have called Gades and the adjoining islands " Erytheia " ; and this is supposed to be the reason why Stesichorus spoke as he did about the neat-herd<sup>1</sup> of Geryon, namely, that he was born " about opposite famous Erytheia, beside the unlimited, silver-rooted springs of the river Tartessus, in a cavern of a cliff." Since the river had two mouths, a city was planted on the intervening territory in former times, it is said,—a city which was called " Tartessus," after the name of the river ; and the country, which is now occupied by Turdulians, was called " Tartessus." Further, Eratosthenes says that the country adjoining Calpe is called " Tartessus," and that Erytheia is called " Blest Isle." Eratosthenes is contradicted by Artemidorus, who says that this is another false statement of Eratosthenes, like his statement that the distance from Gades to the Sacred Cape is a five days' sail (although it is not more than one thousand seven hundred stadia), and his statement that the tides come to an end at the Sacred Cape (although the tides take place round the whole circuit of the inhabited world), and his state-

ment that the northerly parts of Iberia afford an easier passage to Celtica than if you sail thither by the ocean; and, in fact, every other statement which he has made in reliance upon Pytheas,<sup>1</sup> on account of the latter's false pretensions.

12. The poet,<sup>2</sup> man of many voices, so to speak, and of wide information, affords us grounds for the argument that even these regions were not unheard of by him, if one were only willing to argue scientifically from both statements that are made about these regions, not only from the worse, but also from the better and more truthful. Worse, namely, the statement that Tartessus was known by hearsay<sup>3</sup> as "farthermost in the west," where, as the poet himself says, falls into Oceanus "the sun's bright light, drawing black night over earth, the grain-giver." Now, that night is a thing of evil omen and associated with Hades, is obvious; also that Hades is associated with Tartarus. Accordingly, one might reasonably suppose that Homer, because he heard about Tartessus, named the farthermost of the nether-regions Tartarus after Tartessus, with a slight alteration of letters; and that he also added a mythical element, thus conserving the creative quality of poetry. Just as the poet, because he knew that the Cimmerians had taken their abode in northern and gloomy regions about the Bosphorus, settled them in the neighbourhood of Hades, though perhaps he did it also in accordance with a certain common hatred of the Ionians for this tribe (indeed, it was in the time of Homer, or shortly before his time, they say, that that Cimmerian invasion which reached as far

as Aeolis and Ionia took place). Again, the poet modelled his "Planctae"<sup>1</sup> after the "Cyaneae," always bringing in his myths from some historical fact or other. For example, he tells a mythical story of certain rocks that are dangerous, just as they say the Cyaneae are (from which fact the Cyaneae are also called "Symplegades"), and this is the reason why he cited Jason's voyage through them. But both the strait at the Pillars and that at Sicily suggested to him the myth about the Planctae. As regards that worse statement, therefore, one might get a hint from the mythical invention of Tartarus that Homer had in mind the regions about Tartessus.

13. As regards the better, on the other hand, one might get hints from the following: In the first place, the expeditions of Heracles and of the Phoenicians, since they both reached as far as Iberia, suggested to Homer that the people of Iberia were in some way rich, and led a life of ease. Indeed, these people became so utterly subject to the Phoenicians that the greater number of the cities in Turdctania and of the neighbouring places are now inhabited by the Phoenicians. Secondly, the expedition of Odysseus, as it seems to me, since it actually had been made to Iberia, and since Homer had learned about it through inquiry, gave him an historical pretext; and so he also transferred the *Odyssey*, just as he had already transferred the *Iliad*, from the domain of historical fact to that of creative art, and to that of mythical invention so familiar to the poets. For not only do the regions about Italy and Sicily and certain other regions betray signs of such facts, but in Iberia also a city of Odysseia is to be seen, and a temple of

Athene, and countless other traces, not only of the wanderings of Odysseus, but also of other wanderings which took place thither after the Trojan War and afflicted the capturers of Troy quite as much as it did the vanquished<sup>1</sup> (for the capturers, as it happened, carried off only a Cadmean victory<sup>2</sup>). And since the Trojan homes were in ruins, and the booty that came to each Greek was but small, the result was that the surviving Trojans, after having escaped from the perils of the war, turned to acts of piracy, as did also the Greeks; the Trojans, because their city was now in utter ruins; the Greeks, for shame, since every Greek took it for granted that it was "verily shameful to wait long" far from his kindred "and then" back to them "empty-handed go." Thirdly, the wanderings of Aeneas are a traditional fact, as also those of Antenor, and those of the Heneians;<sup>3</sup> similarly, also, those of Diomedes, Menelaus, Odysseus, and several others. So then, the poet, informed through his inquiries of so many expeditions to the outermost parts of Iberia, and learning by hearsay about the wealth and the other good attributes of the country (for the Phoenicians were making these facts known), in fancy placed the abode of the blest there, and also the Elysian Plain, where Proteus says Menelaus will go and make his home: "But the deathless gods will escort thee to the Elysian Plain and the ends of the earth, where is Rhadamanthys of the fair hair, where life is easiest. rain; but always Oceanus sendeth forth the breezes of clear-blowing Zephyrus." For both the pure air and the gentle breezes of Zephyrus properly belong to this country, since the country is not only in the west but also warm; and the phrase "at the ends of the earth" properly belongs to it, where Hades has been "mythically placed," as we say. And Homer's citing of Rhadamanthys suggests the region that is near Minos, concerning whom he says: "There it was I saw Minos, glorious son of Zeus, holding a golden sceptre, rendering decisions to the dead." Furthermore, the poets who came after Homer keep dinning into our ears similar stories: the expedition of Heracles in quest of the kine of Geryon and likewise the expedition which he made in quest of the golden apples of the Hesperides—even calling by name certain Isles of the Blest, which, as we know, are still now pointed out, not very far from the headlands of Maurusia that lie opposite to Gades.

14. The Phoenicians, I say, were the informants of Homer; and these people occupied the best of Iberia and Libya before the age of Homer, and continued to be masters of those regions until the Romans broke up their empire. The wealth of Iberia is further evidenced by the following facts: the Carthaginians who, along with Barcas, made a campaign against Iberia found the people in Turdetania, as the historians tell us, using silver feeding-troughs and wine-jars. And one might assume that it was from their great prosperity that the people there got the additional name of "Macraeones,"<sup>1</sup>

<sup>1</sup> "Long-livers."

and particularly the chieftains; and that this is why Anacreon said as follows: "I, for my part, should neither wish the horn of Amaltheia,<sup>1</sup> nor to be king of Tartessus for one hundred and fifty years"; and why Herodotus recorded even the name of the king, whom he called Arganthonius.<sup>2</sup> For one might either take the phrase of Anacreon literally or as meaning "a time equal to the king's," or else in a more general way, "nor to be king of Tartessus for a long time." Some, however, call Tartessus the Cartein of to-day.<sup>3</sup>

15. Along with the happy lot of their country, the qualities of both gentleness and civility have come to the Turditanians; and to the Celtic peoples, too, on account of their being neighbours to the Turdetanians, as Polybius has said, or else on account of their kinship; but less so the Celtic peoples, because for the most part they live in mere villages. The Turdetanians, however, and particularly those that live about the Bactis, have completely changed over to the Roman mode of life, not even remembering their own language any more. And most of them have become Latins,<sup>4</sup> and they have received Romans

as colonists, so that they are not far from being all Romans. And the present jointly-settled cities, Pax Augusta in the Celtic country, Augusta Emerita in the country of the Turdulians, Caesar-Augusta near Celtiberia, and some other settlements, manifest the change to the aforesaid civil modes of life. Moreover, all those Iberians who belong to this class are called "Togati."<sup>1</sup> And among these are the Celtiberians, who were once regarded the most brutish of all. So much for the Turditanians.

1. Now if we again begin at the Sacred Cape, following the coast in the other direction, namely, towards the Tagus River, there is first a gulf, then a promontory, Barbarium, and near it the mouths of the Tagus; and the distance to these mouths in a direct voyage is ten<sup>2</sup> stadia. Here, too, there are estuaries; one of them extends inland from the

<sup>1</sup> The MSS. are nearly unanimous in support of "Stolati," "wearers of the stole," but this was a matrons' garment at Rome. Cp. 3. 4. 20. Again, Dio Cassius (see note on opposite page), in speaking of Gallia Narbonensis, says that it was called "Gallia Togata," both because it was reputed to be more peaceable than the others and because the people there were already (43 B.C.) wearing the Roman garb.

<sup>2</sup> As the MSS. stand, "ten" cannot be right. Strabo probably wrote "two hundred" (or "two hundred and ten"), if he meant *from Barbarium*; or "one thousand," if *from the Sacred Cape*. The latter seems more likely, for it is inconceivable that Strabo would leave out the distance from the Sacred Cape to Barbarium and thus break his otherwise continuous circuit of distances extending all the way from the Trophies of Pompey (3. 4. 1.) to Cape Narium. See critical note on opposite page.

afore-mentioned tower<sup>1</sup> for more than four hundred stadia, and along this estuary the country is watered as far as Salacia.<sup>2</sup> Now the Tagus not only has a width of about twenty stadia at its mouth, but its depth is so great that very large merchant-ships can ascend it. And when the flood-tides come on, it forms two estuaries in the plains that lie above it, so that it forms a sea for a distance of one hundred and fifty stadia, and renders the plain navigable, and also, in the upper estuary, encloses an island about thirty stadia in length, and in breadth a trifle short of the length—an island with fine groves and vines. The island is situated opposite Moron,<sup>3</sup> a city happily situated on a mountain near the river, at a distance of about five hundred stadia from the sea. And further, not only is the country round about the city rich, but the voyages thither are easy—even for large ships a considerable part of the way, though only for the river-boats the rest of the way. And beyond Moron, also, the river is navigable for a still greater distance. This city Brutus, surnamed Callaicus,<sup>4</sup> used as a base of operations when he warred against the Lusitanians and brought these people under subjection. And, to command the bar<sup>5</sup> of the river, he fortified Olysipo, in order that the

voyages inland and the importation of provisions might be unimpeded; so that among the cities about the Tagus these are strongest. The Tagus abounds in fish, and is full of oysters. It rises in Celtiberia, and flows through Vettonia, Carpetania, and Lusitania, towards the equinoctial west,<sup>1</sup> up to a certain point being parallel to both the Anas and the Baetis, but after that diverging from those rivers, since they bend off towards the southern seaboard.

2. Now of the peoples situated beyond the mountains mentioned above,<sup>2</sup> the Oretanians are most southerly, and their territory reaches as far as the seacoast in part of the country this side of the Pillars; the Carpetanians are next after these on the north; then the Vettonians and the Vaccacans, through whose territory the Durus River flows, which affords a crossing at Aentia, a city of the Vaccacans; and last, the Callaicans, who occupy a very considerable part of the mountainous country. For this reason, since they were very hard to fight with, the Callaicans themselves have not only furnished the surname for the man who defeated the Lusitanians but they have also brought it about that now, already, the most of the Lusitanians are called Callaicans. Now as for Oretania, its city of Castalo is very powerful, and so is Oria.<sup>3</sup>

3. And yet the country north of the Tagus, Lusitania, is the greatest of the Iberian nations, and is the nation against which the Romans waged war for the longest times. The boundaries of this country are: on the southern side, the Tagus; on the

western and northern, the ocean ; and on the eastern, the countries of the Carpetanians, Vettonians, Vaccæans, and Callaicans, the well-known tribes ; it is not worth while to name the rest, because of their smallness and lack of repute. Contrary to the men of to-day, however, some call also these peoples Lusitanians. These four peoples, in the eastern part of their countries, have common boundaries, thus : the Callaicans, with the tribe of the Asturians and with the Celtiberians, but the others with only the Celtiberians. Now the length of Lusitania to Cape Nerium is three thousand stadin, but its breadth, which is formed between its eastern side and the coast-line that lies opposite thereto, is much less. The eastern side is high and rough, but the country that lies below is all plain even to the sea, except a few mountains of no great magnitude. And this, of course, is why Poseidonius says that Aristotle is incorrect in making the coast-line<sup>1</sup> and Maurusia the cause of the flood-tides and the ebb-tides ; whom he quotes as saying that the sea ebbs and flows on account of the fact that the coast-lands are both high and rugged, which not only receive the waves roughly but give them back with equal violence. For on the contrary, Poseidonius correctly says, the coast-lands are for the most part sandy and low.

4. At all events, the country of which I am speaking is fertile, and it is also traversed by rivers both large and small, all of them flowing from the eastern parts and parallel to the Tagus ; most of them offer voyages inland and contain very great quantities of gold-dust as well. Best known of the rivers immediately after the Tagus are the Mundas, which

offers short voyages inland, and likewise the Vacua. After these two is the Durius, which, coming from afar, flows by Numantia and many other settlements of the Celtiberians and Vaccaeans, and is navigable for large boats for a distance of about eight hundred stadia inland. Then come other rivers. And after these the River of Lethæ,<sup>1</sup> which by some persons is called Limacas, but by others Belion;<sup>2</sup> and this river, too, rises in the country of the Celtiberians and the Vaccaeans, as also does the river that comes after it, namely the Baenis (others say "Minus"), which is by far the greatest of the rivers in Lusitania—itself, also, being navigable inland for eight hundred stadia. Poseidonius, however, says that the Baenis rises in Cantabria. Off its mouth lies an island, and two breakwaters which afford anchorage for vessels. The nature of these rivers deserves praise, because the banks which they have are high, and adequate to receive within their channels the sea at high tide without overflowing or spreading over the plains. Now this river was the limit of Brutus' campaign, though farther on there are several other rivers, parallel to those mentioned.

5. Last of all come the Artabrians, who live in the neighbourhood of the cape called Nerium, which is the end of both the western and the northern side of Iberia. But the country round about the cape itself is inhabited by Celtic people, kinsmen of those on the Anas; for these people and the Turdulians made an expedition thither and then had a quarrel, it is said, after they had crossed the Limacas River; and when, in addition to the quarrel, the Celtic peoples also suffered the loss of their chieftain, they scattered and stayed there; and it was from this

The *Artabrians* have many thickly-peopled cities on that gulf which the sailors who frequent those parts call the Harbour of the *Artabrians*. The men of to-day, however, call the *Artabrians* *Arotrebianz*. Now about thirty<sup>1</sup> different tribes occupy the country between the *Tagus* and the *Artabrians*, and although the country was blest in fruits, in cattle, and in the abundance of its gold and silver and similar metals, still, most of the people had ceased to gain their livelihood from the earth, and were spending their time in brigandage and in continuous warfare both with each other and with their neighbours across the *Tagus*, until they were stopped by the *Romans*, who humbled them and reduced most of their cities to mere villages, though they improved some of their cities by adding colonies thereto. It was the mountaineers who began this lawlessness, as was likely to be the case; for, since they occupied sorry land and possessed but little property, they coveted what belonged to the others. And the latter, in defending themselves against the mountaineers, were necessarily rendered powerless over their private estates, so that they, too, began to engage in war instead of farming; and the result was that the country, neglected because it was barren of planted products, became the home only of brigands.

<sup>1</sup> Not "eating only one kind of food" (Stephannus' *Thesaurus*, Liddell and Scott, and elsewhere). Athenaeus (2. 21) quotes Phylarchus as saying that "the Iberians always eat only one meal a day." Cp. also Xen. *Cyropaedia* 8. 8. 9. in front, and suspended from the shoulder by means of thongs (for it has neither arm-rings nor handles). Besides these shields they have a dirk or a butcher's-knife. Most of them wear linen cuirasses; a few wear chain-wrought cuirasses and helmets with three crests, but the rest wear helmets made of sinews. The foot-soldiers wear greaves also, and each soldier has several javelins; and some also make use of spears, and the spears have bronze heads. Now some of the peoples that dwell next to the Durus River live, it is said, after the manner of the Laconians—using anointing-rooms twice a day and taking baths in vapours that rise from heated stones, bathing in cold water, and eating only one meal a day;<sup>1</sup> and that in a cleanly<sup>2</sup> and simple way. The Lusitanians are given to offering sacrifices, and they inspect the vitals, without cutting them out. Besides, they also inspect the veins on the side of the victim; and they divine by the tokens of touch, too. They prophesy through means of the vitals of human beings also, prisoners of war, whom they first cover with coarse cloaks, and then, when the victim has been struck beneath the vitals by the diviner, they draw their first auguries from the fall of the victim. And they cut off the right hands of their captives and set them up as an offering to the gods.

7. All the mountaineers lead a simple life, are water-drinkers, sleep on the ground, and let their hair stream down in thick masses after the manner of women, though before going into battle they bind their hair about the forehead. They eat goat's-meat mostly, and to Ares they sacrifice a he-goat and also

the prisoners and horses; and they also offer hecatombs of each kind, after the Greek fashion—as Pindar himself says, “to sacrifice a hundred of every kind.” They also hold contests, for light-armed and heavy-armed soldiers and cavalry, in boxing, in running, in skirmishing, and in fighting by squads. And the mountaineers, for two thirds of the year, eat acorns, which they have first dried and crushed, and then ground up and made into a bread that may be stored away for a long time. They also drink beer; but they are scarce of wine, and what wine they have made they speedily drink up in merry feastings with their kinsfolk; and instead of olive-oil they use butter. Again, they dine sitting down, for they have stationary seats builded around the walls of the room, though they seat themselves forward according to age and rank. The dinner is passed round, and amid their cups they dance to flute and trumpet, dancing in chorus, but also leaping up and crouching low. But in Bastetania women too dance promiscuously with men, taking hold of their hands. All the men dress in black, for the most part in coarse cloaks, in which they sleep, on their beds of litter. And they use waxen vessels, just as the Celts do.<sup>1</sup> But the women always go clad in long mantles and gay-coloured gowns. Instead of coined money the people, at least those who live deep in the interior, employ barter, or else they cut off pieces from beaten silver metal and pass them as money. Those who are condemned to death they hurl from precipices; and

editors have variously emended the Greek word for “waxen”: to “wooden,” “earthen,” “plaited,” and “made of horna.” But see the translator’s note in *Classical Quarterly*, London, April, 1917, pp. 132-134,

<sup>2</sup> Since this custom was followed by the Assyrians (Herodotus 1. 197 and Strabo 16. 1. 20), and since there is no other account of such a practice among the Egyptians, some of the editors have presumed to emend the text, perhaps rightly.

the parricides they stone to death out beyond their mountains or their rivers. They marry in the same way as the Greeks. Their sick they expose upon the streets, in the same way as the Egyptians<sup>1</sup> did in ancient times, for the sake of their getting suggestions from those who have experienced the disease. Again, up to the time of Brutus<sup>2</sup> they used boats of tanned leather on account of the flood-tides and the shoal-waters, but now, already, even the dug-out canoes are rare. Their rock-salt is red, but when crushed it is white. Now this, as I was saying, is the mode of life of the mountaineers, I mean those whose boundaries mark off the northern side of Iberia, namely, the Callaicans, the Asturians, and the Cantabrians, as far as the Vasconians and the Pyrenees; for the modes of life of all of them are of like character. I shrink from giving too many of the names, shunning the unpleasant task of writing them down—unless it comports with the pleasure of some one to hear "Plautaurans," "Bardytans," "Allotrigans," and other names still less pleasing and of less significance than these.

8. The quality of intractability and wildness in these peoples has not resulted solely from their engaging in warfare, but also from their remoteness; for the trip to their country, whether by sea or by land, is long, and since they are difficult to communicate with, they have lost the instinct of sociability and humanity. They have this feeling of intractability and wildness to a less extent now, however, because of the peace and of the sojourns of the Romans among them. But wherever such

sojourns are rarer the people are harder to deal with and more brutish; and if some are so disagreeable merely as the result of the remoteness of their regions, it is likely that those who live in the mountains are still more outlandish. But now, as I have said, they have wholly ceased carrying on war; for both the Cantabrians (who still to-day more than the rest keep together their bands of robbers) and their neighbours have been subdued by Augustus Caesar; and instead of plundering the allies of the Romans, both the Coniacans<sup>1</sup> and the Plentuisans,<sup>2</sup> who live near the source of the Iberus, now take the field for the Romans. Further, Tiberius, his successor, has set over these regions an army of three legions (the army already appointed by Augustus Caesar), and it so happens that he already has rendered some of the peoples not only peaceable but civilised as well.

1. There remains of Iberia the seaboard of Our Sea from the Pillars to the Pyrenees Mountains, and also the whole of the interior above it, which is unequal in breadth but slightly more than four thousand stadia in length, though the length of the seaboard has been given as still greater than that by as much as two thousand stadia. They say that the distance from Calpe, the mountain near the Pillars, to New Carthage is two thousand two hundred stadia; and this coast is inhabited by Bastetanians, who are also called Bastulians, and,

in part, by Oretanians also; thence to the Iberus is another distance of about the same number of stadia, and this coast is occupied by Edetanians; and thence, this side the Iberus, to the Pyrenees and the Trophies of Pompey<sup>1</sup> is a coast of sixteen hundred stadia, which is inhabited by a few of the Edetanians, and also, for the rest of the way, by the peoples called Indictans, who have been divided into four tribes.

2. In detail: if we begin from Calpe, we have a mountain-chain belonging to Bastetania and to the Oretanians, which has dense forests of tall trees, and separates the coast from the interior. Here also, in many places, there are mines of gold and other metals. The first city on this coastline is Malaca, which is as far distant from Calpe as Gades is; it is now an emporium for the Nomads on the opposite coast,<sup>2</sup> and it also has great establishments for salting fish. Some regard Malaca as identical with Maenaca,<sup>3</sup> which, as we have been taught, lies farthest of the Phocæan cities in the west; but this is not true. On the contrary, the city of Maenaca is farther away from Calpe, and is now in ruins (though it still preserves the traces of a Greek city), whereas Malaca is nearer, and bears the stamp of a Phœnician city. Next thereafter comes the city<sup>4</sup> of the Exitanians, after which the salted fish take their trade name.

3. After this city comes Abdera, which is itself a place founded by the Phœnicians. Beyond the regions in question, in the mountain country,

<sup>1</sup> Siebenkoes is probably right in emending Ὠψικέλλα to Ὀκέλλαν and Ὀκέλα to Ὀκέλλα; so, in general, the later editors read. Strabo apparently has in mind the Ὀκέλλον (or Ὀκέλον) of Ptolemaeus (2. 5. 7); cp. the Ocellenses of Pliny (4. 35).

Odysseia is to be seen, and in it the temple of Athene, as has been stated by Poseidonius, Artemidorus, and Asclepiades the Myrlean, a man who taught grammar in Turdetania and has published an account of the tribes of that region. According to Asclepiades, shields and ships' beaks have been nailed up in the temple of Athene as memorials of the wanderings of Odysseus; and some of those who made the expedition with Teucer lived in Callaicia, and there were once two cities there, of which one was called Hellenes,<sup>1</sup> and the other, Amphiloichi;<sup>2</sup> for not only did Amphiloehus die at the place, but his companions wandered as far as the interior of the country. And, he further says, history tells us that some of the companions of Heracles and of the emigrants from Messene colonised Iberia. As for Cantabria, a part of it was seized and held by the Laeonians, according to both Asclepiades and others. Here, too, they mention a city Opsicella, founded by Ocelas, who in company with Antenor and his children crossed over to Italy. Furthermore, in the case of Libya, some have believed, giving heed to the merchants of Gades (as Artemidorus has already stated), that the people who live beyond Maurusia next to the Western Ethiopians are called Lotus-eaters because they feed on lotus (a sort of plant and root) and do not need drink, or have any, either, since there is no water in their entire country, although it stretches even as far as the regions of Cyrene. And there is still another people called

4. So no one could be surprised if, in the first place, the poet<sup>2</sup> has written his mythical account of the wanderings of Odysseus in such a way as to set most of his stories of Odysseus in the Atlantic Sea beyond the Pillars of Heracles (for the stories he told were so closely related to the facts, both in respect of places and of everything else created by his fancy, that he rendered his fiction not unplausible); nor surprised if, in the second place, some men, having believed in these stories themselves and also in the wide learning of the poet, have actually turned the poetry of Homer to their use as a basis of scientific investigations, as has been done by Crates of Mallos and certain others as well. Other men, however, have greeted all attempts of that sort with such ferocity that they not only have cast out the poet, as though he were a mere ditch-digger or harvest-labourer, from the whole field of scientific knowledge of this kind, but also have supposed to be madmen all who have taken in hand such a task as that; but as for introducing any defence, or revision, or anything else of the kind, for the assertions of those men,<sup>3</sup> no one either among the grammarians or the scientific experts has ventured to do so. And yet, to me at least, it seems to be possible not only to defend many of their assertions, but to bring them under revision, and in particular all those wherein Pytheas has led astray those men who, in ignorance both of the regions in the west and of those in the north along the ocean, have believed him. But let us pass by these matters, since they involve a special and lengthy discussion.

## GEOGRAPHY, 3. 4. 5-6

5. Now the wanderings of the Greeks to the barbarian nations might be regarded as caused by the fact that the latter had become split up into petty divisions and sovereignties which, on the strength of their self-sufficiency, had no intercourse with one another; and hence, as a result, they were powerless against the invaders from abroad. This spirit of self-sufficiency, among the Iberians I mean, was particularly intense, since by nature they had already received both the quality of knavery and that of insincerity. For by their modes of life they became inclined to attack and to rob, venturing only upon petty undertakings, and never throwing themselves into large ones, because they would not establish large forces and confederations. For surely, if they had been willing to be shield-fellows with one another, it would not have been possible, in the first place, for the Carthaginians to overrun and subdue the most of their country by superiority of forces, or in still earlier times for the Tyrians to do so, or after that, for those Celti who are now called Celtiberians and Veronians; nor, in the second place, later on, for the brigand Viriathus, or for Sertorius, or for any others who may have coveted wider dominion. And the Romans, since they carried on merely a piecemeal war against the Iberians, attacking each territory separately, spent some considerable time in acquiring dominion here, subjecting first one group and then another, until, after about two hundred years or longer, they got them all under control. But I return to my geographical description.

6. After Abdera, then, comes New Carthage, which was founded by Hasdrubal, the successor of

Barcas, the father of Hannibal. New Carthage is by far the most powerful of all the cities in this country, for it is adorned by secure fortifications, by walls handsomely built, by harbours, by a lake, and by the silver mines of which I have spoken. And here, as well as at the places near by, the fish-salting industry is large. Furthermore, New Carthage is a rather important emporium, not only of the imports from the sea for the inhabitants of the interior, but also of the exports from the interior for all the outside world. On the coast from New Carthage up to the Iberus, about midway between these two points, are the Sucro River and its mouth, and a city with the same name as the river. The river rises in the mountain which connects with the mountain-chain that lies beyond Malaca and the regions about New Carthage; it can be waded, runs about parallel to the Iberus, and is slightly less distant from New Carthage than from the Iberus. Now between the Sucro River and New Carthage, not far from the river, there are three small Massiliote<sup>1</sup> cities. Of these, the best known is Hemeroscopeium,<sup>2</sup> a place held in very great esteem, since it has on its promontory a temple of the Ephesian Artemis; and it was used by Sertorius as a naval base. For it is a natural stronghold and adapted to piracy, and is visible at a considerable distance to the approaching sailors. It is also called "Dianium," the equivalent<sup>3</sup> of "Artemisium"; it has iron mines with fine deposits near by, and small islands, Planesia and Plumbaria, and above it a lagoon of salt-water four hundred stadia in circuit. Next,

<sup>1</sup> The word means "Day-watch."

and quite near to New Carthage, comes the Island of Heracles, which they call Scombraria, from the scomber-fish caught there, from which the best fish-sauce is prepared. It is twenty-four stadia distant from New Carthage. And again, on the other side of the Sucro, as you go towards the mouth of the Iberus, is Saguntum, founded by Zacynthians, which Hannibal destroyed despite his treaty with the Romans, thereby kindling the second war against the Carthaginians. Near Saguntum are the cities of Cherroneus, Olenstrum, and Cartaius; and at the very crossing of the Iberus is the settlement of Dertossa. The course of the Iberus, which rises in Cantabria, is southwards through a great plain and parallel to the Pyrenees Mountains.

7. Between where the Iberus turns out seaward and the heights of the Pyrenees, on which are situated the Trophies set up by Pompey, the first city is Tarraco. It has no harbour, indeed, but it is situated on a bay and is adequately supplied with all other advantages; and at present it is not less populous than New Carthage. Indeed, it is naturally suited for the residence of the Prefects, and is a metropolis, as it were, not only of the country this side the Iberus, but also of the greater part of the country beyond the Iberus. And the Gymnesian Islands, which lie near by off the coast, and Ebusus,<sup>1</sup> all noteworthy islands, suggest that the position of the city is a happy one. Eratosthenes says that the city has also a roadstead, although, as Artemidorus, contradicting him, has already stated, it is not particularly blessed even with places of anchorage.

8. Further, the whole coastline from the Pillars to Tarraco has few harbours, but from Tarraco on, all the way to Emporium, the coasts have fine harbours, and the country is fertile, both that of the Leëtanians and the Lartolacëtans, and of other such peoples. Emporium was founded by the people of Massilia; it is about two hundred<sup>1</sup> stadia distant from the Pyrenees and from the common boundary between Iberia and Celtica, and this coast too, all of it, is fertile and has good harbours. Here, too, is Rhodus, a small town belonging to the Emporitans, though some say it was founded by Rhodians. Both in Rhodus and in Emporium they worship Artemis of the Ephesians, and I shall tell the reason for this in my account of Massilia.<sup>2</sup> The Emporitans formerly lived on a little island off the shore, which is now called Old City,<sup>3</sup> but they now live on the mainland. And their city is a double one, for it has been divided into two cities by a wall, because, in former times, the city had for neighbours some of the Indicetans, who, although they maintained a government of their own, wished, for the sake of security, to have a common wall of circumvallation with the Greeks, with the enclosure in two parts—for it has been divided by a wall through the centre; but in the course of time the two peoples united under the same constitution, which was a mixture of both Barbarian and Greek laws—a thing which has taken place in the case of many other peoples.

its source in the Pyrenees; and its outlet serves as a port for the Emporitans. The Emporitans are quite skilful in flax-working. As for the inland territory which they hold, one part of it is fertile, while the other produces the spart of the rather useless, or rush, variety; it is called "Juncarian" Plain.<sup>1</sup> But some of the Emporitans occupy even some of the heights of the Pyrenees, as far as the Trophies that were set up by Pompey, past which runs the road from Italy to what is called "Farther" Iberin, and in particular to Baetica. This road sometimes approaches the sea, though sometimes it stands off at a distance from the sea, and particularly in the regions on the west. It runs towards Tarraco from the Trophies that were set up by Pompey, through the Juncarian Plain and through Veteres<sup>2</sup> and what in the Latin tongue is called Fennel Plain, because it produces so much fennel.<sup>3</sup> From Tarraco it runs towards the passage of the Iberus at the city of Dertossa; thence, after passing through Saguntum and the city of Setabis, it gradually departs from the sea and joins what is called the Spartarian—or, as we should say, "Rush"—Plain.<sup>4</sup> This plain is large and has no water, but produces the kind of spart that is suitable for twisting into ropes, and is therefore exported to all regions, and particularly to Italy. Now formerly the road must have passed through the centre of this plain and through Ege-lasta, a road rough and long, but at the present day

<sup>1</sup> Literally, the Greek is: "Plain of Marathon, . . . marathon." Strabo avoids transliterating "Fenicularius" (the term actually used by the Romans) into Greek.

<sup>4</sup> The Romans called it "Campus Spartarius."

they have made it run towards the coastal regions, merely touching upon the Rush Plain, yet leading to the same place as did the former road, namely, to the regions round about Castulo and Obulco; and through these cities the road runs to Corduba and Gades, the greatest of the trading-places. The distance from Corduba to Obulco is about three hundred stadia. The historians say that Caesar went from Rome to Obulco and the camp there in twenty-seven days, when he was about to engage in the battle near Munda.

10. Such, then, is the character of the whole seaboard from the Pillars up to the common boundary of Iberia and Celtica. The interior country that lies beyond the seaboard (I mean the country enclosed by the Pyrenees Mountains and the northerly side of Iberia as far as Asturia) is divided by two mountain-ranges, speaking roughly. Of these mountains, one is parallel to the Pyrenees, beginning in Cantabria and ending at Our Sea (they call this mountain Idubeda); whereas the other, beginning at the centre of the first one, stretches towards the west, though it inclines towards the south and the coastline that runs from the Pillars. This latter mountain is at first a mere hill and bare of trees, and passes through the so-called Spartarian Plain; then it joins the forest that lies beyond both New Carthage and the regions round about Malaca; it is called Orospea. It is between the Pyrenees and Idubeda, then, that the Iberus River flows, which is parallel with both mountains and is filled by the rivers and the other waters that pour down from them. On the Iberus is a city called Caesar Augusta; also Celsa, a colonial settlement, where there is a

stone bridge across the river. This country is jointly settled by several tribes, though the best known is what is called the tribe of the Iaccetanians. Their country begins at the foothills of the Pyrenees and then broadens out over the plains and joins the districts round about Ilerda and Osca, that is, the districts which belong to the Ilergetans, not very far from the Iberus. It was in these two cities, and in Calaguris (a city of the Vasconians), and in the two cities of Tarraco and Hemeroscopium on the coast, that Sertorius fought his last battles after his expulsion from Celtiberia; but it was at Osca that he came to his end.<sup>1</sup> And it was in Ilerda that Afranius and Petreius, the generals of Pompey, were defeated in battle later on by the Deified Caesar.<sup>2</sup> Ilerda is distant from the Iberus one hundred and sixty stadia, to a man travelling approximately towards the west; from Tarraco, on the south, about four hundred and sixty stadia; from Osca, on the north, five hundred and forty stadia. Through these districts runs the road from Tarraco to those outermost Vasconians on the ocean who live about Pompelo, and about the city of Oeaso, which is at the ocean itself—a road of two thousand four hundred stadia, reaching to the very frontier of Aquitania and Iberia. Iaccetania

<sup>1</sup> The Greek MSS. all read "of disease" instead of "at Osca." The emendation is certainly right, since we know that Sertorius was assassinated at Osca (cp. Velleius Paterculus 2. 30, and Plutarch's *Life of Sertorius*).

<sup>2</sup> Literally, "the god"; Strabo's attempt to translate the Latin adjective "divus" ("divine," hence "deified") into Greek. The epithet "divus" was regularly applied to the deceased emperors; here, of course, Julius Caesar is meant.

is the country where not only Sertorius carried on war in his day against Pompey, but also, later on, Sextus, the son of Pompey, against the generals of Caesar. It is beyond Iaccetania, towards the north, that the tribe of the Vasconians is situated, where there is a city Pompelo or, as one might say, Pompeiopolis.

11. As for the Pyrenees themselves, the Iberian side is well-wooded with trees of every kind and with evergreens; whereas the Celtic side is bare, although the central portions of it encompass glens that are capable of affording a good livelihood. These glens are occupied mostly by Carretanians, of the Iberian stock; and among these people excellent hams are cured, rivalling those of Cantabria, and affording the people no small revenue.

12. Crossing over the Idubeda Mountain, you are at once in Celtiberia, a large and uneven country. The greater part of it in fact is rugged and river-washed; for it is through these regions that the Anas flows, and also the Tagus, and the several rivers next to them, which, rising in Celtiberia, flow down to the western sea. Among these are the Durus, which flows past Numantia and Serguntia, and the Bactis, which, rising in the Orospeđa, flows through Oretania into Baetica. Now, in the first place, the parts to the north of the Celtiberians are the home of the Veronians, neighbours of the Cantabrian Coniscans, and they too<sup>1</sup> have their origin in the Celtic expedition; they have a city, Varia, situated at the crossing of the Iberus; and their

territory also runs contiguous to that of the Bardyets, whom the men of to-day call Bardulians. Secondly, the parts on the western side are the home of some of the Asturians, Callaicans, and Vaccaeans, and also of the Vettonians and Carpetanians. Thirdly, the southern parts are the home, not only of the Oretanians, but of all other tribes of those Bastetanians and Edetanians that live on the Orospeđa. And fourthly, on the east lies the Idubeda.

13. Again, of the four divisions into which the Celtiberians have been separated, the most powerful, generally speaking, are the Arvacans, who live on the east and south, where their territory joins Carpetania and the sources of the Tagus; and they have a city of very great renown, Numantia. They gave proof of their valour in the Celtiberian War against the Romans, which lasted for twenty years; indeed, many armies, officers and all, were destroyed by them, and at the last the Numantians, when besieged, endured till death, except a few who surrendered the fortress. The Lusonians, likewise, live in the east, and their territory, too, joins the sources of the Tagus. The cities of Segeda and Pallantia both belong to the Arvacans. The distance of Numantia from Caesar Augusta, which latter, as I was saying, is situated on the Iberus, is as much as eight hundred stadia. The cities of Segobriga and Bilbilis both belong to the Celtiberians, and it is near these cities that Metellus and Sertorius had their war. Polybius, in detailing the tribes and districts of the Vaccaeans and the Celtiberians, includes with the rest of the cities both Segesama and Intercatia. Poseidonius says that

## GEOGRAPHY, 3. 4. 13-14

Marcus Marcellus exacted a tribute of six hundred talents from Celtiberia, from which it may be inferred that the Celtiberians were rich as well as numerous, albeit the country they live in is rather poor. But because Polybius went on to say that Tiberius Gracchus destroyed three hundred cities in Celtiberia, Posidonius makes fun of him, saying that the men did this merely to gratify Gracchus, for he called the towers cities just as they do in the triumphal processions. And perhaps this remark of Posidonius is not to be discredited, for not only generals but historians as well are easily led to indulge in such falsification as this, in trying to embellish the deeds they describe. In fact, even those who assert that there are more than one thousand cities in Iberia seem to me to be led to do so by calling the big villages cities; for, in the first place, the country is naturally not capable, on account of the poverty of its soil or else on account of the remoteness or wildness of it, of containing many cities, and, secondly, the modes of life and the activities of the inhabitants (apart from those who live on the seaboard of Our Sea) do not suggest anything of the kind; for those who live in villages are wild (and such are most of the Iberians), and even the cities themselves cannot easily tame their inhabitants when these are outnumbered by the folk that live in the forests for the purpose of working mischief upon their neighbours.

14. Next after the Celtiberians, on the south, are the people who live in the Orospeđa Mountain and in the country round about the Suero River, namely, the Edetanians, who extend as far as New Carthage; and then the Bastetanians and the Oretanians, who extend almost as far as Malaca.

## GEOGRAPHY, 3. 4. 15-16

15. The Iberians were once, virtually all of them, peltasts, and wore light armour on account of their brigand life (as I said<sup>1</sup> of the Lusitanians), using javelin, sling, and dirk. And intermingled with their forces of infantry was a force of cavalry, for their horses were trained to climb mountains, and, whenever there was need for it, to kneel down promptly at the word of command. Iberia produces many deer and wild horses. In places, also, its marshes teem with life; and there are birds, swans and the like; and also bustards in great numbers. As for beavers, the rivers produce them, but the castor from these heavers does not have the same efficacy as that from the beavers of the Pontus; for the medicinal quality of the castor from the Pontus is peculiar to it, as is the case with qualities in many other things. For instance, says Poseidonius, the copper of Cyprus is the only copper which produces calamine and chalcanthite and spodium. And it is peculiar to Iberia, according to Poseidonius, that the crows are black there and also that the slightly dappled horses of Celtiberia change their colour when they are brought over to Farther Iberia. The Celtiberian horses are like those of Parthia, he says, for not only are they faster but they are also smoother runners than the other horses.

16. Iberia also produces quantities of those roots that are useful for dyeing. As for olive-trees, grape-vines, fig-trees, and the similar plants, the Iberian coast on Our Sea is richly supplied with them all, as is also a great part of the outer coasts.<sup>2</sup> But the ocean-coast on the north has none on account of the cold, and, for the most part, the rest of the ocean-coast has none on account of the slovenly

character of the people and the fact that they live on a low moral plane—that is, they have regard, not for rational living, but rather for satisfying their physical needs and bestial instincts—unless some one thinks those men have regard for rational living who bathe with urine which they have aged in cisterns, and wash their teeth with it, both they and their wives, as the Cantabrians and the neighbouring peoples are said to do.<sup>1</sup> But both this custom and that of sleeping on the ground the Iberians share with the Celts. Some say the Callaicians have no god, but the Celtiberians and their neighbours on the north offer sacrifice to a nameless god at the seasons of the full moon, by night, in front of the doors of their houses, and whole households dance in chorus and keep it up all night. The Vettonians, when they visited the camp of the Romans for the first time, upon seeing some of the officers promenading up and down the streets merely for the sake of walking around, supposed they were crazy and proceeded to lead the way for them to the tents, thinking they should either remain quietly seated or else be fighting.

17. One might also class as barbaric in character the ornaments of some of the women, of which Artenuidorus has told us. In some places, he says, they wear round their necks iron collars which have curved rods that bend overhead and project far in front of their foreheads; and at will they draw their veil down over these curved rods, so that the veil, thus spread out, furnishes a sunshade for the face; and all this they consider an ornament. In other places, he says, the women wear round their heads a "tympanium,"<sup>2</sup> rounded to the back of the head,

πρὸς μὲν τῷ ἰνίῳ περιφερές, καὶ σφίγγον τὴν κεφαλὴν μέχρι τῶν παρωτίδων, εἰς ὕψος δὲ καὶ πλάτος ἐξυπτιασμένον κατ' ὀλίγον· ἄλλας δὲ τὰ προκόμια ψιλοῦν ἐπὶ τοσοῦτον ὥστ' ἀποστίλβειν τοῦ μετώπου μᾶλλον· τὰς δ' ὅσον ποδιαῖον τὸ ὕψος ἐπιθεμένας στυλίσκον περιπλέκειν αὐτῷ τὴν χαίτην, εἴτα καλύπτρα μελαίνῃ περιστέλλειν. πρὸς δὲ τῇ ἀληθείᾳ τῇ τοιαύτῃ πολλὰ καὶ ἐώραται καὶ μεμύθευται περὶ πάντων κοινῇ τῶν Ἰβηρικῶν ἔθνων, διαφερόντως δὲ τῶν προσβόρρων, οὐ μόνον τὰ πρὸς ἀνδρείαν ἀλλὰ καὶ τὰ πρὸς ὠμότητα καὶ ἀπόνοιαν θηριώδη· καὶ γὰρ τέκνα μητέρας ἔκτειναν πρὶν ἀλῶναι κατὰ τὸν πόλεμον τὸν ἐν Καντάβροις, καὶ παιδίον δὲ δεδεμένων αἰχμαλώτων τῶν γονέων καὶ ἀδελφῶν ἔκτεινε πᾶντας, κελεύσαντος τοῦ πατρός, σιδήρου κυριεύσαν, γυνὴ δὲ τοὺς συναλόντας· κληθεὶς δὲ τις εἰς μεθυσκομένους ἔβαλεν αὐτὸν εἰς πυράν. κοινὰ δὲ καὶ ταῦτα πρὸς τὰ Κελτικὰ ἔθνη καὶ τὰ Θράκια καὶ Σκυθικά, κοινὰ δὲ καὶ τὰ πρὸς ἀνδρείαν τὴν τε

<sup>1</sup> That is, the cap, which fits closely the back of the head, gradually spreads out from the head at the top and sides (that is, at the front, all the way from ear to ear) and thus forms a sort of sun-bonnet (cp. Tozer, *Selections from Strabo*, p. 104). The whole head-dress suggests the shape of a kettle-drum, and hence the name. But the Greek here is so incomplete and obscure that Artemidorus may have meant either (1) a cylindrical head-dress, which, as it rises to its top, gradually spreads out in breadth (the head-dress worn at Constantinople in the Byzantine Empire and also called in Greek "tympanium"), or (2) a sort of turban, which covers and fits the hair tightly and spreads out over the top and round the head—just such an improvised head-dress as the

and, as far as the ear-lobes, binding the head tightly, but gradually turned back at the top and sides;<sup>1</sup> and other women keep the hair stripped<sup>2</sup> from the forepart of the head so closely that it glistens more than the forehead does; and still other women put a rod about a foot high on the head, twist the hair round the rod, and then drape it with a black veil. And besides the true reports of this sort, many other things have not only been seen but also narrated with fictitious additions about all the Iberian tribes in common, but especially the northerners—I mean not only the stories relating to their courage but also those relating to their ferocity and bestial insensibility.<sup>3</sup> For instance, at the time of the Cantabrian War<sup>4</sup> mothers killed their children before being taken captive; and even a small boy, whose parents and brothers were in fetters as captives of war, gained possession of a sword and, at the command of his father, killed them all; and a woman killed all her fellow captives; and a certain Cantabrian, upon being summoned into the presence of drunken men,<sup>5</sup> threw himself upon a pyre. But these traits too are shared in common by them with the Celtic as also with the Thracian and Scythian tribes; and

negro working-women in the Southern States of America often wear to-day.

<sup>1</sup> Apparently not by cutting, but by plucking or by some destructive agent (cp. Theophrastus, *Hist. Plant.* 9. 20. 3).

<sup>2</sup> That is "insensibility to suffering," or, perhaps better, "contempt for suffering." The same trait is again mentioned by Strabo in § 18.

<sup>4</sup> The Cantabrians were subjugated by Augustus in 25 B.C., but they had to be reconquered (by Agrippa) in 19 B.C. Cp. "*Cantabrum indoctum iuga ferre nostra*" (Horace, *Carmina*, 2. 6. 3).

in common also the traits relating to courage—] mean the courage of women as well as of men. For example, these women till the soil, and when they have given birth to a child they put their husbands to bed instead of going to bed themselves and minister to them;<sup>1</sup> and while at work in the fields, oftentimes, they turn aside to some brook, give birth to a child, and bathe and swaddle it. Poseidonius says that in Liguria his host, Charmoleon, a man of Massilia, narrated to him how he had hired men and women together for ditch-digging; and how one of the women, upon being seized with the pangs of childbirth, went aside from her work to a place near by, and, after having given birth to her child, came back to her work at once in order not to lose her pay; and how he himself saw that she was doing her work painfully, but was not aware of the cause till late in the day, when he learned it and sent her away with her wages; and she carried the infant out to a little spring, bathed it, swaddled it with what she had, and brought it safely home.

18. Nor yet is the following custom peculiar to the Iberians alone: they ride double on horseback, though in the time of battle one of the two fights on foot; nor the especially great number of the mice,<sup>2</sup> from which pestilential diseases have often ensued. This was so much the case for the Romans in Cantabria that, although a proclamation was made that mice-catchers would gain bounties graded in proportion to the number caught, the Romans could barely come through with their lives; and, besides the plague, there was a scarcity, not only of other stuffs, but of grain too; and only with difficulty could they

<sup>2</sup> Apparently one of the wild members of the parsley family (Apiaceae), i. e. fool's parsley (*Aethusa cynapium*), poison hemlock (*Conium maculatum*), or water hemlock (*Cicuta maculata*); more likely, poison hemlock. But perhaps the herb should be identified with that deadly Sardinian herb which Pausanias (10. 17) says is "like parsley," namely, colery-leaved, or marsh, crowfoot (*Ranunculus aceleratus*; see Dioscorides, *de Mat. Med.* 2. 206), and called by the Greeks "wild parsley." This Sardinian herb produced a convulsive laughter, with a drawing down of the angles of the mouth (Nolinus, *Collect. Rarum Memor.* 4. 4., Mommsen's ed., p. 51), and ended fatally, with the proverbial "Sardonian smile" (Pausanias, l. c.) on the victim's face.

<sup>3</sup> The Celtiberians deemed it an unholy act for a "devoted"

get supplies out of Aquitania on account of the rough roads. As for the insensibility<sup>1</sup> of the Cantabrians, this instance is also told, namely, that when some captive Cantabrians had been nailed on their crosses they proceeded to sing their paean of victory. Now such traits as these would indicate a certain savageness; and yet there are other things which, although not marks of civilisation perhaps, are not brutish; for instance, it is the custom among the Cantabrians for the husbands to give dowries to their wives, for the daughters to be left as heirs, and the brothers to be married off by their sisters. The custom involves, in fact, a sort of woman-rule—but this is not at all a mark of civilisation. It is also an Iberian custom habitually to keep at hand a poison, which is made by them out of an herb that is nearly like parsley and painless,<sup>2</sup> so as to have it in readiness for any untoward eventuality; and it is an Iberian custom, too, to devote their lives to whomever they attach themselves, even to the point of dying for them.<sup>3</sup>

person to survive his master (Valerius Maximus 2. 6. 11). Thousands of Iberians were "devoted" to Sertorius (Plutarch *Sertorius* 14); Valerius Maximus (7. 6) gives an account of the revolting acts they committed in their loyalty to Sertorius in the defence of Calaguris; and Henry Swinburne (*Travels through Spain in 1775 and 1776*, Ninth Letter) quotes from the annals of Catalonia the following epitaph to them: "Hic multae quas se manibus Q. Sertorii turmae, et terrae Mortalium omnium parenti Devovere, dum, eo sublato, Superasse caederet et fortiter Pugnando invicem cecidere, Morte ad praesens optata jacent. Valetate posteri." And Adiatunnus, king of the Sotiates in Aquitania, had 600 "devoted" men, who, in the Celtic language, were called "solduril," according to Caesar (*Bell. Gall.* 3. 22) or, according to Athenaeus (6. 54), "siloduri," which word, Athenaeus says, means in Greek "men under a vow."

19. Now although some assert that this country<sup>1</sup> has been divided into four divisions, as I have already stated,<sup>2</sup> others say it has five divisions. But it is impossible, in this case, for us to represent a division that is scientifically accurate, because of the changes which have taken place and the disrepute of the regions. For it is only in the case of the well-known and reputable regions that the migrations, the divisions of the country, the changes in the names, and everything else of that kind, are well known. Indeed, our ears are filled with these things by many, and particularly by the Greeks, who have come to be the most talkative of all men. But as for all the nations that are barbarian and remote, as well as small in territory and split up,<sup>3</sup> their records are neither safe to go by nor numerous; and as for all the nations, of course, that are far off from the Greeks, our ignorance is still greater. Now although the Roman historians are imitators of the Greeks, they do not carry their imitation very far; for what they relate they merely translate from the Greeks, while the fondness for knowledge that they of themselves bring to their histories is inconsiderable; hence, whenever the Greeks leave gaps, all the filling in that is done by the other set of writers is inconsiderable—especially since most of the very famous names are Greek. Take, for example, even Iberia: the historians of former times, it is said, give the name of Iberia to all the country beyond the Rhodanus and that isthmus which is

<sup>1</sup> Celtiberia.

<sup>1</sup> They could have used "Iberia" thus only in a general sense for "Hispania," it seems. Very little was known of the interior of the country until the second century B.C., and at that time, according to Polybius (3. 37), it was only the country along the Mediterranean south of the Pyrenees as far as Gibraltar that was called "Iberia," while the country along the "outer sea" had no general name. The chronology of Strabo here is obscure; and, so far as we know, Hecataeus (b. about 540 B.C.) is the first Greek to speak of "Iberia," and, after him, Herodotus (1. 163). Later on, Eratosthenes (276-194 B.C.) is the first to distinguish Iberia from Celtica (3. 2. 11), of which hitherto Iberia had been regarded as only a part; yet, if we accept Polybius, "Iberia" did not come to include all the Spanish peninsula, and hence equal "Hispania," until late in the second century B.C.

<sup>2</sup> On the doubtful origin and meaning of "Iberia" and "Hispania," see Burke-Hume, *A History of Spain*, vol. i, p. 2, n. 4, and p. 14, n. 1.

<sup>3</sup> That is, between the Iberus and the Pyrenees.

<sup>4</sup> Between the Iberus and the Pyrenees.

comprised between the two Galatic gulfs,<sup>1</sup> whereas the historians of to-day set the Pyrenees as the limit of Iberia and speak synonymously of this same country as "Iberia" and "Hispania";<sup>2</sup> but they used to give the name of "Iberia" solely to the country this side the Iberus,<sup>3</sup> although the historians still before that called the inhabitants of this very country<sup>4</sup> "Igletes,"<sup>5</sup> who occupy no large territory, as Asclepiades the Myrlean says. But though the Romans called the country as a whole both "Iberia" and "Hispania" synonymously, they spoke of one division of it as "Farther" and of the other as "Hither"; at different times, however, they divide the country in different ways, suiting their government of the country to the requirements of the times.<sup>6</sup>

20. At the present time, now that some of the provinces have been declared the property of the people and the senate, and the others that of the Roman emperor, Baetica belongs to the people;<sup>7</sup>

<sup>1</sup> But Herodorus (fl. about 400 B.C.), according to Stephanus Byzantinus (s. *Ἰβήρια*), places the "Igletes," or "Gletes," north of the Cynetes, that is, in south-western Iberia.

<sup>2</sup> There was no permanent boundary between Hither and Farther Spain. At first the boundary was the Iberus; Polybius makes it start at a point near Saguntum; after him, even Almeria in Murcia was made the starting-point; and at one time the capital of Hither Spain was New Carthage, though Augustus changed it to Tarraco. At first Hither Spain was merely the north-east corner; then, for a great part of the first and second centuries B.C., it was roughly bounded, let us say (cp. Burke-Hume, *op. cit.* p. 16, n. 2), by a line running through the modern Almeria, Saragossa and Gerona; and by the time of Julius Caesar, it comprised most of the peninsula except Baetica and Lusitania.

<sup>3</sup> The portion belonging to the emperor consisted of such parts of the country as required military defence. Baetica, now being the most civilised and peaceable, naturally fell to the people. Cp. 17. 3. 25.

and to govern it they send a praetor, who has under him both a quaestor and a legatus; its boundary, though, on the east, has been set in the neighbourhood of Castulo. But all the rest of Iberia is Caesar's; and he sends thither two legati, praetorian and consular respectively; the praetorian legatus, who has with him a legatus of his own, being sent to administer justice to those Lusitanians whose country is situated alongside Baetica and extends as far as the Durus River and its outlets (indeed, at the present time they apply the name Lusitania specifically to this country); and here, too, is the city of Augusta Emerita. The remainder of Caesar's territory (and this is the most of Iberia) is under the consular governor,<sup>1</sup> who has under him, not only a noteworthy army of, I should say, three legions, but also three legati. One of the three, with two legions, guards the frontier of the whole country beyond the Durus to the north: the inhabitants of this country were spoken of by the people of former times as Lusitanians, but by the people of to-day they are called Callaecians. Adjoining this country are the northerly mountains, together with the Asturians and the Cantabrians. The River Melsus flows through Asturia; a little farther on is the city of Noega; and near Noega there is an estuary from the ocean, which estuary is a boundary between the Asturians and the Cantabrians. The country next thereafter, along the mountains as far as the Pyrenees, is guarded by the second of the three legati and the other legion. The third legatus oversees the interior, and also conserves the interests

As for the governor himself, he passes his winters administering justice in the regions by the sea, and especially in New Carthage and Tarraco, while in the summer-time he goes the rounds of his province, always making an inspection of some of the things that require rectification. Caesar also has procurators there, of the equestrian rank, who distribute among the soldiers everything that is necessary for the maintenance of their lives.

the Greeks called 'Gymnesiae,' on account of the fact that the inhabitants went 'unclad' (γυμνοὺς τῆς ἐσθῆτος) in the summer-time" (so Livy, *Epit.* 60), "but by the natives and the Romans 'Balarides,' from the fact that they hurl (βάλλειν) big stones with their slings the best of all mankind" (so Livy, *l.c.*, who adds, "or else from Balanus, the companion of Hercules"). Strabo elsewhere (14. 2. 10) makes Balarides of Phoenician origin.

Now one of the Pityussae is called Ebusus, and it has a city of the same name; the circuit of the island is four hundred stadia, with the breadth and the length about equal. The other island, Ophiussa, which lies near Ebusus, is desert and much smaller. Of the Gymnesiae, the larger has two cities, Palma and Polentia, one of which, Polentia, is situated in the eastern part of the island, and the other in the western. The length of the island falls but little short of six hundred stadia, and the breadth but little short of two hundred—although Artemidorus has stated the length and breadth at double these figures. The smaller of the two is about two hundred and seventy stadia distant from Polentia. Now although it falls far short of the larger island in size, it is in no respect inferior thereto in the excellence of its soil; for both are blessed with fertility, and also have good harbours, though the harbours are full of reefs at the entrances, so that there is need of vigilance on the part of those who sail in. And it is on account of the fertility of these regions that the inhabitants are peaceable, as is also the case with the people on the island of Ebusus. But merely because a few criminals among them had formed partnerships with the pirates of the high seas, they were all cast into disrepute, and an over-sea expedition was made against them by Metellus, surnamed Balearicus, who is the man that founded their cities. On account of the same fertility of their islands, however, the inhabitants are ever the object of plots, albeit they are peaceable; still they are spoken of as the best of slingers. And this art they have practised assiduously, so it is said, ever since the Phoenicians took possession

of the islands. And the Phoenicians are also spoken of as the first to clothe the people there in tunics with a broad border; but the people used to go forth to their fights without a girdle on—with only a goat-skin, wrapped round the arm,<sup>1</sup> or with a javelin that had been hardened in the fire (though in rare cases it was also pointed with a small iron tip), and with three slings worn round the head,<sup>2</sup> of black-tufted rush (that is, a species of rope-rush, out of which the ropes are woven; and Philetas, too, in his "Hermeneia"<sup>3</sup> says, "Sorry his tunic besouled with dirt; and round about him his slender waist is entwined with a strip of black-tufted rush," meaning a man girdled with a rush-rope), of black-tufted rush, I say, or of hair or of sinews: the sling with the long straps for the long shots, the one with the short straps for the shots at short range, and the medium sling for the medium shots. And their training in the use of slings used to be such, from childhood up, that they would not so much as give bread to their children unless they first hit it with the sling.<sup>4</sup> This is why Metellus, when he was approaching the islands from the sea, stretched hides above the decks as a protection against the slings. And he brought thither as colonists three thousand of the Romans who were in Iberia.

2. In addition to the fruitfulness of the soil, there

<sup>1</sup> The works of Philetas of Cos are lost. This "Hermeneia," meaning "Interpretation" (?), is otherwise unknown. The reference may be to a poem of Philetas which, according to Parthenius (*Erotica* 2), was entitled "Harmes." However, the entire reference has every appearance of being merely a gloss on "black-tufted rush," as was first suggested by Casaubon.

<sup>2</sup> "The Pillars" was used in various senses in ancient times (cp. § 5 below), but the more common conception in Strabo's time appears to have been that of Calpe (the Rock of Gibraltar) and Abilyx (Ximiera, i.e., "Ape Mountain," in Africa). The two isles here referred to as near the Pillars cannot be identified; there are no islands in the strait at Calpe. Seymnus (142-145) puts the Pillar-isles near Maenaca (now Almunecar), but he says nothing about "Hera's Island." Perhaps the isles at Trafalgar—a cape, called by Mela (2. 6. 9) the Promontory of Juno, on which there was

is also the fact that no injurious animal can easily be found in the *Gymnesiae*. For even the rabbits there, it is said, are not native, but the stock sprang from a male and female brought over by some person from the opposite mainland; and this stock was, for a fact, so numerous at first, that they even overturned houses and trees by burrowing beneath them, and that, as I have said,<sup>1</sup> the people were forced to have recourse to the Romans. At present, however, the ease with which the rabbits are caught prevents the pest from prevailing; indeed, the landholders reap profitable crops from the soil. Now these islands are this side of what are called the Pillars of Heracles.

3. Close to the Pillars there are two isles, one of which they call Hera's Island; moreover, there are some who call also these isles the Pillars.<sup>2</sup> Gades, however, is outside the Pillars. Concerning Gades I have said only thus much, that it is about seven hundred and fifty stadia distant from Calpe<sup>3</sup> (that is, it is situated near the outlet of the Baetis), but there is more to be said about it than the others. For example, here live the men who fit out the most and largest merchant-vessels, both for Our Sea and the outer sea, although, in the first place, it is no large island they live in, and, secondly, they do not occupy much of the continent opposite the island, and, thirdly, they are not well-off in the

a temple of Hera (Ptolemaeus 2. 4. 5)—were once regarded as the Pillars. From this, as Goesselin and Groskurd think, the Promontory of Juno became confused with Calpe; hence a Hera's Island at Calpe, and also, Groskurd adds, the invention of a corresponding isle at Abilyx. Cp. the reference to Artemidorus in § 5 below, and see the discussion of Bérard, *Les Phéniciens et l'Odysse*, vol. i, pp. 264 ff. <sup>1</sup> 3. 1. 8.

Both Gosselin and Tozer conjecture that the islet here mentioned by Strabo has disappeared, or rather that all that is left of it is the dangerous reef of rocks off Cadiz to the north.

possession of other islands ; indeed, they live mostly on the sea, though a mere few keep at home or else while away their time at Rome. In population, however, Gades does not fall short, it would seem, of any of the cities except Rome ; at any rate I have heard that in one of the censuses of our own time there were five hundred men assessed as Gaditanian Knights—a number not equalled even in the case of the Italian cities except Patavium.<sup>1</sup> But though the Gaditanians are so numerous, they occupy an island not much larger than a hundred stadia in length, and in places merely a stadium in breadth. As for their city, the one they lived in at first was very small indeed, but Balbus of Gades, who gained the honour of a triumph,<sup>2</sup> founded another for them, which they call "Nea"<sup>3</sup>; and the city which is composed of the two they call "Didyme,"<sup>4</sup> although it is not more than twenty stadia in circuit, and even at that not crowded. For only a few stay at home in the city, because in general they are all at sea, though some live on the continent opposite the island, and also, in particular, on account of its natural advantages, on the islet that lies off Gades ;<sup>5</sup> and because they take delight in its geographical position they have made the islet a rival city, as it were, to Didyme.<sup>6</sup> Only a few, however, comparatively speaking, live either on the islet or in the harbour-town<sup>6</sup> which was constructed for them by Balbus on the opposite coast of the mainland. The city of Gades is situated on the westerly parts of the island ; and next to it, at the extremity of

<sup>4</sup> Strabo means the longitudinal distance between the two extremities of the island. For his definition of "length," see 2. 1. 32 (vol. I, p. 321). Strabo thought that the length

the island and near the islet, is the temple of Cronus; but the temple of Heracles is situated on the other side, facing towards the east, just where the island runs, it so happens, most closely to the mainland, thus leaving a strait of only about a stadium in width.<sup>1</sup> And they say that the temple is twelve miles<sup>2</sup> distant from the city, thus making the number of the miles equal to that of the Labours;<sup>3</sup> yet the distance is greater than that and amounts to almost as much as the length of the island; and the length of the island is that from the west to the east.<sup>4</sup>

4. By "Erytheia," in which the myth-writers place the adventures of Geryon, Pherecydes seems to mean Gades.<sup>5</sup> Others, however, think that Erytheia is the island that lies parallel to this city and is separated from it by a strait of a stadium in width,<sup>6</sup> that is, in view of the fine pasturage there, because the milk of the flocks that pasture there yields no whey. And when they make cheese they first mix the milk with a large amount of water, on account of the fat in the milk. Further, the animals choke to death within fifty days, unless you open a vein and bleed them. The grass upon which they graze is dry, but it makes them very fat; and it is from this fact, it is inferred, that the myth about the cattle of Geryon has been fabricated. The whole of the coast, however, is peopled jointly.<sup>7</sup>

5. In telling stories of the following sort about the founding of Gades, the Gaditanians recall a certain oracle, which was actually given, they say, to the Tyrians, ordering them to send a colony to the Pillars of Heracles: The men who were sent for the sake of spying out the region, so the story goes, believed, when they got near to the strait at Calpe, that the two capes which formed the strait were ends of the inhabited world and of Heracles' expedition, and that the capes themselves were what the oracle called "Pillars"; and they therefore lauded at a place inside<sup>1</sup> the narrows, namely, where the city of the Rixitanians now is; and there they offered sacrifice, but since the sacrifices did not prove favourable they turned homeward again; but the men who were sent at a later period went on outside the strait, about fifteen hundred stadia,<sup>2</sup> to an island sacred to Heracles, situated near the city of Onoba in Iberia, and believing that this was where the Pillars were they offered sacrifice to the god, but since again the sacrifices did not prove favourable they went back home; but the men who arrived on the third expedition founded Gades, and placed the temple in the eastern part of the island but the city in the western. For this reason some are of the opinion that the capes at the strait are the Pillars; others, Gades; and others that they lie on ahead still farther outside the strait than Gades. Again, some have supposed that Calpe and Abilyx are the Pillars, Abilyx being that mountain in Libya

its islets, which are 250 stadia east of Gades, since Gades is 750 stadia (8. 1. 8) from Calpe. But Onoba (Huelva), near which this unidentified island is, is near the mouth of the Odiel River, sixty miles west of Gades.

opposite Calpe which is situated, according to Eratosthenes, in Metagonium, country of a nomadic tribe; while others have supposed that the isles near each mountain, one of which they call Hera's Island, are the Pillars. Artemidorus speaks of Hera's Island and her temple, and he says there is a second isle, yet he does not speak of Mount Abilyx or of a Metagonian tribe. There are some who transfer hither both the Planetæ and the Symplegades, because they believe these rocks to be the pillars which Pindar calls the "gates of Gades" when he asserts that they are the farthestmost limits reached by Heracles.<sup>1</sup> And Dicaearchus, too, and Eratosthenes and Polybius and most of the Greeks represent the Pillars as in the neighbourhood of the strait. But the Iberians and Libyans say that the Pillars are in Gades, for the regions in the neighbourhood of the strait in no respect, they say, resemble pillars. Others say that it is the bronze pillars of eight cubits in the temple of Heracles in Gades, whereon is inscribed the expense incurred in the construction of the temple, that are called the Pillars; and those people who have ended their voyage with visiting these pillars and sacrificing to Heracles have had it noisily spread abroad that this is the end of both land and sea. Poseidonius, too, believes this to be the most plausible account of the matter,<sup>2</sup> but that the oracle and the many expeditions from Tyre are a Phœnician lie.<sup>3</sup> Now, concerning the expeditions, what could one affirm with confidence as to their falsity or trustworthiness when neither of the two opinions is contrary to reason? But to deny that the isles or

<sup>3</sup> See 17. 3. 20, where Strabo gives the place a different position, namely, on the coast of the Greater Syrtis, i. e. on the Gulf of Sidra. These altars were said to have been erected at the boundary between the Carthaginian Empire and Cyrenaica by the Carthaginian in honour of the two Philaeni brothers, who, in order to settle the boundary favourably for Carthage, had given themselves up to be

the mountains resemble pillars, and to search for the limits of the inhabited world or of the expedition of Heracles at Pillars that were properly so called, is indeed a sensible thing to do; for it was a custom in early times to set up landmarks like that. For instance, the people of Rhegium set up the column—a sort of small tower—which stands at the strait;<sup>1</sup> and opposite this column there stands what is called the Tower of Pelorus.<sup>2</sup> And in the land about midway between the Syrtes there stand what are called the Altars of the Philaeni.<sup>3</sup> And mention is made of a pillar placed in former times on the Isthmus of Corinth, which was set up in common by those Ionians who, after their expulsion from the Peloponnesus, got possession of Attica together with Megaris, and by the peoples<sup>4</sup> who got possession of the Peloponnesus; they inscribed on the side of the pillar which faced Megaris, "This is not the Peloponnesus, but Ionia," on the other, "This is the Peloponnesus, not Ionia."<sup>5</sup> Again, Alexander set up altars,<sup>6</sup> as limits of his Indian Expedition, in the furthestmost regions reached by him in Eastern India, thus imitating Heracles and Dionysus. So then, this custom was indeed in existence.

buried alive in the sand at the boundary (Sallust *Jugurtha* 79). Pliny (5. 4) says that the altars were of sand, thus implying that the altars were merely the sand-heaps over the two bodies.

<sup>1</sup> The Aeolians and Dorians (see 8. 1. 2).

<sup>2</sup> Plutarch (*Theseus* 25) also quotes the couplet, and says that the pillar was set up by Theseus. Strabo gives a fuller account in 9. 1. 6-7.

<sup>3</sup> Alexander set up twelve altars in honour of the twelve gods (Diodorus Siculus 17. 95).

6. More than that, it is reasonable for the place where a landmark is to take on the same appellation, and especially after time has once destroyed the landmark that has been set up. For instance, the Altars of the Philaeni no longer remain, yet the place has taken on the appellation. In India, too, there are no pillars, it is said, either of Heracles or of Dionysus to be seen standing, and, of course, when certain of the places there were spoken of or pointed out to the Macedonians,<sup>1</sup> they believed to be Pillars those places only in which they found some sign of the stories told about Dionysus or of those about Heracles. So, in the case of Gades, too, one might not disbelieve that the first visitors used, so to speak, "hand-wrought" landmarks—altars or towers or pillars—setting them up in the most conspicuous of the farthestmost places they came to (and the most conspicuous places for denoting both the ends and beginnings of regions are the straits, the mountains there situated,<sup>2</sup> and the isles), and that when the hand-wrought monuments had disappeared, their name was transferred to the places—whether you mean thereby the isles, or the capes that form the strait. For this is a distinction now hard to make—I mean to which of the two we should attach the appellation—because the term "Pillars" suits both. I say "suits" because both are situated in places of a sort that clearly suggest the ends; and it is on the strength of this fact that the strait has been called a "mouth,"—not only this strait, but several others as well: that is, as you sail in, the mouth is the beginning, and, as you sail out, the end. Accordingly, it would not be foolish for one to liken to pillars the isles at the mouth, since they have

the attributes of being both sharp of outline and conspicuous as signs; and so, in the same way, it would not be foolish to liken to pillars the mountains that are situated at the strait, since they present just such a prominent appearance as do columns or pillars. And in this way Pindar would be right in speaking of the "gates of Gades," if the pillars were conceived of as at the mouth; for the mouths of straits are like gates. But Gades is not situated in such a geographical position as to denote an end; rather it lies at about the centre of a long coastline that forms a bay. And the argument that refers those pillars which are in the temple of Heracles at Gades to the Pillars of Heracles is less reasonable still, as it appears to me. For it is plausible that the fame of the name "Pillars of Heracles" prevailed because the name originated, not with merchants, but rather with commanders, just as in the case of the Indian pillars; and besides that, "the inscription"<sup>1</sup> which they speak of, since it does not set forth the dedication of a reproduction<sup>2</sup> but instead a summary of expense, bears witness against the argument; for the Heracleian pillars should be reminders of Heracles' mighty doings, not of the expenses of the Phoenicians.

7. Polybius says that there is a spring in the Heracleium<sup>3</sup> at Gades, with a descent of only a few steps to the water (which is good to drink), and that the spring behaves inversely to the flux and reflux of the sea, since it falls at the time of the flood-tides and fills up at the time of the ebb-tides. And he alleges as the cause of this that the air

<sup>1</sup> Polybius has said that there was "a spring in the Heraclium"; Poseidonius says "two wells"; but Pliny (2. 100) says, "At Gadcs, which is very near the temple of Hercules

which is expelled from the depths of the earth to the surface, if the surface be covered by the waters at the time of the overflows of the sea, is shut off from its proper exits there, and turning back into the interior blocks up the passages of the spring and thus causes a failure of water, whereas if the surface be bared of the waters again the air passes straight forward and thus sets free the veins of the spring, so that it gushes forth abundantly. As for Artemidorus, although he speaks out against Polybius and at the same time puts forth a cause of his own, and also recalls the opinion of Silanus the historian, he does not seem to me to have stated anything worth recording, since both he himself and Silanus are, you might say, laymen with respect to these matters. But Poseidonius, although he calls the story of this spring false, says that there are two wells<sup>1</sup> in the Heracleium and a third in the city; and, of the two wells in the Heracleium, if you draw water continuously from the smaller it actually fails in the same hour, and if you leave off drawing the water, it fills up again; whereas you may draw water all day long from the larger (though it is diminished thereby, of course, just as all other wells are), and it fills up by night if you no longer draw from it, but since the ebb-tide often occurs at the particular time of the well's fullness, the natives have believed anew in the inverse-behaviour. Now not only has Poseidonius told us that the story has been believed, but I too, since it is told over and over again among the paradoxes,<sup>2</sup> have been taught the story. And if there is a spring, enclosed like a well," to which he ascribes the phenomenon of the inverse-behaviour.

<sup>1</sup> The paradoxes constituted an important part of the teachings of the Stoics; and Strabo was a Stoic.

<sup>1</sup> Strabo considered Athenodorus and Poseidonius the best authorities on the ocean and the tides (1. 1. 9). He has already compared the sea to animated beings (1. 3. 8). And it was a popular doctrine among the Greek and Roman philosophers that the universe was an animal; and in this way they accounted for the tides (Pomponius Mela 3. 1).

have been hearing that there are still other wells, some in the gardens in front of the city, and others within the city, but that on account of the impurity of the water reservoirs of cistern-water are prevalent in the city. Whether, however, any of these wells proves the truth of the supposition of the inverse-behaviour, I do not know. But as for the causes alleged—if it be true that the case is as reported—we should, regarding the problem as a difficult one, welcome them. For it is reasonable to suppose that the cause is what Polybius says it is; and it is reasonable to suppose also that some of the veins of the spring, if soaked from the outside, become relaxed and thus afford their water an outflow at the sides, instead of forcing it up along the old channel into the spring (the veins are of necessity soaked when the tidal wave has washed over the land). Yet if, as Athenodorus says, the case with the flood-tides and with the ebb-tides is like inhalation and exhalation,<sup>1</sup> then, of the flowing waters, he says, there might be some which by certain passages (whose mouths, of course, we call fountains or springs) naturally have their outflow to the surface, and by certain other passages are drawn in together to the depths of the sea; that is, in helping raise the sea<sup>2</sup> to flood-tide when the exhalation, as it were, takes place, they abandon their proper channel, and then retreat to their proper channel again when the sea itself takes its retreat.

people, can here charge them with foolishness rather than shrewdness. In the first place, a day and night is measured by the revolution of the sun, which, at one time, is below the earth, but, at another, shines above the earth. And yet Poseidonius says that the movement of the ocean is subject to periods like those of the heavenly bodies, since, behaving in accord with the moon, the movement exhibits first the diurnal, secondly the monthly, and thirdly the yearly period; for when the moon rises above the horizon to the extent of a zodiacal sign,<sup>1</sup> the sea begins to swell, and perceptibly invades the land until the moon is in the meridian; but when the heavenly body has begun to decline, the sea retreats again, little by little, until the moon rises a zodiacal sign above her setting; then remains stationary until such time as the moon reaches the setting itself, and, still more than that, until such time as the moon, moving on below the earth, should be a sign distant from the horizon; then invades the land again until the moon reaches the meridian below the earth; then retreats until the moon, moving round towards her risings, is a sign distant from the horizon; but remains stationary again until the moon is elevated a sign above the earth, and then it again invades the land. This, he continues, is the diurnal period. As for the monthly period, he says the flux and reflux become greatest about the time of the conjunction,<sup>2</sup> and then diminish until the half-moon;<sup>3</sup> and, again, they increase until the full moon and diminish again until the waning half-moon;<sup>4</sup> and then, until the

conjunction, the increases take place again, and the increases are further increased in respect both to duration and to speed.<sup>1</sup> As for the annual periods, he says that he learned of them from the people at Gades, who told him that both the retreat and the invasion grew greatest at the time of the summer solstice. And from this he himself surmises that they are diminished from that solstice up to the equinox,<sup>2</sup> increased up to the winter solstice, then diminished up to the spring equinox, and then increased up to the summer solstice. But if these periods repeat themselves every separate day and night, the sea invading the land twice and also retreating twice during the combined time of day and night, in regular order both within the day-time and within the night-time, how is it possible for the filling up of the well to occur "often" at the time of the ebb-tides<sup>3</sup> but for the failure not also to occur often? or often, but not equally often? or even equally often indeed, but for the people of Gades to have been incapable of observing these phenomena that were taking place every day, and yet to have been capable of observing the annual periods from what occurred only once a year? Furthermore, that Poseidonius really believes these people, is clear from the surmise which he adds to their story, namely, that the diminutions, and, in turn, the increases, take place from one solstice on to the other, and also that recurrences take place from the latter solstice back to the former. Moreover, that other

<sup>1</sup> At the beginning of § 8 Strabo sets out, rather captiously, to prove inconsistency and injustice on the part of Poseidonius. The latter had accused the Phoenicians (the people of Gades) of having the foolish notion about the "reverse-behaviour," of being incapable of seeing the daily phenomena, and of believing in things that did not occur; nevertheless, Strabo means, Poseidonius bases his own remarks about the tides upon what he had learned from the people of Gades, for example, that "the retreat and the invasion grew greatest at the time of the summer solstice." Of course, Strabo denies neither Poseidonius' account of the tides, nor the relation that Poseidonius says exists between the tides and the motion of the moon, both of which, so far as they go, are substantially correct. Cp. Pliny, 2. 90.

supposition of Poseidonius is not reasonable either, namely, that, although they were an observant people, they did not see the phenomena that occurred and yet believed in the things that did not occur.<sup>1</sup>

9. Be that as it may, he says that Seleucus—the Seleucus<sup>2</sup> from the region of the Erythraean Sea—speaks of a certain irregularity in these phenomena, or regularity, according to the differences of the signs of the zodiac; that is, if the moon is in the equinoctial signs, the behaviour of the tides is regular, but, in the solstitial signs, irregular, in respect both to amount and to speed, while, in each of the other signs, the relation<sup>3</sup> is in proportion to the nearness of the moon's approach.<sup>4</sup> But although he himself spent several days in the Heracleium at Gades at the summer solstice, about the time of the full moon, as he says, he was unable to discern those annual differences in the tides; about the time of the conjunction, however, during that month, he observed at Ilipa a great variation in the back-water of the Bætis, that is, as compared with the previous variations, in the course of which the water did not wet the banks so much as half-way up, whereas at the time in question the water overflowed to such an extent that the soldiers<sup>5</sup> got their supply of water on the spot (and Ilipa is about

seven hundred stadia distant from the sea). And, he continues, although the plains near the sea were covered as far as thirty<sup>1</sup> stadia inland, to such a depth that islands were enclosed by the flood-tide,<sup>2</sup> still the altitude of the foundations, both the foundation of the temple in the Heracleum and that of the mole which lies in front of the port of Gades, was, by his own measurement, as he says, not covered as high up as ten cubits; and further, if one should add the double of this figure for the additional increases which at times have taken place, one might thus present to the imagination the aspect which is produced in the plains by the magnitude of the flood-tide. This behaviour of the tides, then, according to his account, is general along the whole circuit of the ocean-coast, whereas the behaviour of the Iberus River is "novel, and peculiar," he says, to that river, namely: it floods the country in some places, even independently of rains or snows, when the north winds blow to excess; and the lake through which the river flows is the cause of this, since the lake-water is by the winds driven out of the lake along with the river-water.

10. Poseidonius also tells of a tree<sup>3</sup> in Gades which has branches that bend to the ground, and oftentimes has leaves (they are sword-like) a cubit in length but only four fingers in breadth. And near New Carthage, he says, there is a tree whose thorns yield a bark<sup>4</sup> out of which most beautiful woven stuffs are made. Now I too know a tree<sup>5</sup> in Egypt which is like that in Gades so far as the bending

down of the branches is concerned, but unlike it in respect to the leaves and also in that it has no fruit (he says the tree in Gades has fruit). Thorn-stuffs are woven in Cappadocia also; it is no tree, however, that produces the bark-yielding thorn, but only a sort of herb that keeps close to the ground. In regard to the tree at Gades, this additional circumstance is told: if a branch is broken, milk flows from it, while if a root is cut, a red liquid oozes forth. Concerning Gades, then, I have said enough.

11. The Cassiterides are ten in number, and they lie near each other in the high sea to the north of the port of the Artabrians. One of them is desert, but the rest are inhabited by people who wear black cloaks, go clad in tunics that reach to their feet, wear belts around their breasts, walk around with canes, and resemble the goddesses of Vengeance in tragedies. They live off their herds, leading for the most part a nomadic life. As they have mines of tin and lead, they give these metals and the hides from their cattle to the sea-traders in exchange for pottery, salt and copper utensils. Now in former times it was the Phoenicians alone who carried on this commerce (that is, from Gades), for they kept the voyage hidden from every one else. And when once the Romans were closely following a certain ship-captain in order that they too might learn the markets in question, out of jealousy the ship-captain purposely drove his ship out of its course into shoal water; and after he had lured the followers into the same ruin, he himself escaped by a piece of wreckage and received from the State the value of the cargo he had lost. Still, by trying many times, the Romans learned all about the

1. Next, in order,<sup>1</sup> comes Transalpine Celtica.<sup>2</sup> I have already<sup>3</sup> indicated roughly both the shape and the size of this country; but now I must speak of it in detail. Some, as we know, have divided it into three parts, calling its inhabitants Aquitani, Belgae, and Celtae.<sup>4</sup> The Aquitani, they said, are wholly different, not only in respect to their language but also in respect to their physique—more like the Iberians than the Galatae; while the rest of the inhabitants are Galatic in appearance, although not all speak the same language, but some make slight variations in their languages. Furthermore, their governments and their modes of life are slightly different. Now by "Aquitani" and "Celtae" they meant the two peoples (separated from each other by the Cevennes Mountain) who live next to the Pyrenees; for, as has already been said,<sup>5</sup> this Celtica is bounded on the west by the Pyrenees Mountains, which join the sea on either side, that is, both the inner and the outer sea; on the east, by the River Rhene, which is parallel to the Pyrenees; as for the parts on the north and the south, those on the north are surrounded by the ocean (beginning at the

northern headlands of the Pyrenees) as far as the mouths of the Rhénus, while those on the opposite side are surrounded by the sea that is about Massilia and Narbo, and by the Alps (beginning at Liguria) as far as the sources of the Rhénus. The Cœmnenus Mountain has been drawn at right angles to the Pyrenees, through the midst of the plains; and it comes to an end about the centre of these plains,<sup>1</sup> near Lugdunum,<sup>2</sup> with an extent of about two thousand stadia. So, then, by "Aquitani" they meant the people who occupy the northern parts of the Pyrenees and, from the country of the Cœmnenus on to the ocean, the parts this side the Garumna River; by "Celtæ" they meant the people whose territory extends in the other direction—down to the sea that is about Massilia and Narbo—and also joins some of the Alpine Mountains; and by "Belgae" they meant the rest of the people who live beside the ocean as far as the mouths of the Rhénus and also some of the people who live beside the Rhénus and the Alps. Thus the Deified Caesar, also, has put it in his "Commentaries."<sup>3</sup> Augustus Caesar, however, divided Transalpine Celtica into four parts: the Celtæ he designated as belonging to the province of Narbonitis;<sup>4</sup> the Aquitani he designated as the former Caesar had already done, although he added to them fourteen tribes of the peoples who dwell between the Garumna and the Liger Rivers; the rest of the country he divided into two parts: one part he included within the boundaries of Lugdunum as far as the upper districts

of the Rhenus,<sup>1</sup> while the other he included within the boundaries of the Belgae.<sup>2</sup> Now although the geographer should tell of all the physical and ethnic distinctions which have been made, whenever they are worth recording, yet, as for the diversified political divisions which are made by the rulers (for they suit their government to the particular times), it is sufficient if one state them merely in a summary way; and the scientific treatment of them should be left to others.

2. Now the whole of this country is watered by rivers: some of them flow down from the Alps, the others from the Cœmnenus and the Pyrenees; and some of them are discharged into the ocean, the others into Our Sea. Further, the districts through which they flow are plains, for the most part, and hilly lands with navigable water-courses. The riverbeds are by nature so well situated with reference to one another that there is transportation from either sea into the other; for the cargoes are transported only a short distance by land, with an easy transit through plains, but most of the way they are carried on the rivers—on some into the interior, on the others to the sea. The Rhodanus offers an advantage in this regard; for not only is it a stream of many tributaries, as has been stated,<sup>3</sup> but it also connects with Our Sea, which is better than the outer sea, and traverses a country which is the most favoured of all in that part of the world. For example, the same fruits are produced by the whole of the province of Narbonitis as by Italy. As you proceed towards the north and the Cœmnenus Mountain, the olive-planted and fig-bearing land indeed ceases, but the other things still grow. Also the vine, as

you thus proceed, does not easily bring its fruit to maturity. All the rest of the country produces grain in large quantities, and millet, and nuts, and all kinds of live stock. And none of the country is untilled except parts where tilling is precluded by swamps and woods. Yet these parts too are thickly peopled—more because of the largeness of the population<sup>1</sup> than because of the industry of the people; for the women are not only prolific, but good nurses as well, while the men are fighters rather than farmers. But at the present time they are compelled to till the soil, now that they have laid down their arms. However, although I am here speaking only in a general way of the whole of outer Celtica,<sup>2</sup> let me now take each of the fourth parts separately and tell about them, describing them only in rough outline. And first, Narbonitis.

3. The figure of Narbonitis is approximately a parallelogram, since, on the west, it is traced by the Pyrenees, and, on the north, by the Cemmennus; as for the remaining sides, the southern is formed by the sea between the Pyrenees and Massilia, the eastern by the Alps, partly, and also by the intervening distance (taken in a straight line with the Alps) between the Alps and those foot-hills of the Cemmennus that reach down to the Rhodanus and form a right angle with the aforesaid straight line from the Alps. To the southern part there belongs an addition to the aforesaid figure, I mean the seaboard that follows next<sup>3</sup> which is inhabited by the Massiliotes and the Sallyes, as far as the Ligures, to those parts that lie towards Italy and to the Varus River. This river is, as I stated before,<sup>4</sup> the boundary between this Province and Italy. It is only a small

river in summer, but in winter it broadens out to a breadth of as much as seven stadia. Now from this river the seaboard extends as far as the temple of the Pyrenaean Aphrodite. This temple, moreover, marks the boundary between the province of Narbonitis and the Iberian country, although some represent the place where the Trophies of Pompey are as marking the boundary between Iberia and Celtica. The distance thence to Narbo is sixty-three miles, from here to Nemausus<sup>1</sup> eighty-eight, from Nemausus through Ugernum and Tarusco to the hot waters that are called "Sextian,"<sup>2</sup> which are near Massilia, fifty-three, and thence to Antipolis and the Varus River seventy-three; so that the sum total amounts to two hundred and seventy-seven miles. Some, however, have recorded the distance from the temple of Aphrodite on to the Varus River as two thousand six hundred stadia, while others add two hundred more; for there is disagreement with respect to the distances. But if you go by the other road—that leads through the country of the Vocontii and that of Cottius: from Nemausus the road is identical with the former road as far as Ugernum and Tarusco, but thence it runs across the Druentia River and through Caballio sixty-three miles to the frontiers of the Vocontii and the beginning of the ascent of the Alps; and thence, again, ninety-nine miles to the other frontiers of the Vocontii, at the country of Cottius, to the village of Ebrodunum; then, another ninety-nine through the village of Brigantium and Scingomagus and the pass that leads over the Alps to Occlum, the end of the land of Cottius.

Moreover, from Scingomagus on you begin to call the country Italy; and the distance from here to Ocelum is twenty-eight miles.

4. Massilia was founded by the Phocaeans, and it is situated on a rocky place. Its harbour lies at the foot of a theatre-like rock which faces south. And not only is the rock itself well fortified, but also the city as a whole, though it is of considerable size. It is on the headland, however, that the Ephesium and also the temple of the Delphinian<sup>1</sup> Apollo are situated. The latter is shared in common by all Ionians, whereas the Ephesium is a temple dedicated solely to the Ephesian Artemis: for when the Phocaeans were setting sail from their homeland an oracle was delivered to them, it is said, to use for their voyage a guide received from the Ephesian Artemis; accordingly, some of them put in at Ephesus and inquired in what way they might procure from the goddess what had been enjoined upon them. Now the goddess, in a dream, it is said, had stood beside Aristarcha, one of the women held in very high honour, and commanded her to sail away with the Phocaeans, taking with her a certain reproduction<sup>2</sup> which was among the sacred images; this done and the colony finally settled, they not only established the temple but also did Aristarcha the exceptional honour of appointing her priestess; further, in the colonial cities<sup>3</sup> the people everywhere do this goddess honours of the first rank, and they preserve the artistic design of the "xoanon"<sup>4</sup> the same, and all the other usages precisely the same as is customary in the mother-city.

wooden images which were supposed originally to have fallen from heaven. Here, as on page 177, "xoanon" is used of a reproduction.

<sup>4</sup> Literally, "Honour-holders."

5. The government under which the Massiliotes live is aristocratic, and of all aristocracies theirs is the best ordered,<sup>1</sup> since they have established an Assembly of six hundred men, who hold the honour of that office for life; these they call *Timouchoi*.<sup>2</sup> Over the Assembly are set fifteen of its number, and to these fifteen it is given to carry on the immediate business of the government. And, in turn, three, holding the chief power, preside over the fifteen.<sup>3</sup> However, a *Timouchos* cannot become one of these three unless he has children or is a descendant of persons who have been citizens for three generations. Their laws are Ionic, and are published to the people. They possess a country which, although planted with olive-trees and vines, is, on account of its ruggedness, too poor for grain; so that, trusting the sea rather than the land, they preferred their natural fitness for a seafaring life. Later, however, their valour enabled them to take in some of the surrounding plains, thanks to the same military strength by which they founded their cities, I mean their stronghold-cities, namely, first, those which they founded in Iberia as strongholds against the Iberians<sup>4</sup> (they also taught the Iberians the sacred rites of the Ephesian Artemis, as practised in the fatherland, so that they sacrifice by the Greek ritual); secondly, *Rhoë Agathe*, as a stronghold against the barbarians who live round about the River Rhodanus; thirdly, *Tauroentium*, *Olbia*, *Antipolis*, and *Nicaea*, against the tribe of the *Sallyes*

<sup>1</sup> The later editors, by a slight emendation, add at this point "and one over the three."

and against those Ligures who live in the Alps. There are also dry-docks and an armoury among the Massiliotes. In earlier times they had a good supply of ships, as well as of arms and instruments that are useful for the purposes of navigation and for sieges; and thanks to these they not only held out against the barbarians, but also acquired the Romans as friends, and many times not only themselves rendered useful service to the Romans, but also were aided by the Romans in their own aggrandizement. At any rate, Sextius, who defeated the Sallies, after founding not very far from Massilia a city which bears his own name and that of "the hot waters"<sup>1</sup> (some of which, they say, have changed to cold waters), not only settled a garrison of Romans there, but also drove back the barbarians out of the seaboard which leads from Massilia into Italy, since the Massiliotes could not entirely keep them back. Yet not even Sextius could effect more than merely this—that at those parts of the coast where there were good harbours the barbarians retired for a distance of only twelve stadia, and at the rugged parts, only eight. And the country thus abandoned by them he has given over to the Massiliotes. And in their citadel are set up great quantities of the first fruits of their victories, which they captured by defeating in naval battles those who from time to time unjustly disputed their claim to the mastery of the sea. In earlier times, then, they were exceptionally fortunate, not only in everything else, but also in their friendship with the Romans, of which one may detect many signs; what is more, the "xoanon"<sup>2</sup> of that Artemis which is on the Aventine Hill was constructed by the

Romans on the same artistic design as the "xoanon" which the Massiliotes have. But at the time of Pompey's sedition against Caesar they joined the conquered party and thus threw away the greater part of their prosperity. Nevertheless traces of their ancient zeal are still left among the people, especially in regard to the making of instruments and to the equipment of ships. But since, on account of the overmastery of the Romans, the barbarians who are situated beyond the Massiliotes became more and more subdued as time went on, and instead of carrying on war have already turned to civic life and farming, it may also be the case that the Massiliotes themselves no longer occupy themselves so earnestly with the pursuits aforementioned. Their present state of life makes this clear; for all the men of culture turn to the art of speaking and the study of philosophy; so that the city, although a short time ago it was given over as merely a training-school for the barbarians and was schooling the Galatae to be fond enough of the Greeks to write even their contracts in Greek, at the present time has attracted also the most notable of the Romans, if eager for knowledge, to go to school there instead of making their foreign sojourn at Athens. Seeing these men and at the same time living at peace, the Galatae are glad to adapt their leisure to such modes of life, not only as individuals, but also in a public way; at any rate, they welcome sophists,<sup>1</sup> hiring some at private expense, but others in common, as cities, just as they do physicians. And the following might be set down as not the least proof of the simplicity of the modes of life, and of the self-restraint, of the Massiliotes: the maximum dowry among them is a hundred

gold pieces, and five for dress, and five for golden ornaments;<sup>1</sup> but more than this is not permitted. Both Caesar and the commanders who succeeded him, mindful of the former friendship, acted in moderation with reference to the wrongs done in the war, and preserved to the city the autonomy which it had had from the beginning; so that neither Massilia nor its subjects are subject to the praetors who are sent to the province.<sup>2</sup> So much for Massilia.

6. While the mountainous country of the Sallyes inclines more and more from the west to the north and retires little by little from the sea, the coastline bends round to the west; but after extending a short distance from the city of the Massiliotes, about a hundred stadia, to a fair-sized promontory near some stone-quarries, the coastline then begins to curve inland and to form with the precincts of Aphrodite (that is, the headland of the Pyrenees) the Galatic Gulf, which is also called the Gulf of Massilia. The Gulf is double, for, in the same circuit, Mount Setium,<sup>3</sup> with the help of the Isle of Blaescon,<sup>4</sup> which is situated near by, juts out and thus marks off two gulfs. Of the two gulfs, the larger, into which the mouth of the Rhodanus discharges, is again called, in the proper sense of the term, "Galatic Gulf"; the smaller is opposite Narbo and extends as far as the Pyrenees. Now Narbo lies above the outlets of the Atax and the Lake of Narbonitis, and it is the greatest of the emporiums in

this country, though there is a city near the Rhodanus which is no small emporium, namely, Arclate. These emporiums are about an equal distance from each other and from the aforesaid headlands—Narbo from the precincts of Aphrodite, and Arelate from Massilia. On either side of Narbo there flow other rivers—some from the Cemmenus Mountains, the others from the Pyrenees—and they have cities to which voyages of no considerable length are made in small ships. From the Pyrenees flow both the Ruscino and the Ilibirris, each of them having a city of like name; and, as for the Ruscino, there is not only a lake near by, but also, a short distance above the sea, a marshy district, full of salt-springs, which contains the “dug mullets”; for if one digs only two or three feet and thrusts his trident down into the muddy water, it is possible to spit a fish that is notable for its size; and it feeds on the mud just as the eels do. These, then, are the rivers which flow from the Pyrenees between Narbo and the precincts of Aphrodite; while, on the other side of Narbo there flow to the sea from the Cemmenus (from which the Atax flows) both the Orbis and the Arauris. On the former of these rivers is situated Baetera, a safe city, near Narbo, and on the other, Agathe, founded by the Massiliotes.

7. Now the aforesaid seaboard has not merely one marvel, namely, that of the “dug mullets,” but also another which one might say is greater than that, about which I shall now speak: Between Massilia and the outlets of the Rhodanus there is a plain, circular in shape, which is as far distant from

<sup>1</sup> Now the Plaine de la Crau.

<sup>2</sup> So Pliny, 21. 57. And Murray (*Handbook for France*, vol. 2, p. 154) says that to-day there grows under the stones on this plain a short sweet herbage which the sheep obtain by turning over the stones, and that during the winter months the plain is covered with flocks driven thither from the French Alps, where they spend the summer.

the sea as a hundred stadia, and is also as much as that in diameter. It is called Stony Plain<sup>1</sup> from the fact that it is full of stones as large as you can hold in your hand, although from beneath the stones there is a growth of wild herbage which affords abundant pasturage for cattle.<sup>2</sup> In the middle of the plain stand water and salt springs, and also lumps of salt. Now although the whole of the country which lies beyond, as well as this, is exposed to the winds, the Black North, a violent and chilly wind, descends upon this plain with exceptional severity; at any rate, it is said that some of the stones are swept and rolled along, and that by the blasts the people are dashed from their vehicles and stripped of both weapons and clothing. Now Aristotle says that the stones, after being vomited to the surface by those earthquakes that are called "Brastæ,"<sup>3</sup> rolled together into the hollow places of the districts. But Poseidonius says that, since it<sup>4</sup> was a lake, it solidified<sup>5</sup> while the waves were dashing, and because of this was parted into a number of stones—as are the river-rocks and the pebbles on the sea-shore; and by reason of the similarity of origin, the former, like the latter, are both smooth and equal in size. And an account of the cause has been given by both men. Now the argument in both treatises is plausible; for of necessity the stones that have been assembled to-

<sup>1</sup> Aristotle says (*De Mundo* 4) that "those earthquakes are called 'Brastæ' which heave up and down at right angles."

<sup>2</sup> The antecedent of "it" in Poseidonius must have been "what is now the stony surface of the plain."

<sup>3</sup> Poseidonius was thinking of both the congealing and petrifying of the waters.

gether in this way cannot separately, one by one, either have changed from liquid to solid or have been detached from great masses of rock that received a succession of fractures. What was difficult to account for, however, Aeschylus, who closely studied the accounts or else received them from another source, removed to the realm of myth. At any rate, Prometheus, in Aeschylus' poem, in detailing to Heracles the route of the roads from the Caucasus to the Hesperides says: "And thou wilt come to the undaunted host of the Ligurians, where thou wilt not complain of battle, I clearly know,—impetuous fighter though thou art; because there it is fated that even thy missiles shall fail thee, and no stone from the ground shalt thou be able to choose, since the whole district is soft ground. But Zeus, seeing thee without means to fight, will have pity upon thee, and, supplying a cloud with a snow-like shower of round stones, will put the soil under cover; and with these stones, thereupon, thou wilt pelt, and easily push thy way through, the Ligurian host."<sup>1</sup> Just as if it were not better, says Posidonius, for Zeus to have cast the stones upon the Ligures themselves and to have buried the whole host than to represent Heracles as in need of so many stones. Now, as for the number ("so many"), he needed them all if indeed the poet was speaking with reference to a throng that was very numerous; so that in this, at least, the writer of the myth is more plausible than the man who revises the myth. Furthermore, by saying "it is fated," the poet forbids one to find fault in a captious way with anything else in the

passage—"captious," I say, for one might also find in the discussions on "Providence" and "Predestination" many instances among the affairs of men and among the natural occurrences of such a kind that, in reference to them, one might say that it were much better for this to have taken place than that; for example, for Egypt to be well-watered by rains, rather than that Ethiopia should soak its soil with water; and for Paris to have met his reversal by shipwreck on the voyage to Sparta, instead of later carrying off Helen and paying the penalty to those whom he had wronged, after he had effected all that ruin of Greeks and barbarians—a ruin which Euripides attributed to Zeus: "For Zeus, the father, willing not only evil for the Trojans but also sorrow for the Greeks, resolved upon all this."

8. With respect to the mouths of the Rhodanus: Polybius reproves Timaeus by saying that there are not five but two; Artemidorus says three; Marius, later, seeing that, in consequence of the silting, its mouths were becoming stopped up and difficult of entrance, cut a new channel, and, upon admitting the greater part of the river here, presented it to the Massiliotes as a meed of their valour in the war against the Ambrones and Toygent;<sup>1</sup> and the wealth they carried off from this source was considerable, because they exacted tolls from all who sailed up and all who sailed down it. Nevertheless, the mouths still remain difficult of entrance for ships, not only on account of the impetuosity of the river and the silting up, but also of the lowness of the

country, so that in foul weather one cannot descry the land even when close to it. Wherefore the Massiliotes set up towers as beacons, because they were in every way making the country their own; and, in truth, they also established a temple of the Ephesian Artemis there, after first enclosing a piece of land which is made an island by the mouths of the river. Beyond the outlets of the Rhodanus lies a sea-water marsh; it is called "Stomalimne,"<sup>1</sup> and it has a very great quantity of oysters, and, besides that, is well supplied with fish. This lake was by some counted in with the mouths of the Rhodanus, and particularly by those who said there were seven mouths, although they were right in neither the latter nor the former; for there is a mountain intervening which separates the lake from the river. This, then, is approximately the nature and the extent of the seaboard from the Pyrenees to Massilia.

9. Again, the seaboard which extends from Massilia to the Varus River and to those Ligures who live in the region of the river has not only the following cities of the Massiliotes, namely, Tauroentium, Olbia, Antipolis, and Nicaea, but also that naval-station of Caesar Augustus which is called Forum Julium. This naval-station is situated between Olbia and Antipolis, at a distance of about six hundred stadia from Massilia. The Varus is between Antipolis and Nicaea, at a distance of about twenty stadia from the latter and sixty from the former, so that, according to what is now the declared boundary,<sup>2</sup> Nicaea becomes a part of Italy, although it belongs to the Massiliotes; for the Massiliotes founded these places as strongholds against those

barbarians who were situated beyond, wishing at least to keep free the sea, since the land was controlled by the barbarians; for it is mountainous and also strong for defence, since, although next to Massilia it leaves a strip of level land of moderate width, yet as you proceed towards the east it squeezes the strip off altogether towards the sea, and scarcely leaves the road itself passable. Now the first of these districts are occupied by the Sallyes, but the last by those Ligures whose territory connects with Italy, concerning whom I shall speak hereafter. But at present I need add only this, that, although Antipolis is situated among the parts that belong to Narbonitis, and Nicaea among those that belong to Italy, Nicaea remains subject to the Massiliotes and belongs to the Province,<sup>1</sup> while Antipolis is classed among the Italiote cities,<sup>2</sup> having been so adjudged in a suit against the Massiliotes and thereby freed from their orders.

10. Lying off these narrow stretches of coast, if we begin at Massilia, are the five Stoechades Islands,<sup>3</sup> three of them of considerable size, but two quite small; they are tilled by Massiliotes. In early times the Massiliotes had also a garrison, which they placed there to meet the onsets of the pirates, since the islands were well supplied with harbours. Next, after the Stoechades, are the islands of Planasia and Lero, which have colonial settlements. In Lero there is also a hero-temple, namely, that in honour of Lero; this island lies off Antipolis. And,

a fairly suitable appellation. Pliny (3. 11) applies the name only to the three large ones, while Pomponius Mela (2. 7) includes the other islands off the shore from Massilia as far as the country of the Ligures.

besides, there are isles that are not worth mentioning, some off Massilia itself and the others off the rest of the aforesaid shore. As for the harbours, the one that is at the naval-station is of considerable size, and so is that of the Massiliotes, whereas the others are only of moderate size; among these latter is the harbour that is called Oxybius, so named after the Oxybian Ligures. This is what I have to say about the seaboard.

11. As for the country that lies beyond the seaboard, its geographical limits are, in a general way, traced by the mountains that lie round about it, and also by the rivers—by the Rhodanus River especially, for it not only is the largest but also affords the most navigation inland, since the number of the streams from which it is filled is large. However, I must tell about all these regions in order. If you begin, then, at Massilia, and proceed towards the country that is between the Alps and the Rhodanus: Up to the Druentia River the country is inhabited by the Sallyes for a distance of five hundred stadia; but if you cross the river by ferry into the city of Caballio, the whole country next thereafter belongs to the Cavari, up to the confluence of the Isar with the Rhodanus; this is also approximately where the Cennenus Mountain joins the Rhodanus; the length of your journey from Druentia up to this place is seven hundred stadia. Now the Sallyes occupy—I mean in their own country<sup>1</sup>—not only the plains but also the mountains that lie above the plains, whereas above the Cavari are situated the Vocontii, Tricorii, Iconii, and Medulli. Between the Druentia and the Isar there are still other rivers which flow from the Alps to the

<sup>1</sup> Καουάρων, Siebenkees, for Κλαουάρων; so the later editors.

<sup>2</sup> Xylander would omit καὶ Οὐάρων; so Siebenkees, Corais, Kramer, Forbiger, and Meineke. Groskurd emends to Καρπένταρον, or Καρπεντάρωνα. Casaubon, comparing Λουερίωνος in 4. 6. 3, conjectures Λουερίωνα.

<sup>1</sup> Groskurd, believing with Gosselin that the Ouvèze and the Mède are the rivers meant by Strabo, emends "and the Vari" to "Carpenteron"—the "Carpentoracte" (to-day Carpentras) of Pliny (3. 5). Several scholars (see critical note above, on this page) omit "and the Vari" altogether. Ukert (*Geogr.* 1832, vol. iii, page 138) thinks he recognizes in "Cavari" and "Vari" the corrupted names of the rivers now called Rubion and Jabrou, and that the city (which he thinks has fallen out of the text) is Akousio (mentioned by Ptolemaeus), to-day Ancone. But Bérétta (*Les Cités*

Rhodanus, namely, two that flow round a city of the Cavarani Vari,<sup>1</sup> and coming together in a common stream empty into the Rhodanus; and a third, the Sulgas, which mingles its waters with the Rhodanus near the city of Undalum,<sup>2</sup> where in a great battle Gnaeus Ahenobarbus turned many myriads of Celti to flight. And there are in the intervening space<sup>3</sup> the cities of Avenio,<sup>4</sup> Arausio,<sup>5</sup> and Aeria<sup>6</sup>—"an 'Aeria' in reality," says Artemidorus, "because it is situated on a lofty elevation." All the country, however, is level and good for pasturage, except that the stretch from Aeria to Durio<sup>7</sup> has mountainous passes that are narrow and wooded. But where the Isar River and the Rhodanus and the Cevenus Mountain meet, Quintus Fabius Maximus Aemilianus, with less than thirty thousand men all told, cut down two hundred thousand Celti; and on the spot he set up a trophy of white marble, and also two temples, one in honour of Ares, the other in honour of Heracles. From the Isar to Vienna, the metropolis of the Allobroges, situated on the Rhodanus, the distance is three hundred and twenty

<sup>7</sup> A. Bérèta (*op. cit.* 74-100) identifies Durio with what is now Malaucène. Some scholars emend to "Luerio," a place referred to in 4. 6. 3, but otherwise unknown, while others, including Meineke, wrongly emend to Avenio (Avignon).

stadia. Near Vienna, and beyond it, is situated Lugdunum, at which the Arar and the Rhodanus mingle with one another; and the distance to Lugdunum<sup>1</sup> in stadia is, if you go by foot through the territory of the Allobroges, about two hundred, but if by voyage up the river, slightly more than that. Formerly the Allobroges kept up warfare with many myriads of men, whereas now they till the plains and the glens that are in the Alps, and all of them live in villages, except that the most notable of them, inhabitants of Vienna (formerly a village, but called, nevertheless, the "metropolis" of the tribe), have built it up into a city. It is situated on the Rhodanus. This river runs from the Alps in great volume and impetuosity—since on its way out, while passing through the Lemenna Lake, its stream is clearly visible for many stadia. And after coming down into the plains of the country of the Allobroges and Segusiavi, it meets the Arar at Lugdunum, a city of the Segusiavi. The Arar, too, flows from the Alps, since it separates the Sequani from the Aedui and the Lingones; then, later, taking on the waters of the Dubis—a navigable river that runs from the same mountains—it prevails over the Dubis with its name, and though made up of both mingles with the Rhodanus as the "Arar." And, in its turn, the Rhodanus prevails, and runs to Vienna. So the result is, that at first the three rivers run northwards, and then westwards; and then, immediately after they have joined together into one

<sup>1</sup> That is, from Vienna, now Vienne.

The people in question are called "Lingones" by other writers, as well as by Strabo himself (4. 3. 4 and 4. 6. 11).

bed, the stream again takes another turn and runs a southerly course as far as its outlets (although before this it has received the other rivers), and from there begins to make the remainder of its course as far as the sea. Such, then, is approximately the nature of the country which lies between the Alps and the Rhodanus.

12. As for the country which lies on the other side of the river, most of it is occupied by those Volcae who are called Arecomisci. Narbo is spoken of as the naval-station of these people alone, though it would be fairer to add "and of the rest of Celtica"—so greatly has it surpassed the others in the number of people who use it as a trade-centre. Now, although the Volcae border on the Rhodanus, with the Sallyes and also the Cavari stretching along parallel to them on the opposite side of the river, the name of the Cavari prevails, and people are already calling by that name all the barbarians in that part of the country—no, they are no longer barbarians, but are, for the most part, transformed to the type of the Romans, both in their speech and in their modes of living, and some of them in their civic life as well. Again, situated alongside the Arecomisci as far as the Pyrenees, are other tribes, which are without repute and small. Now the metropolis of the Arecomisci is Nemausus, which, although it comes considerably short of Narbo in its throng of foreigners and of merchants, surpasses Narbo in that of citizens; for it has, subject to its authority, twenty-four villages, which are exceptional in their supply of strong men, of stock like its own, and contribute towards its expenses; and it has also what is called the "Latin right,"<sup>1</sup> so that those who

have been thought worthy of the offices of aedile and quaestor at Nemausus are by that preferment Roman citizens, and, on account of this fact, this tribe too is not subject to the orders of the praetors who are sent out from Rome.<sup>1</sup> The city is situated on the road that leads from Iberia into Italy, which, although it is easy to travel in summer, is muddy and also flooded by the rivers in winter and spring. Now some of the streams are crossed by ferries, others by bridges—some made of timber, others of stone. But it is the torrents that cause the annoying difficulties that result from the waters, since, after the melting away of the snows, they sometimes rush down from the Alps even till the summer-time. Of the aforesaid road, the branch<sup>2</sup> that leads straight to the Alps is, as I stated, the short cut through the territory of the Vocontii, whereas that through the Massilian and Ligurian seaboard is indeed longer, although the passes it affords over into Italy are easier, since the mountains begin to lower there. The distance of Nemausus from the Rhodanus—reckoning from a point opposite the town of Tarusco, on the other side of the river—is about a hundred stadia; but from Narbo, seven hundred and twenty. Again, in territory that joins the Cemmenus Mountain, and that takes in also the southern side<sup>3</sup> of the mountain as far as its summits, there live that people of the Volcae who are called Tectosages and also certain others. About these others I shall speak later on.

13. The people who are called Tectosages closely approach the Pyrenees, though they also reach over small parts of the northern side of the Cemmenus;

<sup>1</sup> See 4. 1. 2.

<sup>2</sup> To Strabo, the Cemmenus ran east and west.

<sup>1</sup> Strabo refers to Galatia, a part of Greater Phrygia (12. 8. 1). One of the three Galatian tribes retained the name of "Tectosages," "from the tribe of that name in Celtica" (12. 5. 1).

<sup>2</sup> That is, the Gallic Brennus who made an invasion against Delphi in 278 B.C. with 152,000 infantry and 20,000 cavalry

and the land they occupy is rich in gold. It appears that at one time they were so powerful and had so large a stock of strong men that, when a sedition broke out in their midst, they drove a considerable number of their own people out of the homeland; again, that other persons from other tribes made common lot with these exiles; and that among these are also those people who have taken possession of that part of Phrygia which has a common boundary with Cappadocia and the Paphlagonians.<sup>1</sup> Now as proof of this we have the people who are still, even at the present time, called Tectosages; for, since there are three tribes, one of them—the one that lives about the city of Ancyra—is called “the tribe of the Tectosages,” while the remaining two are the Trocmi and the Tolistobogii. As for these latter peoples, although the fact of their racial kinship with the Tectosages indicates that they emigrated from Celtica, I am unable to tell from what districts they set forth; for I have not learned of any Trocmi or Tolistobogii who now live beyond the Alps, or within them, or this side of them. But it is reasonable to suppose that nothing has been left of them in Celtica on account of their thoroughgoing migrations—just as is the case with several other peoples. For example, some say that the second Brennus<sup>2</sup> who made an invasion against Delphi was a Prausan, but I am unable to say where on earth the Prausans formerly lived, either. And it is further said that the Tectosages shared in the expedition to Delphi; and even the treasures that were found among them in the city of Tolosa by (see Pausanias 10. 19); not the Gallic Brennus who a century before sacked Rome.

<sup>1</sup> Καιπίωνος, and Καιπίωνα (below), are obvious corrections for Σκιπίωνος and Σκιπίωνα; so the editors since Xylander.

Caepio, a general of the Romans, were, it is said, a part of the valuables that were taken from Delphi, although the people, in trying to consecrate them and propitiate the god, added thereto out of their personal properties, and it was on account of having laid hands on them that Caepio ended his life in misfortunes—for he was cast out by his native land as a temple-robber, and he left behind as his heirs female children only, who, as it turned out, became prostitutes, as Timagenes has said, and therefore perished in disgrace. However, the account of Poseidonius is more plausible: for he says that the treasure that was found in Tolosa amounted to about fifteen thousand talents (part of it stored away in sacred enclosures, part of it in sacred lakes), unwrought, that is, merely gold and silver bullion; whereas the temple at Delphi was in those times already empty of such treasure, because it had been robbed at the time of the sacred war by the Phocians; but even if something was left, it was divided by many among themselves; neither is it reasonable to suppose that they reached their homeland in safety, since they fared wretchedly after their retreat from Delphi and, because of their dissensions, were scattered, some in one direction, others in another. But, as has been said both by Poseidonius and several others, since the country was rich in gold, and also belonged to people who were god-fearing and not extravagant in their ways of living, it came to have treasures in many places in Celtica; but it was the lakes, most of all, that afforded the treasures their inviolability, into which the people let down heavy masses of silver or even of gold. At all events, the Romans, after they

mastered the regions, sold the lakes for the public treasury, and many of the buyers found in them hammered mill-stones of silver. And, in Tolosa, the temple too was hallowed, since it was very much revered by the inhabitants of the surrounding country, and on this account the treasures there were excessive, for numerous people had dedicated them and no one dared to lay hands on them.

14. Tolosa is situated on the narrowest part of the isthmus which separates the ocean from the sea that is at Narbo, which isthmus, according to Poseidonius is less than three thousand stadia in width. But it is above all worth while to note again a characteristic of this region which I have spoken of before<sup>1</sup>—the harmonious arrangement of the country with reference, not only to the rivers, but also to the sea, alike both the outer sea<sup>2</sup> and the inner; for one might find, if he set his thoughts upon the matter, that this is not the least factor in the excellence of the regions—I mean the fact that the necessities of life are with ease interchanged by every one with every one else and that the advantages which have arisen therefrom are common to all; but especially so at present, when being at leisure from the weapons of war, the people are tilling the country diligently, and are devising for themselves modes of life that are civil. Therefore, in the cases of this sort, one might believe that there is confirmatory evidence for the workings of Providence, since the regions are laid out, not in a fortuitous way, but as though in accordance with some calculated plan. In the first place, the voyage which the Rhodanus affords inland is a considerable one, even for vessels of great burden, and reaches numerous

parts of the country, on account of the fact that the rivers which fall into it are navigable, and in their turns receive most of the traffic. Secondly, the Rhodanus is succeeded by the Arar, and by the Dubis (which empties into the Arar); then the traffic goes by land as far as the Sequana River; and thence it begins its voyage down to the ocean, and to the Lexobii and Caleti;<sup>1</sup> and from these peoples it is less than a day's run to Britain. But since the Rhodanus is swift and difficult to sail up, some of the traffic from here<sup>2</sup> preferably goes by land on the wagons, that is, all the traffic that is conveyed to the Arvernians and the Liger River—albeit in a part of its course the Rhodanus draws close to these also;<sup>3</sup> still, the fact that the road is level and not long (about eight hundred stadia)<sup>4</sup> is an inducement not to use the voyage upstream,<sup>5</sup> since it is easier to go by land; from here, however, the road is naturally succeeded by the Liger; and it flows from the Cennenus Mountain to the ocean. Thirdly, from Narbo traffic goes inland for a short distance by the Atax River, and then a greater distance by land to the Garumna River; and this latter distance is about eight hundred or seven hundred stadia. And the Garumna, too, flows to the ocean. This, then, is what I have to say about the people who inhabit the dominion of Narbonitis, whom the men of former times named "Celtae"; and it was from the Celtae, I think, that the Galatae as a whole were by

1. Next, I must discuss the Aquitani, and the tribes which have been included within their boundaries,<sup>1</sup> namely, the fourteen Galatic tribes which inhabit the country between the Garumna and the Liger, some of which reach even to the river-land of the Rhone and to the plains of Narbonitis. For, speaking in a general way, the Aquitani differ from the Galatic race in the build of their bodies as well as in their speech; that is, they are more like the Iberians.<sup>2</sup> Their country is bounded by the Garumna River, since they live between this and the Pyrenees. There are more than twenty tribes of the Aquitani, but they are small and lacking in repute; the majority of the tribes live along the ocean, while the others reach up into the interior and to the summits<sup>3</sup> of the Cemmenus Mountains, as far as the Tectosages. But since a country of this size was only a small division, they<sup>4</sup> added to it the country which is between the Garumna and the Liger. These rivers are approximately parallel to the Pyrenees and form with the Pyrenees two parallelograms, since they are bounded on their other sides by the ocean and the Cemmenus Mountains. And the voyage on either of the rivers is, all told, two thousand stadia. The Garumna, after being increased by the waters of three rivers, dis-

charges its waters into the region that is between those Bituriges that are surnamed "Vivisci" and the Santoni—both of them Galatic tribes; for the tribe of these Bituriges is the only tribe of different race that is situated among the Aquitani; and it does not pay tribute to them, though it has an emporium, Burdigala, which is situated on a lagoon that is formed by the outlets of the river. The Liger, however, discharges its waters between the Pictones and the Nannitae. Formerly there was an emporium on this river, called Corbilo, with respect to which Polybius, calling to mind the fabulous stories of Pytheas, has said: "Although no one of all the Massiliotes who conversed with Scipio<sup>1</sup> was able, when questioned by Scipio about Britain, to tell anything worth recording, nor yet any one of the people from Narbo or of those from Corbilo, though these were the best of all the cities in that country, still Pytheas had the hardihood to tell all those falsehoods about Britain." The city of the Santoni, however, is Mediolanium. Now the most of the ocean-coast of the Aquitani is sandy and thin-soiled, thus growing millet, but it is rather unproductive in respect of the other products. Here too is the gulf which, along with that Galatic Gulf which is within the coastline of Narbonitis, forms the isthmus (itself too, like the latter gulf, having the name "Galatic"). The gulf is held by the Tarbelli, in whose land the gold mines are most important of all; for in pits dug only to a slight depth they find slabs of gold as big as the hand can hold, which at times require but little refining; but the rest is gold

<sup>1</sup> The "Convenae" seem to have been refugees from the army of Sertorius, whom Pompey generously assembled together in the territory in question; their city, to which Strabo refers in this passage, was called "Lugdunum Convenarum" (to-day, St. Bertrand de Comminges).

dust and nuggets, the nuggets too requiring no great amount of working. The interior and mountainous country, however, has better soil: first, next to the Pyrenees, the country of the "Convenae" (that is, "assembled rabble"),<sup>1</sup> in which are the city of Lugdunum and the hot springs of the Onesii<sup>2</sup>—most beautiful springs of most potable waters; and, secondly, the country of the Auscii also has good soil.

2. Those tribes between the Garumna and the Liger that belong to Aquitania are, first, the Elui, whose territory begins at the Rhodanus, and then, after them, the Vellavi, who were once included within the boundaries of the Arverni, though they are now ranked as autonomous;<sup>3</sup> then the Arverni, the Lemovices, and the Petrocorii; and, next to these, the Nitiobriges, the Cadurci, and those Bituriges that are called "Cubi";<sup>4</sup> and, next to the ocean, both the Santoni and the Pictones, the former living along the Garumna, as I have said, the latter along the Liger; but the Ruteni and the Gabales closely approach Narbonitis. Now among the Petrocorii there are fine iron-works, and also among the Bituriges Cubi; among the Cadurci, linen

A comparison of 4. 1. 5 (where Strabo speaks specifically of the "autonomy" of the Massiliotes), 4. 1. 12, 4. 6. 4, and the above passage, clearly indicates that the Volcae Arecomisci, the Vellavi, and the Vocontii, were granted a form of autonomy by the Romans—one of the special privileges of that rank being that they were "not subject to the orders of the praetors who are sent out from Rome" (4. 1. 12). Cp. also the government of Messenia under Melanthus (8. 4. 1).

factories; among the Ruteni, silver mines; and the Gabales, also, have silver mines. The Romans have given the "Latin right"<sup>1</sup> to certain of the Aquitani just as they have done in the case of the Auscii and the Convenae.

3. The Arverni are situated on the Liger; their metropolis is Nemossus,<sup>2</sup> a city situated on the Liger. This river, after flowing past Cenabum (the emporium of the Carnutes at about the middle of the voyage,<sup>3</sup> an emporium that is jointly peopled),<sup>4</sup> discharges its waters towards the ocean. As for their former power, the Arverni hold out as a great proof thereof the fact that they oftentimes warred against the Romans, at times with two hundred thousand men, and again, with double that number—with double that number, for example, when they, with Vercingetorix, struggled to a finish against the Deified Caesar; and, before that, also, with two hundred thousand against Maximus Aemilianus, and also, in like manner, against Dometius<sup>5</sup> Ahenobarbus. Now the struggles against Caesar took place near Gergovia (a city of the Arverni, situated on a high mountain), where Vercingetorix was born, and also near Alexia (a city of the Mandubii—a tribe which has a common boundary with the Arverni—and this city too is situated on a high hill, although it is surrounded by mountains and two rivers), in which not only the commander was captured but the war had its end. But the struggles against Maximus Aemilianus took place at the confluence of the Isar and the Rhodanus, called "Augustonemetum" (now Clermont-Ferrand), the city of the Arverni mentioned by Ptolemaeus (2. 7. 12).

Again, the Arverni not only had extended their empire as far as Narbo and the boundaries of Massiliotis, but they were also masters of the tribes as far as the Pyrenees, and as far as the ocean and the Rhenus. Luerius, the father of the Bituitus who warred against Maximus and Dometius, is said to have been so exceptionally rich and extravagant that once, when making a display of his opulence to his friends, he rode on a carriage through a plain, scattering gold and silver coins here and there, for his followers to pick up.<sup>1</sup>

Corais, by a slight emendation (see critical note on opposite page), conjectures "crowds" for "friends," thus harmonizing the account with that of Athenaeus. The conjecture of A. Jacob, however, of "troops" for "friends" is more plausible, on textual as well as on contextual grounds.

<sup>1</sup> Gallia Lugdunensis.

<sup>2</sup> Gallia Belgica.

<sup>3</sup> As Strabo has already said, it was not political divisions (here the divisions of Lugdunensis and Belgica), but physical and ethnic distinctions that geographers treated in detail,

Lugdunum; <sup>1</sup> whereas the remaining parts, including the parts along the ocean, have been classified under another division, I mean that division which is specifically assigned to the Belgae. <sup>2</sup> As for me, however, I shall point out the separate parts in a rather general way. <sup>3</sup>

2. Lugdunum itself, then, (a city founded at the foot of a hill at the confluence of the River Arar and the Rhodanus), is occupied by the Romans. And it is the most populous of all the cities of Celtica except Narbo; for not only do people use it as an emporium, but the Roman governors coin their money there, both the silver and the gold. Again, the temple that was dedicated to Caesar Augustus by all the Galatae in common is situated in front of this city at the junction of the rivers. And in it is a noteworthy altar, bearing an inscription of the names of the tribes, sixty in number; and also images from these tribes, one from each tribe, and also another large altar. <sup>4</sup> The city of Lugdunum presides over the tribe of the Segusiavi, which tribe is situated between the Rhodanus and the Dubis. The tribes that come next in order after the Segusiavi, I mean those which together stretch towards the Rhenus, are bounded partly by the Dubis and partly by the Arar. Now these rivers too, as I have said before, <sup>5</sup> first run down from the Alps, and then, falling into one stream, run down into the Rhodanus; and there is still another river, Sequana

since the political divisions made by the Romans varied, and hence were only referred to in a summary way by the geographer (see 4. 1. 1).

<sup>4</sup> C. Müller emends the Greek text to read "and also an image of Augustus"; Meineke, to read "and also a great statue," i. e. of Augustus. <sup>5</sup> 4. 1. 11.

by name, which likewise has its sources in the Alps. It flows into the ocean, however, running parallel to the Rhenus, through a tribe of like name,<sup>1</sup> whose country joins the Rhenus in its eastern parts, but in the opposite parts, the Arar; and it is from their country that the finest of salted hog-meat is brought down and shipped to Rome. Now between the Dubis and the Arar dwells the tribe of the Aedui, with their city of Cabyllinum, on the Arar, and their garrison of Bibracte. (The Aedui were not only called kinsmen of the Romans,<sup>2</sup> but they were also the first of the peoples in that country to apply for their friendship and alliance.) But across the Arar dwell the Sequani, who, for a long time, in fact, had been at variance with the Romans as well as with the Aedui. This was because they often joined forces with the Germans in their attacks upon Italy; aye, and they demonstrated that theirs was no ordinary power: they made the Germans strong when they took part with them and weak when they stood aloof. As regards the Aedui, not only were the Sequani at variance with them for the same reasons, but their hostility was intensified by the strife about the river that separates them, since each tribe claimed that the Arar was its private property and that the transportation tolls belonged to itself. Now, however, everything is subject to the Romans.

3. As for the country that is on the Rhenus, the first of all the peoples who live there are the Elvetii,<sup>3</sup>

<sup>1</sup> Strabo wrongly thought the Sequana ran through the country of the Sequani.

<sup>2</sup> Cæsar (*De Bello Gallico* 1. 33) says "the Aedui were often called by the Senate brethren and kinsmen."

<sup>3</sup> Usually spelled "Helvetii."

in whose territory, on Mount Adula, are the sources of the river. Mount Adula is a part of the Alps, and from it flows also the River Addua,<sup>1</sup> in the opposite direction, that is, towards Cisalpine Celtica, and fills Lake Larius (near which the city of Comum has been founded), and then, flowing on from Lake Larius, contributes its waters to those of the Padus (matters about which I shall speak later on). The Rhœnus, too, spreads into great marshes and a great lake, which lake is touched by the territory of both the Rhaeti and the Vindelici (certain of the peoples who live in the Alps and also beyond the Alps). Asinius says that the length of the river is six thousand stadia, but it is not. In fact, it could only slightly exceed the half of that in a straight line, while the addition of one thousand stadia would be quite sufficient for the windings. For not only is it swift, and on this account also hard to bridge, but after its descent from the mountains runs the rest of the way with even slope through the plains. How, then, could it remain swift and violent, if to the even slope of the river we added numerous long windings? He further says it has only two mouths, after first finding fault with those who say it has more than that. So then, both this river and the Sequana encircle somewhat of territory within their windings, but not so much as that. Both rivers flow from the southern parts towards the north; and in front of them lies Britain, which is near enough to the Rhœnus for Cantium, which is the eastern cape of the island, to be visible from it, though it is slightly farther off from the Sequana. Here, too, the Deified

<sup>1</sup> Strabo could not have meant by "Here" the mouth of the Sequana (which the more Greek text seems to imply),

Caesar established his navy-yard when he sailed to Britain.<sup>1</sup> The part of the Sequana that is navigated by those who receive the cargoes from the Arar is slightly longer than that of the Liger and that of the Garunna; but the distance from Lugdunum<sup>2</sup> to the Sequana is a thousand stadia, and that from the mouths of the Rhodanus to Lugdunum is less than double this distance. It is said also that the Elvetii, although rich in gold, none the less turned themselves to robbery upon seeing the opulence of the Cimbri; but that on their campaigns two of their tribes (there were three) were obliterated. But still the number of the descendants from what was left of them was shown by their war against the Deified Caesar, in which about four hundred thousand lives were destroyed, although Caesar allowed the rest of them, about eight thousand, to escape, so as not to abandon the country, destitute of inhabitants, to the Germans, whose territory bordered on theirs.

4. After the Elvetii, along the Rhenus, dwell the Sequani and the Mediomatrici, in whose territory are situated the Tribocci, a Germanic tribe which crossed the river from their homeland. Mount Jura is in the territory of the Sequani; it marks the boundary between the Elvetii and the Sequani. So it is beyond the Elvetii and the Sequani, towards the west, that the Aedui and the Lingones dwell; and beyond the Mediomatrici, that the Leuci and a

part of the Lingones dwell. But those tribes between the Liger and the Sequana Rivers that are on the far side of the Rhodanus and the Arar are situated side by side, towards the north, with both the Allobroges and the people round Lugdunum; and of these tribes the most conspicuous are those of the Arverni and the Carnutes, through both of whose territories the Liger runs on its way out to the ocean. The passage across to Britain from the rivers of Celtica is three hundred and twenty stadia; for if you put to sea on the ebb-tide at nightfall, you land upon the island about the eighth hour on the following day. After the Mediomatrici and the Tribocci, along the Rhenus, dwell the Treveri, near whom the bridge has been built by the Roman officers who are now conducting the Germanic war.<sup>1</sup> The Ubii used to live opposite this region, across the Rhenus, though by their own consent they were transferred by Agrippa to the country this side the Rhenus. Next after the Treveri are the Nervii, who are also a Germanic tribe. Last come the Menapii, who dwell on both sides of the river near its mouths, in marshes and woods (not of tall timber, but dense and thorny). It is opposite to these that the Sugambri are situated, a Germanic people. But beyond this whole river-country are those Germans who are called the Suevi and excel all the others in power and numbers (the people driven out by the Suevi in our time have been fleeing for refuge to this side of the Rhenus). And other peoples, also, lord it in different places, and in their turn take up the tinders of war, but the foremost are always put down.<sup>2</sup>

One thinks of the campaigns of Drusus Germanicus (7. 1. 3), of Varus (7. 1. 4), or of Germanicus the Younger (7. 1. 4).

<sup>1</sup> By the Romans, apparently.

## GEOGRAPHY, 4. 3. 5

5. West of the Treveri and the Nervii dwell the Senones and the Remi, and farther on, the Atrebatii and the Eburones; and after the Menapii, on the sea, are, in their order, the Morini, the Bellovaci, the Ambiani, the Suessiones, and the Caleti, as far as the outlet of the Sequana River. Both the country of the Morini and that of the Atrebatii and Eburones resemble that of the Menapii; for much of it, though not so much as the historians have said (four thousand stadia), is a forest, consisting of trees that are not tall; the forest is called Arduenna. At the time of hostile onsets they used to intertwine the withes of the brushwood, since the withes were thorny, and thus block the passage of the enemy.<sup>1</sup> In some places they also used to fix stakes in the ground—themselves, with their whole families, slinking away into the depths of the forest, for they had small islands in their marshes. Now although the refuge they took was safe for them in the rainy seasons, they were easily captured in the dry seasons. But as it is, all the peoples this side the Rhenus are living in a state of tranquillity and are submissive to the Romans. The Parisii live round about the Sequana River, having an island in the river and a city called Lucotocia; and so do the Meldi and the Lexovii—these latter beside the ocean. But the most noteworthy of all the tribes in this region of Celtica is that of the Remi; their metropolis, Duricortora, is most thickly settled and is the city that entertains the Roman governors.

<sup>1</sup> Caesar (*De Bello Gallico* 2. 17) describes this more fully, saying that they first cut into saplings and bent them over, and then intertwined them with brambles and thorns, thus making wall-like hedges that could neither be penetrated nor seen through.

1. After the aforesaid tribes, the rest are tribes of those Belgae who live on the ocean-coast. Of the Belgae, there are, first, the Veneti who fought the naval battle with Caesar; for they were already prepared to hinder his voyage to Britain, since they were using the emporium there. But he easily defeated them in the naval battle, making no use of ramming (for the beams<sup>1</sup> were thick), but when the Veneti bore upon him with the wind, the Romans hauled down their sails by means of pole-hooks;<sup>2</sup> for, on account of the violence of the winds, the sails were made of leather, and they were hoisted by chains instead of ropes. Because of the ebb-tides, they make their ships with broad bottoms, high sterns, and high prows; they make them of oak (of which they have a plentiful supply), and this is why they do not bring the joints of the planks together but leave gaps; they stuff the gaps full of sea-weed, however, so that the wood may not, for lack of moisture, become dry when the ships are hauled up, because the sea-weed is naturally rather moist, whereas the oak is dry and without fat. It is these Veneti, I think, who settled the colony that is on the Adriatic (for about all the Celti that are in Italy migrated from the transalpine land, just as did the Boii and Senones), although, on account of the likeness of name, people call them Paphlagonians.<sup>3</sup> I

<sup>1</sup> That is, in the ships of the Veneti. The beams, according to Caesar (*De Bello Gallico* 3. 13), were a foot thick.

<sup>2</sup> "Sharp pointed hooks inserted in, and fastened to, long poles," Caesar says (*loc. cit.*).

<sup>3</sup> Strabo refers to the "Kneti," a Paphlagonian tribe (op. 1. 3. 2, 1. 3. 21, and 5. 1. 4).

do not speak positively, however, for with reference to such matters probability suffices. Secondly, there are the Osismii (whom Pytheas calls the Ostimii), who live on a promontory that projects quite far out into the ocean, though not so far as he and those who have trusted him say. But of the tribes that are between the Sequana and the Liger, some border on the Sequani, others on the Arverni.

2. The whole race which is now called both "Gallic" and "Galatic" is war-mad, and both high-spirited and quick for battle, although otherwise simple and not ill-mannered. And therefore, if roused, they come together all at once for the struggle, both openly and without circumspection, so that for those who wish to defeat them by stratagem they become easy to deal with (in fact, irritate them when, where, or by what chance pretext you please, and you have them ready to risk their lives, with nothing to help them in the struggle but might and daring); whereas, if coaxed, they so easily yield to considerations of utility that they lay hold, not only of training in general, but of language-studies as well.<sup>1</sup> As for their might, it arises partly from their large physique and partly from their numbers. And on account of their trait of simplicity and straightforwardness they easily come together in great numbers, because they always share in the vexation of those of their neighbours whom they think wronged. At the present time they are all at peace, since they have been enslaved and are living in accordance with the commands of the Romans who captured them, but it is from the early

times that I am taking this account of them, and also from the customs that hold fast to this day among the Germans. For these peoples are not only similar in respect to their nature and their governments, but they are also kinsmen to one another; and, further, they live in country that has a common boundary, since it is divided by the River Rhene, and the most of its regions are similar (though Germany is more to the north), if the southern regions be judged with reference to the southern and also the northern with reference to the northern. But it is also on account of this trait<sup>1</sup> that their migrations easily take place, for they move in droves, army and all, or rather they make off, households and all, whenever they are cast out by others stronger than themselves. Again, the Romans conquered these people much more easily than they did the Iberians; in fact, the Romans began earlier, and stopped later, carrying on war with the Iberians, but in the meantime defeated all these—I mean all the peoples who live between the Rhene and the Pyrenees Mountains. For, since the former were wont to fall upon their opponents all at once and in great numbers, they were defeated all at once, but the latter would husband their resources and divide their struggles, carrying on war in the manner of brigands, different men at different times and in separate divisions.<sup>2</sup> Now although they are all<sup>3</sup> fighters by nature, they are better as cavalry than as infantry; and the best cavalry-force the Romans have comes from these people. However, it is always those who live more to the north and along the ocean-coast that are the more warlike

bravest (who have been divided into fifteen tribes, the tribes that live along the ocean between the Rhenus and the Liger); consequently they alone could hold out against the onset of the Germans—the Cimbri and Teutones.<sup>1</sup> But of the Belgae themselves, they say, the Bellovaci are bravest, and after them the Suessiones. As for the largeness of the population,<sup>2</sup> this is an indication: it is found upon inquiry,<sup>3</sup> they say, that there are as many as three hundred thousand of those Belgae (of former times) who are able to bear arms; and I have already told<sup>4</sup> the number of the Elvetii, and of the Arverni, and of their allies,—from all of which the largeness of the population is manifest, as is also the thing of which I spoke above<sup>5</sup>—the excellence of the women in regard to the bearing and nursing of children. The Gallic people wear the “sagus,”<sup>6</sup> let their hair grow long,<sup>7</sup> and wear tight breeches<sup>8</sup>; instead of tunics<sup>9</sup> they wear slit<sup>10</sup> tunics that have sleeves and reach as far as the private parts and the buttocks. The wool of their sheep, from which they weave the coarse “sagi” (which they<sup>11</sup> call “laenae”), is not only rough, but also flocky at the surface; the Romans, however, even in the most northerly parts<sup>12</sup> raise skin-clothed<sup>13</sup> flocks with wool that is sufficiently fine. The Gallic armour is commensurate with the

<sup>1</sup> A Celtic word; in Latin, "matare."

<sup>2</sup> "Grosphus" is the Greek word Polybius (9 22) uses for a kind of spear used by the Roman "flying troops" ("velites"). "The spear," he says, "has a wooden haft of about two cubits and is about a finger's breadth in thickness."

<sup>3</sup> In Julius Caesar's day (cp. *De Bello Gallico* 6. 11).

large size of their bodies: a long sabre, which hangs along the right side, and a long oblong shield, and spears in proportion, and a "madaris,"<sup>1</sup> a special kind of javelin. But some of them also use bows and slings. There is also a certain wooden instrument resembling the "grosphus"<sup>2</sup> (it is hurled by hand, not by thong, and ranges even farther than an arrow), which they use particularly for the purposes of bird-hunting. Most of them, even to the present time, sleep on the ground, and eat their meals seated on beds of straw. Food they have in very great quantities, along with milk and flesh of all sorts, but particularly the flesh of hogs, both fresh and salted. Their hogs run wild, and they are of exceptional height, boldness, and swiftness; at any rate, it is dangerous for one unfamiliar with their ways to approach them, and likewise, also, for a wolf. As for their houses, which are large and dome-shaped, they make them of planks and wicker, throwing over them quantities of thatch. And their flocks of sheep and herds of swine are so very large that they supply an abundance of the "sagi" and the salt-meat, not only to Rome, but to most parts of Italy as well. The greater number of their governments used to be aristocratic<sup>3</sup>—although in the olden time only one leader was chosen, annually; and so, likewise, for war, only one man was declared general by the common people.<sup>4</sup> But now they give heed, for the most part, to the commands of the Romans. There is a procedure that takes place in their assemblies which is peculiar to them: if a man disturbs the speaker and heckles him, the sergeant-at-arms

<sup>4</sup> In Caesar's day (*De Bello Gallico* 6. 18) the common people were treated almost as slaves and were never consulted.

approaches him with drawn sword, and with a threat commands him to be silent; if he does not stop, the sergcant-at-arms does the same thing a second time, and also a third time, but at last cuts off enough of the man's "sagus" to make it useless for the future. But as for their custom relating to the men and the women (I mean the fact that their tasks have been exchanged, in a manner opposite to what obtains among us), it is one which they share in common with many other barbarian peoples.

4. Among all the Gallic peoples, generally speaking, there are three sets of men who are held in exceptional honour; the Bards, the Vates and the Druids.<sup>1</sup> The Bards are singers and poets; the Vates, diviners and natural philosophers; while the Druids, in addition to natural philosophy, study also moral philosophy. The Druids are considered the most just of men, and on this account they are entrusted with the decision, not only of the private disputes, but of the public disputes as well; so that, in former times, they even arbitrated cases of war and made the opponents stop when they were about to line up for battle, and the murder cases, in particular, had been turned over to them for decision. Further, when there is a big yield from these cases,<sup>2</sup> there is forthcoming a big yield from the land too, as they think. However, not only the Druids, but others as well,<sup>3</sup> say that men's souls, and also the universe, are indestructible,<sup>4</sup> although both fire and water will at some time or other prevail over them.

5. In addition to their trait of simplicity and high-spiritedness,<sup>1</sup> that of witlessness and boastfulness is much in evidence, and also that of fondness for ornaments; for they not only wear golden ornaments—both chains round their necks and bracelets round their arms and wrists—but their dignitaries wear garments that are dyed in colours and sprinkled with gold. And by reason of this levity of character they not only look insufferable when victorious, but also scared out of their wits when worsted. Again, in addition to their witlessness, there is also that custom, barbarous and exotic, which attends most of the northern tribes—I mean the fact that when they depart from the battle they hang the heads of their enemies from the necks of their horses, and, when they have brought them home, nail the spectacle to the entrances of their homes. At any rate, Poseidonius says that he himself saw this spectacle in many places, and that, although at first he loathed it, afterwards, through his familiarity with it, he could bear it calmly. The heads of enemies of high repute, however, they used to embalm in cedar-oil and exhibit to strangers, and they would not deign to give them back even for a ransom of an equal weight of gold. But the Romans put a stop to these customs, as well as to all those connected with the sacrifices and divinations that are opposed to our usages. They used to strike a human being, whom they had devoted to death,<sup>2</sup> in the back with a sabre, and then divine from his death-struggle. But they would not sacrifice without the Druids.<sup>3</sup> We are told of still other

kinds of human sacrifices; for example, they would shoot victims to death with arrows, or impale them in the temples, or, having devised a colossus of straw and wood, throw into the colossus cattle and wild animals of all sorts and human beings, and then make a burnt-offering of the whole thing.<sup>1</sup>

6. In the ocean, he<sup>2</sup> says, there is a small island, not very far out to sea, situated off the outlet of the Liger River; and the island is inhabited by the women of the Samnitae, and they are possessed by Dionysus and make this god propitious by appeasing him with mystic initiations as well as other sacred performances; and no man sets foot on the island, although the women themselves, sailing from it, have intercourse with the men and then return again. And, he says, it is a custom of theirs once a year to unroof the temple and roof it again on the same day before sunset, each woman bringing her load to add to the roof; but the woman whose load falls out of her arms is rent to pieces by the rest, and they carry the pieces round the temple with the cry of "Ev-ah,"<sup>3</sup> and do not cease until their frenzy ceases; and it is always the case, he says, that some one jostles the woman who is to suffer this fate.<sup>4</sup> But the following story which Artemidorus has told about the case of the crows is still more fabulous: there is a certain harbour on the ocean-coast, his story goes, which is surnamed "Two Crows," and in this harbour are to be seen two crows, with their right wings somewhat white; so the men who have

disputes about certain things come here, put a plank on an elevated place, and then throw on barley cakes, each man separately; the birds fly up, eat some of the barley cakes, scatter the others; and the man whose barley cakes are scattered wins his dispute. Now although this story is more fabulous, his story about Demeter and Core<sup>1</sup> is more credible. He says that there is an island near Britain on which sacrifices are performed like those sacrifices in Samothrace that have to do with Demeter and Core. And the following, too, is one of the things that are believed, namely, that in Celtica there grows a tree like a fig-tree, and that it brings forth a fruit similar to a Corinthian-wrought capital of a column; and that, if an incision be made, this fruit exudes a sap which, as used for the smearing of arrows, is deadly. And the following, too, is one of the things that are repeated over and over again, namely, that not only are all Celti fond of strife,<sup>2</sup> but among them it is considered no disgrace for the young men to be prodigal of their youthful charms.<sup>3</sup> Euphorus, in his account, makes Celtica so excessive in its size that he assigns to the regions of Celtica most of the regions, as far as Gades, of what we now call Iberia; further, he declares that the people are fond of the Greeks, and specifies many things about them that do not fit the facts of to-day. The following, also, is a thing peculiar to them, that they endeavour not to grow fat or pot-bellied, and any young man who exceeds the standard measure of the girdle is punished. So much for Transalpine Celtica.

<sup>1</sup> So says Diodorus Siculus (5. 28).

<sup>2</sup> Diodorus Siculus (5. 32) says the same, and more, of this immorality among the Celta.

1. BRITAIN is triangular in shape; and its longest side<sup>1</sup> stretches parallel to Celtica, neither exceeding nor falling short of the length of Celtica; for each of the two lengths is about four thousand three hundred—or four hundred—stadia: the Celtic length that extends from the outlets of the Rhenus as far as those northern ends of the Pyrenees that are near Aquitania, as also the length that extends from Cantium (which is directly opposite the outlets of the Rhenus), the most easterly point of Britain, as far as that westerly end of the island which lies opposite the Aquitanian Pyrenees. This, of course, is the shortest distance from the Pyrenees to the Rhenus, since, as I have already said,<sup>2</sup> the greatest distance is as much as five thousand stadia; yet it is reasonable to suppose that there is a convergence from the parallel position which the river and the mountains occupy with reference to each other,<sup>3</sup> since at the ends where they approach the ocean there is a curve in both of them.

2. There are only four passages which are habitually used in crossing from the mainland to the island, those which begin at the mouths of the rivers—the Rhenus, the Sequana, the Liger, and the Garumna. However, the people who put to sea from the regions that are near the Rhenus make the voyage, not from the mouths themselves, but from the coast of those Morini who have a common boundary with the Menapii. (On their coast, also, is Itium, which the Deified Caesar used as a naval station when he set sail for the island.<sup>4</sup> He put to sea by

<sup>1</sup> Cp. the time given in 4. 3. 4. Caesar made his first voyage to Britain (*op. cit.* 4. 23) between "about the third watch" (midnight) and "the fourth hour of the day" (10 A.M.); the second (*op. cit.* 5. 8), between "about sun-

night and landed on the following day about the fourth hour,<sup>1</sup> thus having completed three hundred and twenty stadia<sup>2</sup> in his voyage across; and he found the grain still in the fields.) Most of the island is flat and overgrown with forests, although many of its districts are hilly. It bears grain, cattle, gold, silver, and iron. These things, accordingly, are exported from the island, as also hides, and slaves, and dogs that are by nature suited to the purposes of the chase; the Celti, however, use both these and the native dogs for the purposes of war too. The men of Britain are taller than the Celti, and not so yellow-haired, although their bodies are of looser build. The following is an indication of their size: I myself, in Rome, saw mere lads towering as much as half a foot above the tallest people in the city, although they were bandy-legged and presented no fair lines anywhere else in their figure. Their habits are in part like those of the Celti, but in part more simple and barbaric<sup>3</sup>—so much so that, on account of their inexperience, some of them, although well supplied with milk, make no cheese; and they have no experience in gardening or other agricultural pursuits. And they have powerful chieftains in their country.<sup>4</sup> For the purposes of war they use chariots for the most part, just as some of the Celti do. The forests are their cities; for they fence in a

<sup>1</sup> Cp. Caesar *op. cit.* 5. 21.

<sup>2</sup> It was a question of (1) pasturage and (2) defence against the enemy.

<sup>3</sup> Caesar (*op. cit.* 5. 22) says "on account of sudden commotions in Gaul," referring to his *second* return to the continent.

<sup>4</sup> This loss took place before Caesar's *first* return, "on the day when the moon is wont to make the maximum tides in

spacious circular enclosure with trees which they have felled,<sup>1</sup> and in that enclosure make huts for themselves and also pen up their cattle—not, however, with the purpose of staying a long time.<sup>2</sup> Their weather is more rainy than snowy; and on the days of clear sky fog prevails so long a time that throughout a whole day the sun is to be seen for only three or four hours round about midday. And this is the case also among the Morini and the Menapii and all the neighbours of the latter.

3. The Deified Caesar crossed over to the island twice, although he came back in haste, without accomplishing anything great or proceeding far into the island, not only on account of the quarrels that took place in the land of the Celta, among the barbarians and his own soldiers as well,<sup>3</sup> but also on account of the fact that many of his ships had been lost at the time of the full moon, since the ebb-tides and the flood-tides got their increase at that time.<sup>4</sup> However, he won two or three victories over the Britons, albeit he carried along only two legions of his army; and he brought back hostages, slaves, and quantities of the rest of the booty. At present, however, some of the chieftains there, after procuring the friendship of Caesar Augustus by sending embassies and by paying court to him,<sup>5</sup> have not only dedicated offerings in the Capitulum, but have also managed to make the whole of the island virtually Roman

the ocean" (*op. cit.* 4. 28-29). For Strabo's discussion of those tides, see 3. 5. 8.

<sup>5</sup> Augustus had intended to subjugate Britain, but went no farther than Gaul (Dio Cassius 53. 22). Caesar mentions (*Monumentum Ancyranum*) two British chieftains who came to him as suppliants, "Dumnobellaunus" and "Tin—" (or "Tine—").

property. Further, they submit so easily to heavy duties, both on the exports from there to Celtica and on the imports from Celtica (these latter are ivory chains and necklaces, and amber-gems<sup>1</sup> and glass vessels and other petty wares of that sort), that there is no need of garrisoning the island; for one legion, at the least, and some cavalry would be required in order to carry off tribute from them, and the expense of the army would offset the tribute-money;<sup>2</sup> in fact, the duties must necessarily be lessened if tribute is imposed, and, at the same time, dangers be encountered, if force is applied.

4. Besides some small islands round about Britain, there is also a large island, Ierne,<sup>3</sup> which stretches parallel to Britain on the north, its breadth being greater than its length.<sup>4</sup> Concerning this island I have nothing certain to tell, except that its inhabitants are more savage<sup>5</sup> than the Britons, since they are man-eaters as well as heavy eaters,<sup>6</sup> and since, further, they count it an honourable thing, when their fathers die, to devour them, and openly to have intercourse, not only with the other women, but also with their mothers and sisters; but I am saying this only with the understanding that I have no trust-

<sup>1</sup> "Linguria" (Strabo's word) means gems of red amber, like the red amber ("lingurium" 4. 6. 2) on the coast of Liguria, from which country it gets its name (Ridgeway, *Origin of Currency*, p. 110).

<sup>6</sup> Some of the editors read "herb-eaters" instead of "heavy eaters"—perhaps rightly.

worthy witnesses for it; and yet, as for the matter of man-eating, that is said to be a custom of the Scythians also, and, in cases of necessity forced by sieges, the Celti,<sup>1</sup> the Iberians,<sup>2</sup> and several other peoples are said to have practised it.<sup>3</sup>

5. Concerning Thule<sup>4</sup> our historical information is still more uncertain, on account of its outside position;<sup>5</sup> for Thule, of all the countries that are named, is set farthest north. But that the things which Pytheas has told about Thule, as well as the other places in that part of the world, have indeed been fabricated by him, we have clear evidence from the districts that are known to us,<sup>6</sup> for in most cases he has falsified them, as I have already said before,<sup>7</sup> and hence he is obviously more false concerning the districts which have been placed outside the inhabited world. And yet, if judged by the science of the celestial phenomena<sup>8</sup> and by mathematical theory, he might possibly seem to have made adequate use of the facts as regards the people who live close to the frozen zone,<sup>9</sup> when he says that, of the animals and domesticated fruits, there is an utter dearth of some and a scarcity of the others, and that the people live on millet and other herbs, and on fruits and roots; and where there are gruin and honey, the people get their

<sup>4</sup> Strabo has insisted (2. 5. 8) that the northern limit of the inhabited world should be placed in Ierne (Ireland), and that therefore Thule falls outside.

<sup>5</sup> Strabo means "from what he has told us about the districts that are known to us" (cp. 1. 4. 8).

<sup>7</sup> 1. 4. 3.

<sup>8</sup> See 1. 1. 15, and footnote 2.

<sup>9</sup> Strabo speaks of "the people who live close to the frozen zone" only for argument's sake; he himself regards such people, as well as those farther north, as non-existent so far as geography is concerned (2. 5. 43).

1. AFTER Transalpine Celtica and the tribes which hold this country, I must tell about the Alps themselves and the people who inhabit them, and then about the whole of Italy, keeping the same order in my description as is given me by the nature of the country. The beginning, then, of the Alps is not at the Port of Monoecus, as some have told us, but at the same districts as the beginning of the Apennine mountains, namely, near Genua, the emporium of the Ligures, and what is called Vada (that is, "Shoals") Sabatorum:<sup>4</sup> for the Apennines begin at Genua, and the Alps have their beginning at Sabata; and the distance, in stadia, between Genua and Sabata is two hundred and sixty; then, after three hundred and seventy stadia from Sabata, comes the town of Albingaunum (its inhabitants are called Ligures Ingauni); and thence, to the Port of Monoecus, four hundred and eighty stadia. Further, in this last

<sup>1</sup> Diodorus Siculus (5. 21), who, like Strabo, quotes Pytheas through Posidonius, makes a similar reference to the Britons, saying that the Britons "cut off the ears of grain and store them in houses that are roofed over, and pluck the ears from day to day. The threshing floors with which Strabo and Diodorus were familiar were in the open air, *i. e.* in Greece and Italy.

interval there is a city of fair size, Albium Intemelium, and its occupants are called Intemelii. And indeed it is on the strength of these names that writers advance a proof that the Alps begin at Sabata; for things "Alpian" were formerly called "Albian," as also things "Alpionian,"<sup>1</sup> and, in fact, writers add that still to-day the high mountain<sup>2</sup> among the Iapodes which almost joins Mount Oena and the Alps is called "Albius," thus implying that the Alps have stretched as far as that mountain.

2. Since, then, the Ligures were partly Ingauni and partly Intemelii, writers add, it was reasonable for their settlements on the sea to be named, the one, Albium (the equivalent of Alpium) Intemelium, and the other, more concisely, Albingaunum. Polybius, however, adds to the two aforesaid tribes of the Ligures both that of the Oxybii and that of the Decietae. Speaking generally, this whole coastline, from the Port of Monoecus as far as Tyrrhenia, is not only exposed to the wind but harbourless as well, except for shallow mooring-places and anchorages. And lying above it are the enormous beetling cliffs of the mountains, which leave only a narrow pass next to the sea. This country is occupied by the Ligures, who live on sheep, for the most part, and milk, and a drink made of barley; they pasture their flocks in the districts next to the sea, but mainly in the mountains. They have there in very great quantities timber that is suitable for ship-building, with trees so large that the diameter of their thickness is sometimes found to be eight feet. And many of these trees, even in the variegation of the grain, are not

<sup>2</sup> Dioscurides (5. 48) gave a formula for the mixture: one or two ounces of pitch to about six gallons of new wine. It is the resinated wine still used in Greece.

<sup>3</sup> Aristotle (*Hist. An.* 8. 24) and Pliny (*Nat. Hist.* 8. 69) define the "ginnus" as the stunted foal of a mare by a mule. But here the term is simply colloquial for a stunted animal, whether horse or mule. The Latin word is "hinus." Cp. English "ginny" and "flying-jenny."

<sup>4</sup> The sagus was a kind of coarse cloak. Cp. 4. 4. 3.

These, accordingly, the people bring down to the emporium of Genua, as well as flocks, hides and honey, and receive therefor a return-cargo of olive oil and Italian wine (the little wine they have in their country is mixed with pitch,<sup>2</sup> and harsh). And this is the country from which come not only the so-called "ginni"—both horses and mules,<sup>3</sup>—but also the Ligurian tunics and "sagi."<sup>4</sup> And they also have in their country excessive quantities of amber,<sup>5</sup> which by some is called "electrum." And although, in their campaigns, they are no good at all as cavalrymen, they are excellent heavy-armed soldiers and skirmishers; and, from the fact that they use bronze shields, some infer that they are Greeks.

3. The Port of Monoecus affords a mooring-place for no large ships, nor yet for a considerable number; and it has a temple of Heracles "Monoecus,"<sup>6</sup> as he is called; and it is reasonable to conjecture from the name<sup>7</sup> that the coastal voyages of the Massiliotes reach even as far as the Port of Monoecus.<sup>8</sup> The distance from the Port of Monoecus to Antipolis is a

corruption) means "the Solitary." The epithet was given to Heracles, according to Servius (note on the *Aeneid* 6. 829), either because Heracles drove out the inhabitants of Liguria and remained sole possessor of the land, or because it was not the custom to associate other divinities with him in the temples dedicated to him; but according to Prof. Freeman's suggestion to Tozer (*Selections from Strabo*, p. 138), the epithet probably refers to the solitary position of the place, as being the last of the Greek cities on this coast.

<sup>1</sup> The name is Greek.

<sup>2</sup> Strabo means that the Port of Monoecus probably came under the influence of Massilia. He has already said that Nicaea, which is only a few miles west of Monoecus, belongs to Massilia (4. 1. 9).

little more than two hundred stadia. As for the stretch of country which begins at Antipolis and extends as far as Massilia or a little farther, the tribe of the Sallyes inhabits the Alps that lie above the seaboard and also—promiscuously with the Greeks—certain parts of the same seaboard. But though the early writers of the Greeks call the Sallyes “Ligues,”<sup>1</sup> and the country which the Massiliotes hold, “Ligustica,” later writers name them “Celtoligues,” and attach to their territory all the level country as far as Luerio and the Rhodanus, the country from which the inhabitants, divided into ten parts, used to send forth an army, not only of infantry, but of cavalry as well. These were the first of the Transalpine Celti that the Romans conquered, though they did so only after carrying on war with both them and the Ligures for a long time—because the latter had barred all the passes leading to Iberia that ran through the seaboard. And, in fact, they kept making raids both by land and sea, and were so powerful that the road was scarcely practicable even for great armies. And it was not until the eightieth year of the war that the Romans succeeded, though only with difficulty, in opening up the road for a breadth<sup>2</sup> of only twelve stadia to those travelling on public business. After this, however, they defeated them all, and, having imposed a tribute upon them, administered the government themselves.

4. After the Sallyes come the Albienses and the Albiocci and the Vocontii, who occupy the northerly parts of the mountains. But the Vocontii, stretching

<sup>1</sup> Not from the coastline; we should say that the Romans secured a “right of way.”

<sup>4</sup> i. e., are autonomous with "Latin right" (see 3. 2. 16, 4. 1. 9, 5. 1. 1).

<sup>5</sup> There were two Durias Rivers, namely, the Durias Major (now Dora Baltea) and Durias Minor (now Dora Riparia), both of which emptied into the Padus (Po). The Durias

alongside the others, reach as far as the Allobroges; they have glens in the depths of their mountainous country that are of considerable size and not inferior to those which the Allobroges have. Now the Allobroges and the Ligures are ranked as subject to the praetors who come to Narbonitis, but the Vocontii (as I said of the Volcae who live round about Neunusus) are ranked as autonomous.<sup>1</sup> Of the Ligures who live between the Varus River and Genua, those who live on the sea are the same as the Italiotes,<sup>2</sup> whereas to the mountaineers a praefect of equestrian rank is sent—as is done in the case of other peoples who are perfect barbarians.

5. After the Vocontii come the Iconii and the Tricorii; and after them the Medulli, who hold the loftiest peaks. At any rate, the steepest height of these peaks is said to involve an ascent of a hundred stadia, and an equal number the descent thence to the boundaries of Italy. And up in a certain hollowed-out region stands a large lake, and also two springs which are not far from one another. One of these springs is the source of the Druentia, a torrential river which dashes down towards the Rhodanus, and also of the Durias, which takes the opposite direction, since it first courses down through the country of the Salassi into Cisalpine Celtica and then mingles with the Padus;<sup>3</sup> while from the other spring there issues forth, considerably lower than the region

Major passed through the country of the Salassi, who lived round about *Angusta Praetoria Salassorum* (now Aosta), while the Durias Minor rose near the Druentia (Durance) and emptied into the Padus at what is now Turin, some twenty miles west of the mouth of the Durias Major. Strabo, it appears, confuses the two rivers, for he is obviously talking about the Durias Minor.

above-mentioned, the Padus itself, large and swift, although as it proceeds it becomes larger and more gentle in its flow; for from the time it reaches the plains it is increased from many streams and is thus widened out; and so, because of the spreading out of its waters, the force of its current is dispersed and blunted; then it empties into the Adriatic Sea, becoming the largest of all the rivers in Europe except the Ister. The situation of the Medulli is, to put it in a general way, above the confluence of the Isar and the Rhodanus.

6. Towards the other parts (I mean the parts which slope towards Italy) of the aforesaid mountainous country dwell both the Taurini, a Ligurian tribe, and other Ligures; to these latter belongs what is called the land of Donnus<sup>1</sup> and Cottius.<sup>2</sup> And after these peoples and the Padus<sup>3</sup> come the Salassi; and above them, on the mountain-crests, the Ceutrones, Catoriges, Varagri, Nantuates, Lake Lemenna (through which the Rhodanus courses), and the source of the Rhodanus. And not far from these are also the sources of the Rhenus, and Mount Adula, whence flows not only, towards the north, the Rhenus, but also, in the opposite direction, the Addua, emptying into Lake Larius, which is near Comum. And beyond Comum, which is situated near the base of the Alps, lie, on the one side, with its slope towards the east, the land of the Rhaeti and the Vennonnes, and, on the other, the land of the Lepontii, Tridentini, Stoni, and several other small

tribes, brigandish and resourceless, which in former times held the upper hand in Italy; but as it is, some of the tribes have been wholly destroyed, while the others have been so completely subdued that the passes which lead through their territory over the mountain, though formerly few and hard to get through, are now numerous, and safe from harm on the part of the people, and easily passable—so far as human device can make them so. For in addition to his putting down the brigands Augustus Caesar built up the roads as much as he possibly could; for it was not everywhere possible to overcome nature by forcing a way through masses of rock and enormous beetling cliffs, which sometimes lay above the road and sometimes fell away beneath it, and consequently, if one made even a slight misstep out of the road, the peril was one from which there was no escape, since the fall reached to chasms abysmal. And at some places the road there is so narrow that it brings dizziness to all who travel it afoot—not only to men, but also to all beasts of burden that are unfamiliar with it; the native beasts, however, carry the burdens with sureness of foot. Accordingly, these places are beyond remedy; and so are the layers of ice that slide down from above—enormous layers, capable of intercepting a whole caravan or of thrusting them all together into the chasms that yawn below; for there are numerous layers resting one upon another, because there are congelations upon congelations of snow that have become ice-like, and the congelations that are on the surface are from time to time easily released from those beneath before they are completely dissolved in the rays of the sun.

7. Most of the country of the Salassi lies in a deep glen, the district being shut in by both mountains, whereas a certain part of their territory stretches up to the mountain-crests that lie above. Accordingly, the road for all who pass over the mountains from Italy runs through the aforesaid glen. Then the road forks; and one fork runs through what is called Poeninus<sup>1</sup> (a road which, for wagons, is impassable near the summits of the Alps), while the other runs more to the west, through the country of the Centrones. The country of the Salassi has gold mines also, which in former times, when the Salassi were powerful, they kept possession of, just as they were also masters of the passes. The Duris River was of the greatest aid to them in their mining—I mean in washing the gold; and therefore, in making the water branch off to numerous places, they used to empty the common bed completely. But although this was helpful to the Salassi in their hunt for the gold, it distressed the people who farmed the plains below them, because their country was deprived of irrigation; for, since its bed was on favourable ground higher up, the river could give the country water. And for this reason both tribes were continually at war with each other. But after the Romans got the mastery, the Salassi were thrown out of their gold-works and country too; however, since they still held possession of the mountains, they sold water to the publicans who had contracted to work the gold mines; but on account of the greediness of the publicans<sup>2</sup> the Salassi were always in disagree-

ment with them too. And in this way it resulted that those of the Romans who from time to time wished to lead armies and were sent to the regions in question were well provided with pretexts for war. Until quite recently, indeed, although at one time they were being warred upon by the Romans and at another were trying to bring to an end their war against the Romans, they were still powerful, and, in accordance with their custom of brigandage, inflicted much damage upon those who passed through their country over the mountains; at any rate, they exacted even from Decimus Brutus, on his flight from Mutina,<sup>1</sup> a toll of a drachma<sup>2</sup> per man; and when Messala was wintering near their country, he had to pay for wood, cash down, not only for his fire-wood but also for the elm-wood used for javelins and the wood used for gymnastic purposes.<sup>3</sup> And once these men robbed even Caesar of money and threw crags upon his legions under the pretext that they were making roads or bridging rivers. Later on, however, Augustus completely overthrew them, and sold all of them as booty, after carrying them to Eporedia,<sup>4</sup> a Roman colony; and although the Romans had colonised this city<sup>5</sup> because they wished it to be a garrison against the Salassi, the people there were able to offer only slight opposition until the tribe, as such, was wiped out. Now although the number of the other persons<sup>6</sup> captured proved to be thirty-six thousand and, of the fighting men, eight thousand, Terentius Varro, the general who overthrew them, sold all

of them under the spear.<sup>1</sup> And Caesar sent three thousand Romans and founded the city of Augusta<sup>2</sup> in the place where Varro had pitched his camp, and at the present time peace is kept by all the neighbouring country as far as the highest parts of the passes which lead over the mountain.

8. Next, in order, come those parts of the mountains that are towards the east, and those that bend round towards the south: the Rhaeti and the Vindelici occupy them, and their territories join those of the Elvetii and the Boii; for their territories overlook the plains of those peoples. Now the Rhaeti reach down as far as that part of Italy which is above Verona and Comum (moreover, the "Rhaetic" wine, which has the repute of not being inferior to the approved wines of the Italic regions, is made in the foot-hills of the Rhaetic Alps), and also extend as far as the districts through which the Rhene runs; the Lepontii, also, and Camuni, belong to this stock. But the Vindelici and Norici occupy the greater part of the outer side of the mountain, along with the Breuni and the Genauni, the two peoples last named being Illyrians.<sup>3</sup> All these peoples used to overrun, from time to time, the neighbouring parts, not only of Italy, but also of the country of the Elvetii, the Sequani, the Boii and the Germans. The Licattii, the Clautenatii, and the Vennonae proved to be the boldest warriors of all the Vindelici, as did the Rucantii and the Cotuantii of all the Rhaeti. The Estiones, also, belong to the Vindelici, and so do the Brigantii, and their cities, Brigantium and Cambodunum, and

also Damasia, the acropolis, as it were, of the Licatii. The stories of the severity of these brigands towards the Italiotes are to this effect: When they capture a village or city, they not only murder all males from youths up but they also go on and kill the male infants, and they do not stop there either, but also kill all the pregnant women who their seers say are pregnant with male children.

9. Directly after these people come the peoples that dwell near the recess of the Adriatic and the districts round about Aquileia, namely, the Carni as well as certain of the Norici; the Taurisci, also, belong to the Norici. But Tiberius and his brother Drusus stopped all of them from their riotous incursions by means of a single summer-campaign; so that now for thirty-three years they have been in a state of tranquillity and have been paying their tributes regularly. Now throughout the whole of the mountainous country of the Alps there are, indeed, not only hilly districts which admit of good farming, but also glens which have been well built up by settlers; the greater part, however, (and, in particular, in the neighbourhood of the mountain-crests, where, as we know, the brigands used to congregate) is wretched and unfruitful, both on account of the frosts and of the ruggedness of the soil. It was because of scarcity, therefore, of both food and other things that they sometimes would spare the people in the plains, in order that they might have people to supply their wants; and in exchange they would give resin, pitch, torch-pine, wax, honey, and cheese—for with these things they were well supplied. Above the Carni lies the

<sup>3</sup> For Ἀττησινός C. Müller conj. Ἄλπος, A. Jacob, οὐτός Ἄλπος; Meineke reads Ἰσάρας.

<sup>1</sup> By "the Apennine Mountain" (both here and a few lines below) Strabo cannot mean the Apennine Range. Whatever the mountain may be, it must lie above both the Carni and the Vindelici; and, except in a very loose sense, no one mountain can fulfil both conditions. To amend to "Poeninus" (the Pennine Alps; see 4. 6. 7), as do Casaubon, Corais, and others, does not help matters at all. In fact, the context seems to show that Strabo has in mind the Carnic (Julian) Alps. But both this and the names of rivers, as the MSS. stand, are almost hopelessly inconsistent.

<sup>2</sup> But the "Isarus" (Isar) empties into the Ister (Danube), not the Adria (Adriatic); and it is in no sense connected with the Atagis. It is altogether probable that Strabo wrote "Isarkas" (or "Isargas")—that is, the Latin "Isareus" (or "Isargus")—which is now the "Eisach."

<sup>3</sup> By "Atagis" (the Greek for the "Adige" of to-day) Strabo must refer to one or the other of the two source-

Apennine Mountain,<sup>1</sup> which has a lake that issues forth into the River Isaras,<sup>2</sup> which, after having received another river, the Atagis,<sup>3</sup> empties into the Adriatic. But there is also another river, called the Atesinus,<sup>4</sup> which flows into the Ister from the same lake. The Ister too, in fact, takes its beginning in these mountains, for they are split into many parts and have many peaks; that is, from Liguria up to this point, the lofty parts of the Alps run in an unbroken stretch and present the appearance of one mountain, and then break up and diminish in height, and in turn rise again, into more and more parts, and more and more crests. Now the first of these is that ridge, on the far side of the Rhenus and the lake,<sup>5</sup> which

riders—the Etsch (or Adige) and Eisach—which meet at Botzen, and from there on constitute what is also called the Etsch (or Adige), the Eisach losing its identity. But if Strabo wrote "Isarkas" (Eisach) instead of "Isaras," he made the other source-river its tributary; hence, since it is the "Atagis," and not the Eisach, that traverses the lake (or rather, to-day, three lakes—Reschen See, Mitter See, and Heider See), we may assume that the copyists have exchanged the positions of "Isarkas" and "Atagis" in the Greek text (Groskurd and others read accordingly), or else, what is more likely, Strabo himself confused the two, just as he confused the Durias Major and Durias Minor in 4. 6. 6 (see also footnote).

<sup>4</sup> The "Atesinus" certainly cannot be identified with the "Ateia" (Hülken so identifies it, *Pauly-Wissowa*, p. 1924) if it empties into the Ister. According to C. Müller (whom A. Jacob follows, *Revue de Philologie* 36, p. 167), the "Atesinus" is the "Aenus" (the Inn); in this case, says Jacob, the "Stille Bach," which has its source very near the lakes traversed by the Etsch, was formerly taken for the source-stream of the Inn.

<sup>5</sup> This ridge is that which traverses Suabia from south to north, east of, and parallel to, the Rhine; "the lake" appears to be Lake Constance.

leans towards the east—a ridge only moderately high, in which, near the Suevi and the Hercynian Forest,<sup>1</sup> are the sources of the Ister. And there are other ridges which bend round towards Illyria and the Adriatic, among which are the Apennine Mountain above-mentioned and also the Tullum and Phligadia, the mountains which lie above the Vindelici, whence flow the Duras and Clanis and several other torrential rivers which join the stream of the Ister.

10. And further, the Iapodes<sup>2</sup> (we now come to this mixed tribe of Illyrii and Celti<sup>3</sup>) dwell round about these regions; and Mount Oera<sup>4</sup> is near these people. The Iapodes, then, although formerly they were well supplied with strong men and held as their homeland both sides of the mountain<sup>5</sup> and by their business of piracy held sway over these regions, have been vanquished and completely outdone by Augustus Caesar. Their cities are: Metulum, Arupini, Monetium, and Vendo. After the Iapodes comes Segestica, a city in the plain, past which flows the River Satis,<sup>6</sup> which empties into the Ister. The situation of the city is naturally well-suited for making war against the Daci. The Oera is the lowest part of the Alps in that region in which the Alps join the country of the Carni, and through which the merchandise from Aquileia is conveyed in wagons to what is called Nauportus (over a road

of not much more than four hundred stadia); from here, however, it is carried down by the rivers as far as the Ister and the districts in that part of the country; for there is, in fact, a river<sup>1</sup> which flows past Nauportus; it runs out of Illyria, is navigable, and empties into the Sais, so that the merchandise is easily carried down to Segestica and the country of the Pannonii and Taurisci.<sup>2</sup> And the Colapis<sup>3</sup> too joins the Sais near the city;<sup>4</sup> both are navigable and flow from the Alps. The Alps have both cattle and wild horses. Polybius says that there is also produced in the Alps an animal of special form; it is like a deer in shape, except for its neck and growth of hair (in these respects, he says, it resembles a boar), and beneath its chin it has a sac about a span long with hair at the tip, the thickness of a colt's tail.<sup>5</sup>

And it was on this account, also, that Agrippa began at Lugdunum when he cut his roads—that which passes through

<sup>1</sup> The Lake of Geneva, which is traversed by the Rhone.

<sup>2</sup> Strabo's brevity is again confusing. He suddenly shifts his standpoint from Lugdunum to the Poeninus. He has in mind two roads: (1) The road which ran through the Poeninus to the Rhodanus (at the eastern end of Lake Geneva), crossed the river, circled round the lake, crossed again at the other end, and then followed the Rhodanus to Lugdunum; and (2) a road that branched off from the same

the Cœmnenus Mountains as far as the Santoni and Aquitania, and that which leads to the Rhenus, and, a third, that which leads to the ocean (the one that runs by the Bellovaci and the Ambiani); and, a fourth, that which leads to Narbonitis and the Massilian seaboard. And there is also, again, in the Poeninus itself (if you leave on your left Lugdunum and the country that lies above it), a bye-road which, after you cross the Rhodanus or Lake Lemenna,<sup>1</sup> leads into the plains of the Helvetii;<sup>2</sup> and thence there is a pass through the Jura Mountain over to the country of the Sequani and also to that of the Lingones; moreover, the thoroughfares through these countries branch off both ways—both towards the Rhenus and towards the ocean.

12. Polybius further says that in his own time there was found, about opposite Aquileia in the country of the Noric Taurisci,<sup>3</sup> a gold mine so well-suited for mining that, if one scraped away the surface-soil for a depth of only two feet, he found forthwith dug-gold,<sup>4</sup> and that the diggings were never deeper than fifteen feet; and he goes on to say that part of the gold is immediately pure, in sizes of a bean or a lupine, when only the eighth part is boiled away, and that although the rest needs more smelting, the smelting is very profitable; and that two months after the Italiotes joined them in working the mine, the price of gold suddenly

at some point north of the lake into the plains of the Helvetii.

<sup>1</sup> Cp. § 9 above.

<sup>2</sup> Strabo here, as elsewhere (e.g. 3. 2. 8-10), carefully distinguishes between (1) metals that have to be dug up from beneath the surface soil, (2) those in the surface-soil itself, and (3) those washed down by the rivers.

<sup>5</sup> Polybius (3. 58) does not say where Hannibal crossed the Alps, although he says that Hannibal, after crossing the Alps, "entered the valley of the Padus and the territory of the Insubres." Both the ancient writers and modern scholars differ as to where Hannibal crossed. The reader is referred

became a third less throughout the whole of Italy, but when the Taurisci learned this they cast out their fellow-workers and carried on a monopoly. Now, however, all<sup>1</sup> the gold mines are under the control of the Romans. And here, too, just as in Iberia,<sup>2</sup> in addition to the dug-gold, gold-dust is brought down by the rivers—not, however, in such quantities as there. The same man, in telling about the size and the height of the Alps, contrasts with them the greatest mountains among the Greeks: Taygetus, Lycæus, Parnassus, Olympus, Pelion, Ossa; and in Thrace: Haemus, Rhodope, Dunax; and he says it is possible for people who are unencumbered to ascend any one of these mountains on the same day almost, and also to go around any one of them on the same day, whereas one cannot ascend the Alps even in five days; and their length is two thousand two hundred stadia,<sup>3</sup> that is, their length at the side, along the plains.<sup>4</sup> But he only names four passes over the mountains: the pass through the Ligures (the one that is nearest the Tyrrhenian Sea), then that through the Taurini, which Hannibal crossed,<sup>5</sup> then that through the Sulassi, and the fourth, that through the Rhaeti,—all of them precipitous passes. And as for lakes, he says that there are several in the mountains, but that only three are large: one of these, Lake Benacus,<sup>6</sup> has a length of five hundred stadia and a breadth of thirty,<sup>7</sup> from which flows the Mincius<sup>8</sup> River; the next, Lake

<sup>3</sup> Polybius, if correctly quoted, has made the mistake of exchanging the positions of "Larius" and "Verbanus." Certainly Strabo himself knew that it was from Larius (Lago di Como) that the Addua (Adda) flowed (4. 3. 3, 4. 6. 6, and 5. 1. 6), and he also knew the course of the Ticinus (5. 1. 11). Yet Strabo himself (4. 3. 3) blundered greatly in making the Addua flow from Mt. Adula.

### I

1. AFTER the foothills of the Alps comes the beginning of what is now Italy. For the ancients used to call only Oenotria Italy, although it extended from the Strait of Sicily only as far as the Gulfs of Tarentum and Poscidonia,<sup>1</sup> but the name of Italy prevailed and advanced even as far as the foothills of the Alps, and also took in, not only those parts of Ligustica<sup>2</sup> which extend from the boundaries of Tyrrhenia as far as the Varus River and the sea there, but also those parts of Istria which extend as far as Pola. One might guess that it was because of their prosperity that the people who were the first to be named Italians imparted the name to the neighbouring peoples, and then received further increments in this way until the time of the Roman conquest. At some late time or other after the Romans had shared with the Italiotes the equality of civic rights, they decided to allow the same honour both to the Cisalpine Galatae<sup>3</sup> and to the Heneti,<sup>4</sup> and to call all of them Italiotes as well as Romans, and, further, to send forth many colonies amongst them, some earlier and some later, than which it is not easy to call any other set of colonies better.

times "Heneti" (e. g. here and in 3. 2. 18), sometimes "Eneti" (e. g. in 1. 3. 2 and 1. 3. 21).

2. Now it is not easy geometrically to outline what is now Italy, as a whole, by means of a single figure, and yet they<sup>1</sup> say it is a triangular promontory extending towards the south and the winter-risings of the sun, with its vertex at the Strait of Sicily, and with the Alps as its base. I must concede also<sup>2</sup> one of the sides, namely, that which ends at the strait and is washed by the Tyrrhenian Sea. But "triangle" is the specific name for the rectilinear figure, whereas in this case both the base and the side are curved, so that, if I say "I must concede," I must put down both the base and the side as belonging to a curved-line figure, and I must concede also the slant of this side, namely, the slant towards the risings.<sup>3</sup> But as for the rest of the description given by these writers, it is inadequate, because they have assumed only a single side extending from the recess of the Adriatic to the strait; for by "side" we mean the line that has no angle, and a line has no angle when its parts either do not converge towards one another or else not much. But the line from Ariminum<sup>4</sup> to the Iapygian Cape<sup>5</sup> and that from the strait to the same cape converge very much. And the same holds true, I think, with the line from the recess of the Adriatic and that from Iapygia; for, meeting in the regions round about Ariminum and Ravenna, they form an angle, or, if not an angle, at least a considerable curve. Hence this stretch might perhaps be one side

<sup>1</sup> Among others, Polybius (2. 14), whose account should be read in this connection.

<sup>2</sup> That is, in addition to the base.

<sup>3</sup> The winter-risings, of course, as previously said.

<sup>4</sup> Now Rimini.

<sup>5</sup> Now Capo di Leuca.

(I mean the coasting-voyage from the recess to Iapygia), though the side would not be straight; and the rest of the stretch, thence to the strait, might suggest another side, though this side would not be straight, either. In this sense one might call the figure "four-sided" rather than "three-sided," but in no sense whatever a "triangle," except by an abuse of the term. It is better, however, to confess that the representation of non-geometrical figures is not easy to describe.

3. Taking the parts severally, however, we can speak as follows: as for the Alps, their base is curved and gulf-like, with the cavities turned towards Italy; the central parts of the gulf are near the Salassi, while the extremities take a turn, the one as far as Oera<sup>1</sup> and the recess of the Adriatic, the other to the Ligurian seaboard as far as Genua (the emporium of the Ligures), where the Apennine Mountains join the Alps. But immediately at the base of the Alps there lies a considerable plain, with its length and its breadth about equal, namely, two thousand one hundred stadia; its southern side is shut in both by the seaboard of the Heneti and by those Apennine Mountains which reach down to the neighbourhood of Ariminum and Ancona; for these mountains, after beginning in Liguria, enter Tyrrhenia, leaving only a narrow seaboard, and then, withdrawing into the interior little by little, when they come to be opposite the territory of Pisa, bend towards the east and towards the Adriatic until they reach the regions round about Ariminum and Ancona, there joining in a straight line the seaboard of the Heneti. <sup>1</sup> μετὰ, before τῶν ὀρῶν (from *man. sec.* in B and from *ko*) ; so the editors in general.

<sup>2</sup> For χιλίων, Kramer (from conj. of Casaubon) writes διςχιλίων ; so the later editors.

<sup>1</sup> Polybius (2. 14) frankly calls the part of Italy now discussed by Strabo a "triangle," giving these dimensions: "The northern side, formed by the Alps, 2200 stadia; the southern, formed by the Apennines, 3500; the base, the seaboard of the Adriatic, from Sena to the recess of the gulf, more than 2500." Strabo, on the other hand, refuses thus

accordingly, is shut in by these boundaries; and although the length of the seaboard, together with that of the mountains, is as much as six thousand three hundred stadia,<sup>1</sup> the breadth is slightly less than one thousand.<sup>2</sup> The remainder of Italy, however, is narrow and elongated, terminating in two heads, one at the Sicilian Strait and the other at Iapygia; and it is pinched in on both sides, on one by the Adriatic and on the other by the Tyrrhenian Sea. The shape and the size of the Adriatic are like that part of Italy which is marked off by the Apennine Mountains and by both seas as far as Iapygia and that isthmus which is between the Gulfs of Tarentum and Posidonia; for the maximum breadth of each is about one thousand three hundred stadia, and the length not much less than six thousand.<sup>3</sup> The remainder of Italy, however, is all the country occupied by the Brettii and certain of the Leucani. Polybius<sup>4</sup> says that, if you go by foot, the seaboard from Iapygia to the strait is as much as three thousand stadia, and that it is washed by the Sicilian Sea, but that, if you go by sea, it is as much as five hundred stadia short of that. The Apennine Mountains, after joining the regions round about Ariminum and Ancona, that is, after marking to misuse the word "triangle," for he conceives of what he has previously called "the southern side" as curved and otherwise irregular.

<sup>1</sup> The editors have emended "one thousand" to "two thousand," in order to make the figures consistent with "two thousand one hundred" above. But Strabo is now thinking, apparently, of the breadth across the *southern* side (not the *northern* side at the base of the Alps); that is, the breadth of *Celtica Cispadana*, for which the one thousand is a very close estimate.

off the breadth of Italy there from sea to sea, again take a turn, and cut the whole country lengthwise. As far, then, as the territory of the Peucetii and that of the Leucani they do not recede much from the Adriatic, but after joining the territory of the Leucani they bend off more towards the other sea and then, for the rest of the way, passing throughout the centre of the territory of the Leucani and Brettii, end at what is called Leucopetra<sup>1</sup> in the district of Rhegium. Thus much, then, I have said about what is now Italy, as a whole, in a merely rough-outline way, but I shall now go back and try to tell about the several parts in detail; and first about the parts at the base of the Alps.

4. This country is a plain that is very rich in soil and diversified by fruitful hills. The plain is divided almost at its very centre by the Padus; and its parts are called, the one Cispadana, the other Transpadana.<sup>2</sup> Cispadana is all the part that lies next to the Apennine Mountains and Liguria, while Transpadana is the rest. The latter is inhabited by the Ligurian and the Celtic tribes, who live partly in the mountains, partly in the plains, whereas the former is inhabited by the Cæli and Heneti. Now these Celts are indeed of the same race as the Transalpine Celts, but concerning the Heneti there are two different accounts: Some say that the Heneti too are colonists of those Celts of like name<sup>3</sup> who live on the ocean-coast; while others say that certain of the Heneti of Paphlagonia<sup>4</sup> escaped hither with Antenor from the Trojan war, and, as testimony

to this, adduce their devotion to the breeding of horses—a devotion which now, indeed, has wholly disappeared, although formerly it was prized among them, from the fact of their ancient rivalry in the matter of producing mares for mule-breeding. Homer, too, recalls this fact: "From the land of the Heneti, whence the breed of the wild mules." Again, Dionysius,<sup>1</sup> the tyrant of Sicily, collected his stud of prize-horses from here, and consequently not only did the fame of the Henetian foal-breeding reach the Greeks but the breed itself was held in high esteem by them for a long time.

5. Now this whole country is filled with rivers and marshes, but particularly the part that belongs to the Heneti. And this part, furthermore, is also affected by the behaviour of the sea; for here are almost the only parts of Our Sea that behave like the ocean, and both the ebb-tides and the flood-tides produced here are similar to those of the ocean, since by them the greater part of the plain is made full of lagoons. But, like what is called Lower Egypt, it has been intersected by channels and dikes; and while some parts have been relieved by drainage and are being tilled, others afford voyages across their waters. Of the cities here, some are wholly island, while others are only partly surrounded by water. As for all the cities that are situated above the marshes in the interior, the inland voyages afforded thereto by the rivers are wonderful, but particularly by the Padus; for not only is it the largest of these rivers but it is oftentimes filled by both the rains and the snow, although, as the result of

separating into many streams near the outlets, the mouth is choked with mud and hard to enter. But even the greatest difficulties are overcome by experience.

6. In early times, then, as I was saying,<sup>1</sup> the country round about the Padus was inhabited for the most part by the Celti. And the largest tribes of the Celti were the Boii, the Insubri, and those Senones who, along with the Gatzatae, once seized the territory of the Romans at the first assault. These two peoples, it is true, were utterly destroyed by the Romans later on, but the Boii were merely driven out of the regions they occupied; and after migrating to the regions round about the Ister, lived with the Taurisci, and carried on war against the Daci until they perished, tribe and all—and thus they left their country, which was a part of Illyria, to their neighbours as a pasture-ground for sheep. The Insubri, however, are still in existence. They had as metropolis Mediolanium, which, though long ago only a village (for they all used to dwell only in villages), is now a notable city; it is across the Padus, and almost adjoins the Alps. Near by<sup>2</sup> is Verona also (this, too, a large city), and, smaller than these two, the cities of Brixia, Mantua, Regium,<sup>3</sup> and Comum. Comum used to be only a moderate-sized settlement, but, after its ill treatment by the Rhæti who are situated above it, Pompey Strabo, father of Pompey the Great, settled a Roman colony there; then Gaius Scipio added three thousand colonists; then the Deified Caesar further settled it with five

<sup>1</sup> Strabo seems to mean the last census (14 A.D.) in the reign of Augustus. The number of citizens at this census, according to the *Monumentum Ancyranum*, was 4,037,000.

thousand, among whom the five hundred Greeks were the most notable; and to these latter he not only gave the rights of citizenship but also enrolled them among the colonists. The Greeks did not, however, take up their abode there, though they at least left to the settlement the name; for the colonists were, as a whole, called "Neo-Comitae" — that is, if interpreted in Latin, "Novum Comum." Near this place is what is called Lake Larius; it is fed by the River Addua. The river then issues forth from the lake into the Padus; it has its original sources, however, in Mount Adula, in which also the Rhenus has its sources.

7. These cities, then, are situated considerably above the marshes; and near them is Patavium, the best of all the cities in that part of the country, since this city by recent census,<sup>1</sup> so it is said, had five hundred knights, and, besides, in ancient times used to send forth an army of one hundred and twenty thousand. And the quantities of manufactured goods which Patavium sends to Rome to market—clothing of all sorts and many other things—show what a goodly store of men it has and how skilled they are in the arts. Patavium offers an inland voyage from the sea by a river which runs through the marshes, two hundred and fifty stadia from a large harbour; the harbour, like the river, is called Medoacus. The largest city in the marshes, however, is Ravenna, a city built entirely of wood<sup>2</sup> and coursed by rivers, and it is provided with thoroughfares by means of bridges and ferries. At the tides the city receives no small portion of the sea, so that, since

<sup>1</sup> Possibly Strabo means simply "built on piles"; but see *Encyc. Brit.* (1911) under "Ravenna," p. 926.

the filth is all washed out by these as well as by the rivers, the city is relieved of foul air. At any rate, the place has been found to be so healthful that the rulers have given orders to feed and train the gladiators there. Now this is indeed one of the marvellous things at Ravenna, I mean the fact that the air in a marsh is harmless (compare the Egyptian Alexandria, where, in summer, the lake<sup>1</sup> loses its baneful qualities by reason of the overflow of the Nile and the disappearance of the standing waters), but the behaviour of the vine is also a thing fit to marvel at; for although the marshes support it and make it yield fruit quickly and in great quantities, it dies within four or five years. Altinum too is in a marsh, for the position it occupies is similar to that of Ravenna. Between the two cities is Butrium, a town belonging to Ravenna, and also Spina, which though now only a small village, long ago was a Greek city of repute. At any rate, a treasury<sup>2</sup> of the Spinitac is to be seen at Delphi; and everything else that history tells about them shows that they were once masters of the sea. Moreover, it is said that Spina was once situated by the sea, although at the present time the place is in the interior, about ninety stadia distant from the sea. Furthermore, it has been said that Ravenna was founded by the Thessalians; but since they could not bear the wanton outrages of the Tyrrhenians, they voluntarily took in some of the Ombrii,<sup>3</sup> which latter still now hold the city, whereas the Thessalians themselves returned home.

<sup>1</sup> The Greek word for "Adriatic" is merely "Adrias."

<sup>2</sup> So Pliny (3. 20).

<sup>3</sup> Pliny (3. 22) placed Aquileia fifteen miles from the sea. The distance to-day to the ruins of the old Aquileia is seven miles. The Natiso (Natisone) appears to have changed its lower course since Strabo's time.

## GEOGRAPHY, 5. 1. 7-8

These cities, then, are for the most part surrounded by the marshes, and hence subject to inundations.

8. But Optergium, Concordia, Atria, Vicetia, and other small towns like them are less hemmed in by the marshes, though they are connected with the sea by small waterways. It is said that Atria was once an illustrious city, and that the Adriatic<sup>1</sup> Gulf got its name therefrom, with only a slight change in the spelling.<sup>2</sup> Aquileia, which is nearest of all to the recess of the Gulf, was founded by the Romans as a fortress against the barbarians who were situated above it; and there is an inland voyage thither for merchant-vessels, by way of the River Natiso, for a distance of more than sixty stadia.<sup>3</sup> Aquileia has been given over as an emporium for those tribes of the Illyrians that live near the Ister;<sup>4</sup> the latter load on wagons and carry inland the products of the sea, and wine stored in wooden jars,<sup>5</sup> and also olive-oil, whereas the former<sup>6</sup> get in exchange slaves, cattle, and hides. But Aquileia is outside the boundaries of the Heneti. The boundary between the two peoples is marked by a river flowing from the Alps,<sup>7</sup> which affords an inland voyage of as much as twelve hundred stadia to the city of Noreia,<sup>8</sup> near

<sup>1</sup> Cp. 4. 6. 10 and 7. 8. 2.

<sup>2</sup> In 5. 1. 12 Strabo speaks of wooden jars "larger than houses."

<sup>3</sup> By "the former," Strabo refers of course to the inhabitants, not only of Aquileia, but of the various towns (named and unnamed above) about the recess of the Adriatic.

<sup>4</sup> It is impossible to say what river Strabo had in mind, whether the Isonzo, or the Tagliamento, or the Sile, or the Piave, or what; but no river of to-day answers the conditions.

<sup>5</sup> Now Neumarkt, in the duchy of Styria, Austria.

which Gnaeus Carbo clashed to no effect with the Cimbri.<sup>1</sup> This region has places that are naturally well-suited to gold-washing, and has also iron-works. And in the very recess of the Adriatic<sup>2</sup> there is also a temple of Diomedes that is worth recording, "the Timavum"; for it has a harbour, and a magnificent precinct, and seven fountains of potable waters which immediately empty into the sea in one broad, deep river.<sup>3</sup> According to Polybius, all the fountains except one are of salt water, and, what is more, the natives call the place the source and mother of the sea. But Poseidonius says that a river, the Timavus, runs out of the mountains, falls down into a chasm, and then, after running underground about a hundred and thirty stadia, makes its exit near the sea.

9. As for the dominion of Diomedes in the neighbourhood of this sea, not only the "Islands of Diomedes" bear witness thereto, but also the historical accounts of the Daunii and Argos Hippium,<sup>4</sup> which I shall relate<sup>5</sup> insofar as they may be historically useful; but I must disregard most of the mythical or false stories, as, for example, the stories of Phaethon, and of the Heliades that were changed into poplar-trees near the Eridanus (the Eridanus that exists nowhere on earth, although it is spoken of as near the Padus),<sup>6</sup> and of the Electrises Islands that lie off the Padus,<sup>7</sup> and of the guinea-fowls on

<sup>1</sup> Cp. the reference to the Attic Eridanus in 9. 1. 19.

<sup>2</sup> In Hesiod (*Fr.* 199 [220], *Rzach*) Eridanus is the river-god on the banks of whose river were quantities of amber ("Electrum"). Later on, since amber was found at the mouth of the Po, the "Amber (Electrides) Islands" were placed there (see Pliny 3. 30). In Greek mythology Phaethon was thrown from the chariot of the Sun into Eridanus, and his sisters (the Heliades) who had yoked the chariot were metamorphosed into poplars, and their tears into amber.

them; for not one of these things is in that region, either. It is an historical fact, however, that among the Heneti certain honours have been decreed to Diomedes; and, indeed, a white horse is still sacrificed to him, and two precincts are still to be seen—one of them sacred to the Argive Hera and the other to the Aetolian Artemis. But some mythical elements, of course, have been added:<sup>1</sup> namely, that in these sacred precincts the wild animals become tame, and deer herd with wolves, and they allow the people to approach and caress them, and any that are being pursued by dogs are no longer pursued when they have taken refuge here. And it is said that one of the prominent men, who was known for his fondness for giving bail for people and was twitted for this, fell in with some hunters who had a wolf in their nets, and, upon their saying in jest that if he would give bail for the wolf, and agree to settle all the damage the wolf should do, they would set the wolf free from the toils, he agreed to the proposal; and the wolf, when set free, drove off a considerable herd of unbranded horses and brought them to the standing of the man who was fond of giving bail; and the man who received the favour not only branded all the mares with a wolf, but also called them the “wolf-breed”—mares exceptional for speed rather than beauty; and his successors kept not only the brand but also the name for the breed of the horses, and made it a custom not to sell a mare to outsiders, in order that the genuine breed might remain in their family alone, since horses of that breed had become famous. But, at the present time, as I was saying,<sup>2</sup> the practice of horse-breeding has wholly disappeared.

After the Timavum comes the seaboard of the Istrii as far as Pola, which belongs to Italy. Between the Timavum and Pola lies the stronghold of Tergeste, at a distance of one hundred and eighty stadia from Aquileia. As for Pola, it is situated in a harbour-like gulf which has isles with good mooring-places and with fruitful soil; it was founded in early times by those Colchians who were sent forth in quest of Medea, but failed in their undertaking and thus condemned themselves to exile: "which a Greek would call 'the city of the exiles,'" as Callimachus has said, "but their tongue hath named it Polae."<sup>1</sup> The Transpadane districts, then, are occupied both by the Heneti and by the peoples who extend as far as Pola; and, above the Heneti, by the Carni, the Cenomani, the Medoaci, and the Symbri;<sup>2</sup> of these peoples, some were once enemies of the Romans, but the Cenomani and the Heneti used to help the Romans in their battles, not only before the campaign of Hannibal (I mean when the Romans were making war upon the Boii and the Symbri), but thereafter as well.

10. But the Cispadane peoples occupy all that country which is encircled by the Apennine Mountains towards the Alps as far as Genoa and Sabata.<sup>3</sup> The greater part of the country used to be occupied by the Boii, Ligures, Senones, and Gatzatae; but since the Boii have been driven out, and since both

the Gatzatae and the Senones have been annihilated,<sup>1</sup> only the Ligurian tribes and the Roman colonies are left. The Romans, however, have been intermingled with the stock of the Ombrici and also, in some places, with that of the Tyrrheni;<sup>2</sup> for both these tribes, before the general aggrandizement of the Romans, carried on a sort of competition with one another for the primacy, and since they had only the River Tiber between them could easily cross over against one another. And if, as I suppose, one of the two peoples went forth on a campaign against a third people, the other of the two conceived a contentious desire not to fail to make an expedition to the same places; and so, too, when the Tyrrheni had sent forth an army into the midst of the barbarians round about the Padus and had fared well, and then on account of their luxurious living were quickly cast out again, the other of the two made an expedition against those who had cast them out; and then, in turns, disputing over the places, the two, in the case of many of the settlements, made some Tyrrhenian and some Ombrican—the greater number, however, Ombrican, for the Ombrici were nearer. But the Romans, upon taking control and sending settlers to many places, helped to preserve also the stocks of the earlier settlers. And at the present time, although they are all Romans, they are none the less called, some "Ombri," and some "Tyrrheni," as is the case with the Heneti, the Ligures, and the Insubri.

And Ariminum has a harbour and a river of like name.<sup>4</sup> From Placentia to Ariminum the distance is one thousand three hundred stadia. Beyond Placentia, towards the boundaries of the land of Cottius, there lies, within a distance of thirty-six miles from Placentia, the city of Ticinum (and also the river of like name<sup>5</sup> that flows past it and joins the Padus), and also, on a road which runs slightly to one side, there lie Clastidium, Derton<sup>6</sup> and Aquae Statiellae. But the direct road to Ocelum<sup>7</sup> runs along the Padus and the River Durias, the greater part of it over ravines, since, besides these two, it has several other rivers to cross, among which is the

<sup>1</sup> The Greek of this last clause is too concise to be accurate and clear, but the order of the words indicates that Strabo's thought was correct. He thinks of the traveller as first reaching Faventia (which is some twenty miles from the Sapis); then Caesena, which is near (on) the Sapis; then the Rubicon (which is not near Caesena, but some twenty miles away), which alone borders on the territory of Ariminum.

<sup>3</sup> It is hard to believe that Strabo wrote "Druentia" here, for he has already properly placed the source of the Druentia beyond Oculum (see 4. 6. 5 and the footnote). It is not unlikely that he wrote "Durias" (i. e. Durias Major) instead, for the road in question not only crossed the Durias Minor, which it followed, but the Durias Major as well. Otherwise, he is characterizing the road beyond Oculum when he is supposed to be discussing merely the stretch from Ticinum to Oculum.

## GEOGRAPHY, §. I. II

Druentia,<sup>1</sup> a distance of about sixty miles.<sup>2</sup> And this<sup>3</sup> is where the Alps Mountains and Celtica<sup>4</sup> begin.

Near those mountains which lie above Luna is a city, Luca, although some of the people here live only in villages; nevertheless the country has a goodly store of men, and the greater part of the soldiery comes from here, and also the majority of those men of equestrian rank from whom the Senate recruits its ranks.<sup>5</sup> Derton is a considerable city, and it is situated about midway of the road which runs from Genua to Placentia, being four hundred stadia distant from each; and this is the road on which Aquæ Statiellæ is situated. Of the distance from Placentia to Ariminum I have already spoken; there is also a voyage thence by the Padus down to Ravenna which takes two days and nights. Now a considerable part of Cispadana too used to be covered by marshes (through which Hannibal, on his advance against Tyrrhenia, passed only with difficulty); but Scaurus<sup>6</sup> drained the plains by running navigable canals from the Padus as far as Parma; for near Placentia the Padus is joined by the Trebia, as also before that by several other rivers, and is thus made excessively full. This Scaurus is the man who constructed the Aemilian

<sup>1</sup> Roman miles, of course. But the distance from Ticinum to Ocelum is about a hundred miles. Sixty miles is a close estimate for the distance from Ticinum to the Duria Major. Most of the editors, including Meincke, amend to "one hundred and sixty."

Way which runs through Pisa and Luna as far as Sabata and thence through Derton; there is another Aemilian Way, however—I mean the one which succeeds the Flaminian. For Marcus Lepidus and Gaius Flaminius were consuls together<sup>1</sup>; and, upon subjugating the Ligures, the latter constructed the Flaminian Way<sup>2</sup> from Rome through Tyrrhenia and Ombricia as far as the regions of Ariminum, and the former the succeeding road that runs as far as Bononia, and from there, along the base of the Alps, thus encircling the marshes, to Aquileia. Now the boundary of all this country which we call Cisalpine Celtica—I mean the boundary between it and the remainder of Italy—was once designated by that part of the Apennine Mountains which is beyond Tyrrhenia, and also by the River Aesis, but later on by the Rubicon; both these rivers empty into the Adriatic.

12. As for the excellence of the regions, it is evidenced by their goodly store of men, the size of the cities and their wealth, in all which respects the Romans in that part of the world have surpassed the rest of Italy. For not only does the tilled land bring forth fruits in large quantities and of all sorts, but the forests have acorns in such quantities that Rome is fed mainly on the herds of swine that come from there. And the yield of millet is also exceptional, since the soil is well-watered; and millet is the greatest preventive of famine, since it withstands every unfavourable weather, and can never fail, even though there be

<sup>1</sup> But from other accounts this Aemilian Way was built by Gaius Flaminius the Elder in 220 B.C. (see Pauly-Wissowa, under "Flaminia Via," p. 2493, and "Flaminia," p. 2502).

scarcity of every other grain. The country has wonderful pitch-works, also; and as for the wine, the quantity is indicated by the jars, for the wooden ones are larger than houses; and the good supply of the pitch helps much towards the excellent smearing the jars receive. As for wool, the soft kind is produced by the regions round Mutina and the River Scultenna (the finest wool of all); the coarse, by Liguria and the country of the Symbri, from which the greater part of the households of the Italiotes are clothed; and the medium, by the regions round Patavium, from which are made the expensive carpets and covers and everything of this kind that is woolly either on both sides or only on one. But as for the mines, at the present time they are not being worked here as seriously as before—perhaps on account of the fact that those in the country of the Transalpine Celti and in Iberia are more profitable<sup>1</sup>; formerly, however, they were seriously worked, for there was a gold mine at Vercelli too; Vercelli is a village near Ictumuli (this too a village), and both are near Placentia. So much, then, for my geographical description of the First Portion of Italy.

description except that the people live only in villages, plowing and digging rough land, or rather, as Poseidonius says, quarrying stones. The Third Portion is contiguous to the Second—I mean the country of the Tyrrheni, who hold the plains that extend as far as the River Tiber and whose country is washed, on its eastern side (generally speaking), by the river as far as its mouth, and on the other side by the Tyrrhenian and Sardinian Sea. But the Tiber flows from the Apennine Mountains, and is fed by many rivers; for a part of its course it runs through Tyrrhenia itself, and in its course thereafter separates from Tyrrhenia, first, Ombrica,<sup>1</sup> then, the country of the Sabini and also that part of Latium which is near Rome and extends as far as the coastline. These three latter lie approximately parallel to the river and Tyrrhenia in their breadth and also to one another in their length; and they reach up to those parts of the Apennine Mountains which closely approach the Adriatic, in this order: first, Ombrica, then, after Ombrica, the country of the Sabini, and, last, Latium,—all of them beginning at the river. Now the country of the Latini lies between the coastline that stretches from Ostia as far as the city of Sinuessa and the country of the Sabini (Ostia is the port-town of the Roman navy—the port into which the Tiber, after flowing past Rome, empties), although it extends lengthwise as far as Campania and the mountains of the Samnitae. But the country of the Sabini lies between that of the Latini and that of the Ombrici, although it too extends to the mountains of the Samnitae, or rather it joins that part of the Apennines which is in the country of the Vestini, the Peligni, and the

And Tyrrhenia, beginning at its proper sea<sup>2</sup> and the Tiber, ceases at the very foot of those mountains which enclose it from Liguria to the Adriatic. I shall treat the several parts, however, in detail, beginning with the Tyrrheni themselves.

2. The Tyrrheni, then, are called among the Romans "Etrusci" and "Tusci." The Greeks, however, so the story goes, named them thus after Tyrrhenus, the son of Atys, who sent forth colonists hither from Lydia: At a time of famine and dearth of crops, Atys, one of the descendants of Heracles and Omphale, having only two children, by a casting of lots detained one of them, Lydus, and, assembling the greater part of the people with the other, Tyrrhenus, sent them forth. And when Tyrrhenus came, he not only called the country Tyrrhenia after himself, but also put Tarco in charge as "coloniser," and founded twelve cities; Tarco, I say, after whom the city of Tarquinia<sup>3</sup> is named, who, on account of his sagacity from boyhood, is said by the myth-tellers to have been born with grey hair. Now at first the Tyrrheni, since they were subject to the orders of only one ruler, were very strong, but in later times, it is reasonable to suppose, their united government was dissolved, and the Tyrrheni, yielding to the violence of their neighbours, were broken up into separate cities; for otherwise they would not have given up a happy land and taken to the sea as pirates, different bands turning to different parts of the high seas; indeed, in all cases where they acted in concert, they were able,

<sup>1</sup> Demaratus became the ruler of the city (8. 6. 20).

not only to defend themselves against those who attacked them, but also to attack in turn and to make long expeditions. But it was after the founding of Rome that Demaratus arrived, bringing with him a host of people from Corinth; and, since he was received by the Tarquinians,<sup>1</sup> he married a native woman, by whom he begot Lucumo. And since Lucumo had proved a friend to Ancus Marcius, the king of the Romans, he was made king,<sup>2</sup> and his name was changed to Lucius Tarquinius Priscus. Be that as it may, he too adorned Tyrrhenia, as his father had done before him—the father by means of the goodly supply of artisans who had accompanied him from home and the son by means of the resources supplied by Rome. It is further said that the triumphal, and consular, adornment, and, in a word, that of all the rulers, was transferred to Rome from Tarquinius,<sup>3</sup> as also fasces, axes, trumpets, sacrificial rites, divination, and all music publicly used by the Romans. This Tarquinius was the father of the second Tarquinius, the "Superbus," who was the last of the kings and was banished.<sup>4</sup> Porsinas, the king of Clusium,<sup>5</sup> a Tyrrhenian city, undertook to restore him to the throne by force of arms, but was unable to do so, although he broke up the personal enmity against himself and departed as friend, along with honour and large gifts.

3. Thus much for the lustre of the Tyrrheni. And still to be recorded are the achievements of the Cueretani:<sup>6</sup> they defeated in war those Galatae who

had captured Rome,<sup>1</sup> having attacked them when they were in the country of the Sabini on their way back, and also took away as booty from the Galatae, against their will, what the Romans had willingly given them; in addition to this, they saved all who fled to them for refuge from Rome, and the immortal fire, and the priestesses of Vesta. The Romans, it is true, on account of the bad managers which the city had at the time, do not seem to have remembered the favour of the Caeretani with sufficient gratitude, for, although they gave them the right of citizenship, they did not enroll them among the citizens, and even used to relegate all others who had no share in the equal right<sup>2</sup> to "the Tablets of the Caeretani."<sup>3</sup> Among the Greeks, however, this city was in good repute both for bravery and for righteousness; for it not only abstained from all piracy, although particularly well fitted therefor, but also set up at Pytho<sup>4</sup> what is called "the treasury<sup>5</sup> of the Agyllaei"; for what is now Cieren<sup>6</sup> was formerly called Agylla, and is said to have been founded by Pelasgi who had come from Thessaly. But when those Lydians whose name was changed to Tyrrheni marched against the Agyllaei, one of them approached the wall and inquired what the name of the city was, and when one of the Thessalians on the wall, instead of replying to the inquiry, saluted him with a "Chaere,"<sup>7</sup> the Tyrrheni accepted the omen, and, on capturing the city, changed its name accordingly. But the city, once so splendid and illustrious, now preserves mere traces of its former self; and the hot springs near by, which are called Caeretanian

4. As for the Pelasgi, almost all agree, in the first place, that some ancient tribe of that name spread throughout the whole of Greece, and particularly among the Acolians of Thessaly. Again, Ephorus says that he is of the opinion that, since they were originally Arcadians, they chose a military life, and that, in converting many peoples to the same mode of life, they imparted their name to all, and thus acquired great glory, not only among the Greeks, but also among all other peoples whithersoever they had chanced<sup>3</sup> to come. For example, they prove to have been colonisers of Crete, as Homer says; at any rate, Odysseus says to Penelope: "But one tongue with others is mixed; there<sup>4</sup> dwell Achaeans, there Cretans of the old stock, proud of heart, there Cydonians, and Dorians too, of waving plumes, and goodly Pelasgians." And Thessaly is called "the Pelasgian Argos" (I mean that part of it which lies between the outlets of the Peneius River and Thermopylae as far as the mountainous country of Pindus), on account of the fact that the Pelasgi extended their rule over these regions. Further, the Dodonaean Zeus is by the poet himself named "Pelasgian": "O Lord Zeus, Dodonaean, Pelasgian." And many have called also the tribes of Epirus

<sup>1</sup> Hippothous was the son of "Lethus Pelasgus" (*Iliaid* 2. 843, and 17. 288). In 13. 3. 2 Strabo takes Homer, in the passage above quoted, to mean Larisa Phryconia, the "Larisa near Cyme," which latter is now Lamurtkeui. On "Larisa Phryconia," see 9. 5. 12.

"Pelasgian," because in their opinion the Pelasgi extended their rule even as far as that. And, further, because many of the heroes were called "Pelasgi" by name, the people of later times have, from those heroes, applied the name to many of the tribes; for example, they have called the island of Lesbos "Pelasgia," and Homer has called "Pelasgi" the people that were neighbours to those Cilicians who lived in the Troad: "And Hippothous led the tribes of spear-fighting Pelasgi, those Pelasgi who inhabited deep-soiled Larissa."<sup>1</sup> But Ephorus' authority for the statement that this race originated in Arcadia was Hesiod; for Hesiod says: "And sons were born of god-like Lyeon, who, on a time, was begotten by Pelasgus." Again, Aeschylus, in his *Suppliants*,<sup>2</sup> or else his *Danaan Women*,<sup>3</sup> says that the race of the Pelasgi originated in that Argos which is round about Mycenae.<sup>4</sup> And the Peloponnesus too, according to Ephorus, was called "Pelasgia."<sup>5</sup> And Euripides too, in his *Archelaus*,<sup>6</sup> says: "Danaus, the father of fifty daughters, on coming into Argos,<sup>7</sup> took up his abode in the city of Inachus,"<sup>8</sup> and

<sup>1</sup> *Hiketides* 16 ff. and 260 ff.

<sup>2</sup> The *Danaan Women* (*Danaiides*) is no longer extant.

<sup>4</sup> That is, the district of Argos, in which Mycenae as well as the city of Argos were situated (see 8. 6. 5-10).

<sup>5</sup> The Peloponnesus was called "Argos" as well as "Pelasgia" (8. 6. 5).

<sup>6</sup> The *Archelaus* is no longer extant.

<sup>7</sup> Again the district of Argos, elsewhere (8. 6. 8) called "Argolia."

<sup>8</sup> The "city of Inachus"—so called from Inachus, the first king of Argos—was the city of Argos. By a slight change in the Greek most of the editors (see note 4 on opposite page) amend "took up his abode in" to "founded," presumably on the ground that Strabo later says "Danaus founded the acropolis" (Argos) "of the Argives" (8. 6. 9).

throughout Greece he laid down a law that all people hitherto named Pelasgians were to be called Danaans." And again, Anticleides says that they were the first to settle the regions round about Lemnos and Imbros, and indeed that some of these sailed away to Italy with Tyrrhenus the son of Atys. And the compilers<sup>1</sup> of the histories of *The Land of Attica*<sup>2</sup> give accounts of the Pelasgi, believing that the Pelasgi were in fact at Athens too,<sup>3</sup> although the Pelasgi were by the Attic people called "Pelargi,"<sup>4</sup> the compilers add, because they were wanderers and, like birds, resorted to those places whither chance led them.<sup>5</sup>

5. They say that the maximum length of Tyrrhenia—the coastline from Luna as far as Ostia—is about two thousand five hundred stadia, and its breadth (I mean its breadth near the mountains<sup>6</sup>) less than half its length. Now from Luna to Pisa the distance is more than four hundred stadia; and thence to Volaterrae, two hundred and eighty; and again, from here to Populonium, two hundred and seventy; and from Populonium to Cosa,<sup>7</sup> nearly eight hundred, though some say six hundred. Polybius, however, says the total number of stadia<sup>8</sup> is not so

<sup>1</sup> Literally, "Storks."

<sup>2</sup> Cp. 9. 1. 18, where Strabo refers to the Pelasgi as having "sojourned" at Athens.

<sup>3</sup> "Near the mountains" is very indefinite, but in § 9 following Strabo applies the same phrase to the city of Arretium, adding that this city "is farthest of all in the interior." In the present passage, therefore, he clearly means that the line of greatest breadth runs to the Apennines near Arretium—which is correct.

<sup>7</sup> Often called "Cosa"; so in § 8 following.

<sup>8</sup> From Luna to Cosa.

κοσίους τριάκοντα λέγει. τούτων δ' ἡ μὲν Λούνα πόλις ἐστὶ καὶ λιμὴν, καλοῦσι δ' οἱ Ἕλληνες Σελήνης λιμένα καὶ πόλιν. ἡ μὲν οὖν πόλις οὐ μεγάλη, ὁ δὲ λιμὴν μέγιστός τε καὶ κύλλιστος, ἐν αὐτῷ περιέχων πλείους λιμένας, ἀγχιβαθεῖς πάντας, οἷον ἂν γένοιτο ὁρμητήριον θαλαττοκρατησάντων ἀνθρώπων τοσαύτης μὲν θαλάττης, τοσοῦτον δὲ χρόνον. περικλείεται δ' ὁ λιμὴν ὄρεσιν ὑψηλοῖς, ἀφ' ὧν τὰ πελάγη κατοπτρεύεται καὶ ἡ Σαρδῶ καὶ τῆς ἡύονος ἱκατέρωθεν πολὺ μέρος. μέταλλα δὲ λίθου λευκοῦ τε καὶ ποικίλου γλαυκίζοντος τοσαῦτά τ' ἐστὶ καὶ τηλικαῦτα, μοναδίλους ἐκδιδόντα πλάκας καὶ στύλους, ὥστε τὰ πλείστα τῶν ἐκπρεπῶν ἔργων τῶν ἐν τῇ Ἰώμῃ καὶ ταῖς ἄλλαις πόλεσιν ἐντείθεν ἔχειν τὴν χορηγίαν· καὶ γὰρ εὐεξάγωγός ἐστιν ἡ λίθος, τῶν μετὰλλων ὑπερκειμένων τῆς θαλάττης πλησίον, ἐκ δὲ τῆς θαλάττης

<sup>1</sup> Strabo postpones his estimates of the remaining distances (Cosa (Gravisce) Purgi-Ostia), totalling (about) 740 stadia, to § 8 following. Following Grackard, Meineke unwarrantedly indicates a lacuna in the text immediately after "some say six hundred," thinking Strabo must have added at that point the distance from Cosa to Ostia. Thus he makes the figures of Polybius (whose original statement, unfortunately, is now lost) apply to the entire distance from Luna to Ostia. But by measurement on Kiepert's wall-map of Ancient Italy, 1330 stadia proves to be a very close estimate for the distance, along the coastal-roads from Luna to Cosa.

<sup>2</sup> That is, "Harbour of the Moon" ("Moon-Harbour"). Cp. "Harbour of Monestheus" (3. 1. 9) and "Harbour of Monococcus" (4. 6. 3), each phrase meaning the city as well as the harbour. The Gulf of Spezia (its dimensions are seven miles by three) is one of the finest harbours in the world. It is the chief station of the Italian navy, and has at its head a dockyard and arsenal.

## GEOGRAPHY, §. 2. 5

much as one thousand three hundred and thirty.<sup>1</sup> Of these, take first Luna; it is a city and also a harbour, and the Greeks call the city as well as the harbour "Harbour of Selene."<sup>2</sup> The city, indeed, is not large, but the harbour is both very large and very beautiful, since it includes within itself several harbours, all of them deep up to the very shore,—just such a place as would naturally become the naval base of a people who were masters of so great a sea for so long a time. And the harbour is shut in all round by high mountains, from which the high seas are to be seen, as also Sardo,<sup>3</sup> and a considerable stretch of the shore on either side. And the quarries of marble,<sup>4</sup> both white and mottled bluish-grey marble, are so numerous, and of such quality (for they yield monolithic slabs and columns), that the material for most of the superior works of art<sup>5</sup> in Rome and the rest of the cities are supplied therefrom; and, indeed, the marble is easy to export, since the quarries lie above the sea and

<sup>1</sup> Sardinia. Tozer (*Selections*, p. 144) thinks Strabo must have meant Corsica, since Sardinia is 180 miles distant.

<sup>2</sup> Now the quarries of Carrara.

<sup>3</sup> For specific references to Roman "works of art" in stone, see §. 3. 8.

<sup>4</sup> For a full discussion of stones of all kinds, and their uses at Rome and elsewhere, see the *Natural History* of Pliny, Book XXXVI. See also W. G. Renwick's *Marble and Marble Working* (1909), pp. 20 ff. and 60 ff. Dr. J. S. Flett (*Encyc. Brit.*, s.v. "Marble") says: "Stone from this district was employed in Rome for architectural purposes in the time of Augustus, but the finer varieties, adapted to the needs of the sculptor, were not discovered until some time later." The best works of Michelangelo and Canova were executed in Carrara marble; and the best sculptors of to-day prefer to use this particular marble.

near it, and since the Tiber in its turn takes up the cargo from the sea and conveys it to Rome. And the wooden material for the buildings, in beams that are very straight and very long, is for the most part supplied by Tyrrhenia, since by means of the river it can be brought down directly from the mountains. Now between Luna<sup>1</sup> and Pisa is the Macra,<sup>2</sup> which many of the historians have used as the boundary between Tyrrhenia and Liguria.<sup>3</sup> As for Pisa, it was founded by those Pisatæ who lived in the Peloponnesus, who made the expedition to Ilium with Nestor and on the return voyage went astray, some to Metapontium, and others to the territory of Pisa, though all of them were called Pylæans. Pisa is situated between, and at the very confluence of, two rivers, the Arnus and the Ausar, of which the former runs from Arretium, with great quantities of water (not all in one stream, but divided into three streams), and the latter from the Apennine Mountains; and when they unite and form one stream they heave one another up so high by their mutual resistance that two persons standing on the opposite banks cannot even see each other; and hence, necessarily, voyages inland from the sea are difficult to make; the length of the voyage is about twenty stadia. And the following fable is told: when these rivers first began to flow down from the mountains, and their course was being hindered by the natives for fear that they would unite in one

harbour, Strabo must either have meant the harbour, not the city, of Luna, or else have thought the city was situated on the harbour.

<sup>2</sup> The number of men in these battalions is uncertain, since the Greek word might mean any regular body of

stream and deluge the country, the rivers promised not to deluge it and kept their pledge. Again, Pisa is reputed to have been prosperous on a time, and at the present time it is not without repute, on account of its fertility, its stone-quarries, and its timber for ship-building; in ancient times, indeed, they utilised this latter material to meet the perils that faced them on the sea (for they were, to begin with, more warlike than the Tyrrheni, and their warlike spirit was sharpened by the Ligures, bad neighbours living at their flank), but at the present time most of it is being used up on the buildings at Rome, and also at the villas, now that people are devising palaces of Persian magnificence.

6. As for the Volaterrani, their country is washed by the sea and their settlement is in a deep ravine; in the ravine there is a high hill, which is precipitous on all sides and flat on the crest, and it is on this hill that the walls of the city are situated. The ascent from the base to the crest is fifteen stadia, an ascent that is sharp all the way up, and difficult to make. This is where some of the Tyrrheni and of those who had been proscribed by Sulla assembled; and, on filling out four battalions,<sup>1</sup> they withstood a siege for two years, and even then retired from the place only under a truce. As for Populonium, it is situated on a high promontory that makes an abrupt descent into the sea and forms a peninsula; it too sustained a siege at about the same time as Volaterrae. Now although the town is wholly desert except for the temples and a few dwellings, the port-town, which has a little harbour and two docks

<sup>3</sup> Literally, "oiled together"; hence not "melted together" merely (the meaning given by the dictionaries and the editors in general), or "reduced to iron bars" (Cassaubon and du Theil). Strabo speaks of "iron," not "iron-ore"; and he does not mean to say that iron-ore was not melted at all on the island. Indeed, Diodorus Siculus (5. 13) tells us in detail how the people there broke up the masses of

at the base of the mountain, is better peopled; and in my opinion this is the only one of the ancient Tyrrhenian cities that was situated on the sea itself; and my reason is the country's lack of harbours—precisely the reason why the founders would avoid the sea altogether, or else would throw forward defences towards the sea, so as not to be exposed, a ready prey, to any who might sail against them. Again, beneath the promontory there is a place for watching the tunny-fish. And in looking down from the city you can see, albeit from afar and with difficulty, the island of Sardo, and, nearer, the island of Cyrenus<sup>1</sup> (about sixty stadia distant from Sardo), and, much better than these, the island of Aethalia;<sup>2</sup> Aethalia is closer to the mainland, since it is distant only about three hundred stadia, the same as its distance from Cyrenus. This place is the best point of departure from the mainland to the three aforesaid islands. I myself saw these islands when I went up to Poplonium, and also some mines out in the country that had failed. And I also saw the people who work the iron that is brought over from Aethalia; for it cannot be brought into complete coalescence<sup>3</sup> by heating in the furnaces on the island; and it is brought over “iron-rock,” and “burnt” and “melted” the pieces in “ingenious furnaces”; how they divided the resulting mass into lumps of convenient size, in form similar to large sponges; and how they sold the lumps to merchants, who took them over to the various markets on the mainland. Hence Strabo is thinking primarily of the high temperature necessary to bring the iron from a brittle and spongy to a soft and tough texture; but for the lack of wood on the island (see Boeckmann on *Aristot. Mirab.* c. 93) any further working of the iron there was wholly impracticable. On the kinds of iron and how to temper it, see Pliny 34. 41.

<sup>2</sup> In a letter to Forbiger, Meineke suggested *deiar* for *dear*; and Forbiger so reads.

<sup>1</sup> "Immediately from the mines" might imply, of course, that the particular supply that went to Poplonium was, according to Strabo, merely *ore* as dug from the mines.

<sup>2</sup> Aristotle (*Meteor.* c. 93), speaking of this same island, says, on the authority of others, that what was once a copper mine gave out, and that long thereafter iron appeared

## GEOGRAPHY, 5. 2. 6

immediately from the mines to the mainland.<sup>1</sup> However, this is not the only remarkable thing about the island; there is also the fact that the diggings which have been mined are in time filled up again,<sup>2</sup> as is said to be the case with the ledges of rocks in Rhodes, the marble-rock in Paros, and, according to Cleitarchus, the salt-rock in India.<sup>3</sup> Neither, then, is Kratosthenes correct, when he says that neither Cyrrus nor Sardo can be seen from the mainland, nor Artemidorus, when he says that both islands lie in the high sea within twelve hundred stadia; for even supposing they were visible to some people at that distance, they could not have been so to me, at least, or else not to the extent of their being seen clearly, and particularly Cyrrus. Again, there is at Aethalia a Portus Argous,<sup>4</sup> from the ship "Argo," as they say; for when Jason, the story goes, was in quest of the abode of Circe, because Medea wished to see the goddess,<sup>5</sup> he sailed to this port; and, what is more, because the scrapings, which the Argonauts formed when they used their strigils, became congealed, the pebbles on the shore remain variegated still to this day. Now mythical stories of this sort are proofs of what I have been saying: that Homer was not wont to fabricate everything on his own account, but, because he heard many such stories told over and over again, he was wont on his own account to add to them by lengthening the distances and making the settings more remote; and that, just as he threw the setting of in the same mine—"the iron which is now used by the inhabitants of Poplonium."

<sup>3</sup> It is impossible to say what "Chorographer" Strabo refers to here; and in 5. 2. 8, 6. 1. 11, 6. 2. 1 ("The Chorography"), 6. 2. 11, 6. 3. 10. The fact that the dimensions are given in Roman miles indicates that he does not allude to Eratosthenes, or Polybius, or Artemidorus. Casaubon thinks he means the "Map of Agrippa." his Odysseus out into the ocean, so similarly he threw the setting of his Jason there, because a wandering had actually taken place in the life of Jason too as well as in that of Odysseus—just as also in that of Menelaus.<sup>1</sup> So much, then, for the island of Aethalia.

7. But Cyrenus is by the Romans called Corsica. It affords such a poor livelihood—being not only rough but in most of its parts absolutely impracticable for travel—that those who occupy the mountains and live from brigandage are more savage than wild animals. At any rate, whenever the Roman generals have made a sally, and, falling suddenly upon the strongholds, have taken a large number of the people as slaves, you can at Rome see, and marvel at, the extent to which the nature of wild beasts, as also that of battenning cattle, is manifested in them; for either they cannot endure to live in captivity, or, if they live, they so irritate their purchasers by their apathy and insensibility, that, even though the purchasers may have paid for them no more than an insignificant sum, nevertheless they repent the purchase. But still there are some habitable parts in the island, and what might be called towns, namely, Blesinon, Charax, Eniconiae and Vapanes.<sup>2</sup> The length of the island, says the Chorographer,<sup>3</sup> is one hundred and sixty miles, and the breadth seventy; but the length of Sardo is two hundred and twenty, and the breadth ninety-eight. According

to others, however, the perimeter of Cynus is called about three thousand<sup>1</sup> two hundred stadia, and of Sardo as much as four thousand. The greater part of Sardo is rugged and not at peace, though much of it has also soil that is blessed with all products—especially with grain. As for cities, there are indeed several, but only Caralis and Sulchi are noteworthy. But the excellence of the places is offset by a serious defect, for in summer the island is unhealthy, particularly in the fruitful districts; and it is precisely these districts that are continually ravaged by those mountaineers who are now called Dingebes; <sup>2</sup> in earlier times, however, their name was Iolaüs; for Iolaus, it is said, came hither, bringing with him some of the children of Heracles, and took up his abode with the barbarians who held the island (the latter were Tyrrhēni). Later on, the Phœnicians of Carthage got the mastery over them, and along with them carried on war against the Romans; but upon the defeat of the Phœnicians, everything became subject to the Romans. There are four tribes of the mountaineers, the Parati, the Sossinati, the Balari, and the Aconites, and they live in caverns; but if they do hold a bit of land that is fit for sowing, they do not sow even this diligently; instead, they pillage the lands of the farmers—not only of the farmers on the island, but they actually sail against the people on the opposite coast, the Pisatæ in particular. Now the military governors who are sent to the island resist the mountaineers part of the time, but sometimes they grow weary of it—when it is not profitable continuously to maintain a camp in unhealthy places, and then the only thing left for them is to employ

stratagems; and so, having observed a certain custom of the barbarians (who come together after their forays for a general celebration extending over several days), attack them at that time and overpower many of them. Again, Sardo produces the runs that grow goat-hair instead of wool; they are called, however, "musmones,"<sup>2</sup> and it is with the hides of these that the people there make their cuirasses. They also use a small leather shield and a small dagger.

8. The islands can be seen clearly enough from any part of the country between Poplonium and Pisa; they are oblong and approximately parallel, all three of them, and they point towards the south and Libya; Aethalia, however, falls considerably short of the others in size. Further, the shortest passage to Sardo from Libya, according to the Chorographer, is three hundred miles.<sup>3</sup> After Poplonium comes Cossa, a city slightly above the sea; that is, there is a high hill at the head of a gulf, and the settlement is on this hill; and beneath lies the Harbour of Heracles and near it is a lagoon and, along the promontory that lies above the gulf, a station for observing the tunny-fish; for along the shore the tunny-fish follow not only the acorns but also the purple fish,<sup>4</sup> beginning their course at the outer sea and going even as far as Sicily.<sup>4</sup> As one sails along the coast from Cossa to Ostia one comes to some small towns: Gravisce, Pyrgi, Alsium and Fregena. To Gravisce, then, the distance is three hundred stadia;

<sup>2</sup> Strabo probably wrote two hundred miles (the distance given by Pliny, 3. 13).

and in the interval is a place called Regis Villa. History tells us that this was once the palace of Maleos, the Pelasgian, who, it is said, although he held dominion in the places mentioned, along with the Pelasgi who helped him to colonise them, departed thence to Athens. And this is also the stock to which the people belong who have taken and now hold Agylla.<sup>1</sup> Again, from Graviscei to Pyrgi the distance is a little less than one hundred and eighty stadia; it is the port-town of the Caeretani, thirty stadia away. And Pyrgi has a temple of Eilethya,<sup>2</sup> an establishment of the Pelasgi; it was once rich, but it was robbed by Dionysius, the tyrant of the Sicilians, on his expedition to Cyrrus. And again, from Pyrgi to Ostia the distance is two hundred and sixty stadia; and in the interval are Alsium and Fregena. Thus much for the coastline of Tyrrhenia.

9. In the interior there are still other cities besides those already mentioned—Arretium, Perusia, Volsinii, and Sutrium; and, besides these, numerous small towns—Blern, Ferentinum, Falerii, Faliscum, Nepesin, Statonia, and several others; some of them are constituted as of old, while others the Romans have colonised, or else have brought low, as they did Veii,<sup>3</sup> which had oftentimes gone to war with them, and as they did Fidenae.<sup>4</sup> Some, however, call the Falerii, not "Tyrrheni,"<sup>5</sup> but "Falisci," a special and distinct tribe; again, others call Faliscum a city with

<sup>3</sup> A few lines above, Strabo appears to have counted "Falerii" and "Faliscum" as separate cities; perhaps by "Faliscum" he meant "Aequum Faliscum." The old city of "Falerii" (or "Falerium") was occupied both by the Falerii (a Tyrrhenian people) and by the Falisci (a people of Sabine origin, perhaps, with a dialect closely akin to Latin); the latter, however, inhabited a large tract of surrounding country as well as the city itself. The ancient writers usually distinguished between the people "Falisci" and the

a special language all its own; and others mean by Faliscum "Aequum Faliscum,"<sup>1</sup> which is situated on the Flaminian Way between Oereli and Rome.<sup>2</sup> The city of Feronia is at the foot of Mount Soracte, with the same name as a certain native goddess, a goddess greatly honoured by the surrounding peoples; her sacred precinct is in the place; and it has remarkable ceremonies, for those who are possessed by this goddess walk with bare feet through a great heap of embers and ashes without suffering;<sup>3</sup> and a multitude of people come together at the same time, for the sake not only of attending the festal assembly, which is held here every year, but also of seeing the aforesaid sight. But Arretium, which is near the mountains, is farthest of all in the interior; at any rate, it is twelve hundred stadia distant from Rome, while Clusium is only eight hundred; and Perugia is near these two. The lakes, too, contribute to the prosperity of Tyrrhenia, being both large and numerous; for they are navigable, and also give food to quantities of fish and to the various marsh-birds; quantities of cat-tail, too, and papyrus, and downy plumes of the reed, are transported by rivers into Rome—rivers which are sent forth by the lakes as far as the Tiber; and among these are the Ciminian Lake,<sup>4</sup> the lake near Volsinii,<sup>5</sup> the lake near

city, but the city itself was often called "Falisci" (or "Faliscum") as well as "Falerii." The site of the old city is now occupied by Civita Castellana, while that of the new Roman city, in the plains, is marked by the ruins of a church called Santa Maria di Falleri; see *Encyc. Brit.* under "Falerii" (Thomas Ashby) and "Falisci" (R. S. Conway).

Now the one towards Ariminum is better, since the mountains become considerably lower there; and yet, since the defiles on this pass were carefully guarded, Hannibal was forced to choose the more difficult pass, but, for all that, he got control of it, after having conquered Flaminius in great battles. Furthermore, there are abundant hot springs in Tyrrhenia, and, because of the fact that they are near Rome, they have a population not less than the springs at Baiae, which are by far the most widely renowned of all.<sup>6</sup>

10. Alongside Tyrrhenia, on the part toward the east, lies Ombrica;<sup>7</sup> it takes its beginning at the Apennines and extends still further beyond as far as the Adriatic; for it is at Ravenna<sup>8</sup> that the Ombrici begin, and they occupy the nearby territory and also, in order thereafter, Sarsina, Ariminum, Sena, Camarinum.<sup>9</sup> Here, too, is the Aesis River,

Many of the editors, following Ortel, delete "and Marinum" as being an interpolation.

Carsuli,<sup>1</sup> and Mevania, past which flows the Teneas (this too brings the products of the plain down to the Tiber on rather small boats); and, besides, still other settlements, which have become filled up with people rather on account of the Way itself than of political organisation; these are Forum Flaminium, and Nuceria (the place where the wooden utensils are made), and Forum Sempronium. Secondly, to the right of the Way, as you travel from Ocrieli to Ariminum, is Interamna, and Spoletium, and Aesium, and Camertes<sup>2</sup> (in the very mountains that mark the boundary of the Picentine country);<sup>3</sup> and, on the other side of the Way, Ameria, and Tuder (a well-fortified city), and Hispellum, and Iguvium, the last-named lying near the passes that lead over the mountain. Now as a whole Umbria is blessed with fertility, though it is a little too mountainous and nourishes its people with spelt rather than with wheat. The Sabine country also, which comes next in order after Umbria, is mountainous, and it lies alongside Umbria in the same way that Umbria lies alongside Tyrrhenia; and further, all parts of the Latin country that are near to these parts and to the Apennine Mountains are rather rugged. These two tribes<sup>4</sup> begin, then, at the Tiber and Tyrrhenia, and extend to that stretch of the Apennine Mountains near the Adriatic which slants slightly inland,<sup>5</sup> although Umbria passes on beyond the mountains, as I have said,<sup>6</sup> as far as the Adriatic. So much, then, for the Umbrii.

1. The country the Sabini live in is narrow, but taken lengthwise it reaches even a thousand stadia from the Tiber and the little town of Nomentum, as far as the country of the Vestini. They have but few cities and even these have been brought low on account of the continual wars; they are Amiternum, and Reate (near which is the village of Interocera, and also the cold springs of Cotiliae,<sup>1</sup> where people cure their diseases,<sup>2</sup> not only by drinking from the springs but also by sitting down in them). Foruli<sup>3</sup> too belongs to the Sabini—a rocky elevation naturally suited to the purposes of revolt rather than habitation. As for Cures, it is now only a small village, but it was once a city of significance, since it was the original home of two kings of Rome, Titius Tatius and Numa Pompilius; hence, the title “Curites”<sup>4</sup> by which the public orators address the Romans. Trebula, Eretum, and other such settlements might be ranked as villages rather than cities. As a whole the land of the Sabini is exceptionally well-planted with the olive and the vine, and it also produces acorns in quantities; it is important, also, for its domestic cattle of every kind; and in particular the fame of the Reate-breed of mules is remarkably widespread. In a word, Italy as a whole is an excellent nurse both of young animals and of fruits, although different species in different parts take the first prize. The

<sup>4</sup> τε, Corais starts; Meineke deletes; wrongly.

<sup>5</sup> For ὑπὲρ, Corais reads ἀπὸ; so the later editors. *ἐπὶ* is not at all objectionable; it does not deny the fact that the *Via Salaria* begins at the gate.

<sup>5</sup> The old-fashioned simplicity and sternness of the Sabine race was proverbial (see 4. 2. 12, Martial's *Epigrammata* 10. 32, 11. 15, Horace's *Odes* 3. 6. 38, *Epistle* 2. 1. 25, Ovid's *Metamorphoses* 14. 797). And because of these qualities they were by some writers regarded as having originally come from Laconia (Dionysius Hal., *Antiq. Rom.*, 1. 1, Justinus 20. 1). Others, by emending six words of the text (see critical notes 2 and 3 above) make Strabo say: "And the bravery and

Sabini not only are a very ancient race but are also the indigenous inhabitants (and both the Picentini and the Samnites are colonists from the Sabini,<sup>1</sup> and the Leucani from the Samnites,<sup>2</sup> and the Brettii<sup>3</sup> from the Leucani).<sup>4</sup> And the old-fashioned ways of the Sabini might be taken as an evidence of bravery, and of those other excellent qualities which have enabled them to hold out to the present time.<sup>5</sup> Fabius, the historian, says that the Romans realised their wealth for the first time when they became established as masters of this tribe. As for the roads that have been constructed through their country, there is not only the Via Salaria (though it does not run far) but also the Via Nomentana which unites with it at Eretum<sup>6</sup> (a village of the Sabine country, situated beyond the Tiber), though it begins above the same gate, Porta Collina.<sup>7</sup>

those other excellent qualities which have enabled them to hold out to the present time might be taken as an evidence of their antiquity."

<sup>6</sup> Augustus extended the highway to the Adriatic in 17 B.C. Strabo seems to avoid applying either "Via Salaria" or "Via Nomentana" to the extension of the road, although obviously he has in mind the entire journey, as "through their country" shows. There seems to be no evidence in the ancient writers for the assumption of Kraiser that "Via Salaria" applied to the whole journey; and the clause "though it does not run far," which he believes should be placed after "Via Nomentana," denies it. Here, as often, Strabo's consciousness has caused the commentators no little worry.

<sup>7</sup> The Porta Collina was the gate of the Servian wall at the north-eastern end of the Quirinal.

Latin country. For the Aeci,<sup>1</sup> the Volsci, the Hernici, and also the aborigines who lived near Rome itself, the Rutuli who held the old Ardea, and other groups, greater or less, who lived near the Romans of that time, were all in existence when the city was first founded; and some of these groups, since they were ranked under no common tribe, used to be allowed to live autonomously in separate villages. It is said that Aeneas, along with his father Anchises and his son Ascanius, after putting in at Laurentum, which was on the shore near Ostia and the Tiber, founded a city a little above the sea, within about twenty-four stadia from it; and Latinus, the king of the aborigines, who lived in this place where Rome now is, on making them a visit, used Aeneas and his people as allies against the neighbouring Rutuli who occupied Ardea (the distance from Ardea to Rome is one hundred and sixty stadia), and after his victory founded a city near by, naming it after his daughter Lavinia; and when the Rutuli joined battle again, Latinus fell, but Aeneas was victorious, became king, and called his subjects "Latini"; and after the death of both Aeneas and his father Anchises, Ascanius founded Alba on Mount Albanus, which Mount is the same distance from Rome as Ardea. Here the Romans in company with the Latini—I mean the joint assembly of all their magistrates—offered sacrifice to Zeus; and the assembly put one of the young nobles in charge of the city as governor for the time of the sacrifice. But it is four hundred

years later that the stories about Amollius<sup>1</sup> and his brother Numitor are placed—stories partly fabulous but partly closer to the truth. In the first place, both brothers succeeded to the rule of Alba (which extended as far as the Tiber) from the descendants of Ascanius; but Amollius, the younger, elbowed the elder out and reigned alone; but since Numitor had a son and a daughter, Amollius treacherously murdered the son while on a hunt, and appointed the daughter, in order that she might remain childless, a priestess of Vesta, so as to keep her a virgin (she is called Rhea Silvia); then, on discovering that she had been ruined (for she gave birth to twins), instead of killing her, he merely incarcerated her, to gratify his brother, and exposed the twins on the banks of the Tiber in accordance with an ancestral custom. In mythology, however, we are told that the boys were begotten by Ares, and that after they were exposed people saw them being suckled by a she-wolf; but Faustulus, one of the swineherds near the place, took them up and reared them (but we must assume that it was some influential man, a subject of Amollius, that took them and reared them), and called one Romulus and the other Romus;<sup>2</sup> and upon reaching manhood they attacked Amollius and his sons, and upon the defeat of the latter and the reversion of the rule to Numitor, they went back home and founded Rome—in a place which was suitable more as a matter

<sup>1</sup> The Latin spelling is "Amulius."

<sup>2</sup> The best MSS. here read "Romus," not Remus, though the reverse is true in the use of the word later on; yet note that Strabo is now quoting the mythical version of the story.

<sup>3</sup> Strabo almost certainly means the "Arvalis Fratres" ("Field-Brothers"), so-called, according to Varro (*De Ling. Lat.* 5. 85), from their offering public sacrifices that the fields (*arva*) may bring forth fruits. The "Arvalis Fratres" was a college of twelve priests, which, according to Roman legend (cp. Gellius 7. 7), originated with Romulus himself. The college was still in existence in A.D. 325.

of necessity than of choice;<sup>1</sup> for neither was the site naturally strong, nor did it have enough land of its own in the surrounding territory to meet the requirements of a city,<sup>2</sup> nor yet, indeed, people to join with the Romans as inhabitants; for the people who lived thereabouts were wont to dwell by themselves (though their territory almost joined the walls of the city that was being founded), not even paying any attention to the Albani themselves. And there was Collatia, and Antemnae, and Fidenae, and Labicum, and other such places—then little cities, but now mere villages, or else estates of private citizens—all at a distance from Rome of thirty stadia, or a little more. At any rate, between the fifth and the sixth of those stones which indicate the miles from Rome there is a place called "Festi," and this, it is declared, is a boundary of what was then the Roman territory; and, further, the priests<sup>3</sup> celebrate sacrificial festivals, called "Ambarvia,"<sup>4</sup> on the same day, both there and at several other places, as being boundaries. Be this as it may, a quarrel arose at the time of the founding of the city, and as a result Remus was slain.<sup>5</sup> After the founding Romulus set about collecting a promiscuous rabble by designating as an asylum a sacred precinct between the Arx and the Capitolium,<sup>6</sup> and by declaring citizens all the neighbours who fled

<sup>1</sup> In Latin, "Ambarvalia"; so called from the leading of the sacrificial victims "round the fields." The festival took place May 27, 29 and 30 (Roman calendar).

thither for refuge. But since he could not obtain the right of internarrriage for these, he announced one horse-race, sacred to Poseidon, the rite that is still to-day performed; and when numerous people, but mostly Sabini, had assembled, he bade all who wanted a wife to seize the maidens who had come to the race. Titus Tatius, the king of the Curites, went to avenge<sup>1</sup> the outrage by force of arms, but compromised with Romulus on the basis of partnership in the throne and state. But Tatius was treacherously murdered in Lavinium, and then Romulus, with the consent of the Curites, reigned alone. After Romulus, Numa Pompilius, a fellow-citizen of Tatius, succeeded to the throne, receiving it from his subjects by their own choice. This, then, is the best accredited story of the founding of Rome.

3. But there is another one, older and fabulous, in which we are told that Rome was an Arcadian colony and founded by Evander:—When Heracles was driving the cattle of Geryon he was entertained by Evander; and since Evander had learned from his mother Nicostrate (she was skilled in the art of divination, the story goes) that Heracles was destined to become a god after he had finished his labours, he not only told this to Heracles but also consecrated to him a precinct and offered a sacrifice to him after the Greek ritual, which is still to this day kept up in honour of Heracles. And Coelius himself,<sup>2</sup> the Roman historian, puts this down as proof that Rome was founded by Greeks—the fact that at Rome the hereditary sacrifice to Heracles is after the Greek ritual. And the Romans honour also the

4. Be that as it may, the Latini at the outset were few in number and most of them would pay no attention to the Romans; but later on, struck with amazement at the prowess both of Romulus and of the kings who came after him, they all became subjects. And after the overthrow of the Aequi,<sup>2</sup> of the Volsci, and of the Hernici, and, still before that, of both the Rutuli and the aborigines (and besides these, certain of the Rhaeci,<sup>3</sup> as also of the Argyrusci<sup>4</sup> and the Praeferni),<sup>5</sup> the whole country that belonged to these peoples was called Latium. The Pomptine Plain, on the confines of the Latini, and the city of Apiola, which was destroyed by Tarquinius Priscus, used to belong to the Volsci. The Aequi are the nearest neighbours of the Curites; their cities, too, were sacked by Tarquinius Priscus; and his son captured Suessa, the metropolis of the Volsci. The Hernici used to live near Lanuvium, Alba, and Rome itself; and Aricia, also, and Tellenae and Antium were not far away. At the outset the Albani lived in harmony with the Romans, since they spoke the same language and

<sup>1</sup> "Rhaeci," otherwise unknown, is probably a corruption of "Aricini," the inhabitants of Aricia, the city to which Strabo refers in this paragraph and also in 5. 3. 12.

<sup>2</sup> "Argyrusci," otherwise unknown, is probably a corruption of "Aurunci" (cp. Livy 2. 16, 17, 26 and Dionysius, *Antiq. Rom.* 6. 32, 37).

<sup>3</sup> By "Praeferni" Strabo almost certainly refers to the Privernates, whose city was Privernum, now in ruins near Piperno.

were Latini, and though they were each, as it happened, ruled by kings, separate and apart, none the less they not only had the right of intermarriage with one another, but also held sacrifices—those at Alba—and other political rights in common; later on, however, war arose between them, with the result that all Alba was destroyed except the temple, and that the Albani were adjudged Roman citizens. As for the other neighbouring cities, some of them too were destroyed, and others humiliated, for their disobedience, while some were made even stronger than they were because of their loyalty. Now at the present time the seaboard is called Latium from Ostia as far as the city of Sinuessa, but in earlier times Latium had extended its seaboard only as far as Circæum. Further, in earlier times Latium did not include much of the interior, but later on it extended even as far as Campania and the Samnitæ and the Peligni and other peoples who inhabit the Apennines.

5. All Latium is blest with fertility and produces everything, except for a few districts that are on the seaboard—I mean all those districts that are marshy and sickly (such as those of the Ardeatæ, and those between Antium and Lanuvium as far as the Pomptine Plain, and certain districts in the territory of Setia and the country round about Tarracina and the Circæum), or any districts that are perhaps mountainous and rocky; and yet even these are not wholly untilled or useless, but afford rich pasture grounds, or timber, or certain fruits that grow in marshy or rocky ground (the Caccuban Plain, although marshy, supports a vine that produces the best of wine, I mean the tree-vine).<sup>1</sup> The seaboard

cities belonging to the Latini are, first, Ostia: it is harbourless on account of the silting up which is caused by the Tiber, since the Tiber is fed by numerous streams. Now although it is with peril that the merchant-ships anchor far out in the surge, still, the prospect of gain prevails; and in fact the good supply of the tenders which receive the cargoes and bring back cargoes in exchange makes it possible for the ships to sail away quickly before they touch the river, or else, after being partly relieved of their cargoes, they sail into the Tiber and run inland as far as Rome, one hundred and ninety stadia. Ostia was founded by Ancus Marcius. Such, then, is this city of Ostia. Next comes Antium, it also being a harbourless city. It is situated on masses of rock, and is about two hundred and sixty stadia distant from Ostia. Now at the present time Antium is given over to the rulers for their leisure and relief from the cares of state whenever they get the opportunity, and therefore, for the purposes of such sojourns, many very costly residences have been built in the city; but in earlier times the people of Antium used to possess ships and to take part with the Tyrrheni in their acts of piracy, although at that time they were already subjects of the Romans. It is for this reason that Alexander, in earlier times, sent in complaints, and that Demetrius,<sup>1</sup> later on, when he sent back to the Romans what pirates he had captured, said that, although he was doing the Romans the favour of sending back the captives because of the kinship between the Romans and the Greeks, he did not deem it right for men to be sending out bands of pirates at the same time that they were in command of Italy, or to build in

their Forum a temple in honour of the Dioscuri, and to worship them, whom all call Saviours, and yet at the same time send to Greece people who would plunder the native land of the Dioscuri. And the Romans put a stop to such practices. Midway between these two cities is Lavinium, which has a temple of Aphrodite that is common to all the Latini, though the Ardeatae, through attendants, have the care of it. Then comes Laurentum. And beyond these cities lies Ardea, a settlement of the Rutuli, seventy stadia inland from the sea. Near Ardea too there is a temple of Aphrodite, where the Latini hold religious festivals. But the places were devastated by the Samnites; and although only traces of cities are left, those traces have become famous because of the sojourn which Aeneas made there and because of those sacred rites which, it is said, have been handed down from those times.

6. After Antium, within a distance of two hundred and ninety stadia, comes Circaeum, a mountain which has the form of an island, because it is surrounded by sea and marshes. They further say that Circaeum is a place that abounds in roots—perhaps because they associate it with the myth about Circe. It has a little city and a temple of Circe and an altar of Athene, and people there show you a sort of bowl which, they say, belonged to Odysseus. Between Antium and Circaeum is the River Storas, and also, near it, an anchoring-place. Then comes a stretch of coast that is exposed to the south-west wind, with no shelter except a little harbour near Circaeum itself. Beyond this coast, in the interior, is the Pomptine Plain. The country that joins this latter was formerly inhabited by the Ausones, who also

held Campania. After these come the Osci; they too had a share in Campania; but now everything belongs to the Latini as far as Sinuessa, as I said.<sup>1</sup> A peculiar thing has taken place in the case of the Osci and the tribe of the Ausones. Although the Osci have disappeared, their dialect still remains among the Romans, so much so that, at the time of a certain traditional competition, poems in that dialect are brought on the stage and recited like mimes;<sup>2</sup> again, although the Ausones never once lived on the Sicilian Sea, still the high sea is called "Ausonian." Next, within one hundred stadia of Circaeum, is Tarracina, which was formerly called "Trachine"<sup>3</sup> from its actual character. In front of Tarracina lies a great marsh, formed by two rivers; the larger one is called Ausidus.<sup>4</sup> It is here that the Appian Way first touches the sea; it has been constructed from Rome as far as Brentesium<sup>5</sup> and is the most travelled of all; but of the cities on the sea it touches only these: Tarracina, and those that come next in order after it, Formiae, Minturnae, and Sinuessa, and those at the end—Taras<sup>6</sup> and Brentesium. Near Tarracina, as you go toward Rome, there is a canal which runs alongside the Appian Way, and is fed at numerous places by waters

<sup>1</sup> Strabo assumed that "Trachine" was derived from the Greek word "trachys" ("rugged"). Cp. Horace, *Sat.* 1. 5. 26: "Impositum saxis latecudentibus Anxur" (Tarracina).

<sup>2</sup> If the MSS. are right, Strabo is in error here. He must have meant the Ufens (now Ufente); the other river was the Amasenus (now Amaseno).

<sup>3</sup> One of the old spellings of Brundisium; the other was "Brendesium" (cp. Ptolemaeus, 3. 2. 12, and Polybius, 21. 24). "In the language of the Messapii the stag's head is called 'brentesium'" (3. 3. 6); hence the name of the city.

<sup>4</sup> The old name of Tarentum.

from the marshes and the rivers. People navigate the canal, preferably by night (so that if they embark in the evening they can disembark early in the morning and go the rest of their journey by the Way), but they also navigate it by day. The boat is towed by a mule.<sup>1</sup> Next after Tarracina comes Formiae, founded by the Laconians, and formerly called "Horniae" because of its good "hormos."<sup>2</sup> And those people also named the intervening gulf "Caietas,"<sup>3</sup> for the Laconians call all hollow things "Caietas"; but some say the gulf was named after the nurse of Aeneas.<sup>4</sup> It has a length of one hundred stadia, beginning at Tarracina and extending as far as the promontory of like name.<sup>5</sup> There are wide-open caverns of immense size at this place, which have been occupied by large and very costly residences; from here to Formiae the distance is forty stadia. Midway between Formiae and Sinuessa is Minturnae, which is about eighty stadia distant from each. Through Minturnae flows the River Liris, formerly called the "Clanis." It runs from the interior, out of the Apennine Mountains and the country of the Vestini, past Fragellae, a village (it was formerly a famous city), and empties into a sacred precinct which is much revered by the people in Minturnae; the precinct is situated below the city. In the high sea, off the caverns and visible thence most of the time, are situated two islands,

"Caietanus Sinus." But, as the context shows, "the intervening gulf" means the gulf between Caieta and Tarracina. For the meaning of the Spartan word "Caietas," see 8. 5. 7.

Pandateria and Pontia,<sup>1</sup> which, though small, are well peopled; they are not far distant from one another, but they are two hundred and fifty stadia from the mainland. The Caecuban Plain borders on the Gulf of Caietas; and next to the plain comes Fundi, situated on the Appian Way. All these places produce exceedingly good wine; indeed, the Caecuban and the Fundanian and the Setinian belong to the class of wines that are widely famed, as is the case with the Falernian and the Alban and the Statinian. Sinuessa is situated in the Caietan "Kolpos,"<sup>2</sup> and hence its name; for "Kolpos" means "Sinus";<sup>3</sup> and near Sinuessa are hot baths, which are most efficacious for certain diseases.<sup>4</sup> These, then, are the cities of the Latini on the sea.

7. In the interior, the first city above Ostia is Rome, and it is the only city that is situated on the Tiber. With regard to this city, I have already said that it was founded there as a matter of necessity, not as a matter of choice;<sup>5</sup> and I must add that even those who afterwards added certain districts to the settlement could not as masters take the better course, but as slaves must needs accommodate themselves to what had already been founded. The first founders walled the Capitolium and the Palatium and the Quirinal Hill, which last was so easy for outsiders

<sup>1</sup> Strabo now refers to the Roman "Caietanum Sinus," and not to "the intervening gulf" above-mentioned.

<sup>2</sup> According to Pliny (31. 41, these baths cured barrenness in women and insanity in men. Whether they have disappeared, or are to be identified with the waters at Torre di Bagni, is not known.

to ascend that Titus Tatius took it at the first onset, making his attack at the time when he came to avenge the outrage of the seizure of the maidens.<sup>1</sup> Again, Ancus Marcius took in Mt. Caelium and Mt. Aventine, and the plain between them, which were separated both from one another and from the parts that were already walled, but he did so only from necessity; for, in the first place, it was not a good thing to leave hills that were so well fortified by nature outside the walls for any who wished strongholds against the city, and, secondly, he was unable to fill out the whole circuit of hills as far as the Quirinal. Servius, however, detected the gap, for he filled it out by adding both the Esquiline Hill and the Viminal Hill. But these too are easy for outsiders to attack; and for this reason they dug a deep trench and took the earth to the inner side of the trench, and extended a mound about six stadia on the inner brow of the trench, and built thereon a wall with towers from the Colline Gate to the Esquiline. Below the centre of the mound is a third gate,<sup>2</sup> bearing the same name as the Viminal Hill. Such, then, are the fortifications of the city, though they need a second set of fortifications. And, in my opinion, the first founders took the same course of reasoning both for themselves and for their successors, namely, that it was appropriate for the Romans to depend for their safety and general welfare, not on their fortifications, but on their arms and their own valour, in the belief that it is not walls that protect men but men that protect walls. At the outset, then, since the fertile and extensive country round about them belonged to others,<sup>3</sup> and since the terrain of the

city was so easy to attack, there was nothing fortunate in their position to call for congratulation, but when by their valour and their toil they had made the country their own property, there was obviously a concourse, so to speak, of blessings that surpassed all natural advantages; and it is because of this concourse of blessings that the city, although it has grown to such an extent, holds out in the way it does, not only in respect to food, but also in respect to timber and stones for the building of houses, which goes on unceasingly in consequence of the collapses and fires and repeated sales (these last, too, going on unceasingly); and indeed the sales are intentional collapses, as it were, since the purchasers keep tearing down the houses and building new ones, one after another, to suit their wishes.<sup>1</sup> To meet these requirements, then, the Romans are afforded a wonderful supply of materials by the large number of mines, by the timber, and by the rivers which bring these down: first, the Anio, which flows from Alba, the Latin city next to the Marsi,<sup>2</sup> through the plain that is below Alba to its confluence with the Tiber; and then the Nar and the Tenens,<sup>3</sup> the rivers which run through Ombricia down to the same river, the Tiber; and also the Clanis, which, however, runs down thither through Tyrrhenia and the territory of Clusium. Now Augustus Caesar concerned himself about such impairments of the city, organising for protection against fires a militia composed of freedmen, whose duty it was to render assistance,<sup>4</sup>

<sup>1</sup> The "cohortes vigilum" were a night police and fire brigade combined, consisting of seven thousand men, or seven cohorts. They were distributed throughout the city, one cohort to every two of the fourteen "regiones." See Suetonius, *Augustus* 27, and Cassius Dio 53. 26.

and also to provide against collapses, reducing the heights of the new buildings and forbidding that any structure on the public streets should rise as high as seventy feet; but still his constructive measures would have failed by now were it not that the mines and the timber and the easy means of transportation by water still hold out.

8. So much, then, for the blessings with which nature supplies the city; but the Romans have added still others, which are the result of their foresight; for if the Greeks had the repute of aiming most happily in the founding of cities, in that they aimed at beauty, strength of position, harbours, and productive soil, the Romans had the best foresight in those matters which the Greeks made but little account of, such as the construction of roads and aqueducts, and of sewers that could wash out the filth of the city into the Tiber. Moreover, they have so constructed also the roads which run throughout the country, by adding both cuts through hills and embankments across valleys, that their wagons can carry boat-loads; and the sewers, vaulted with close-fitting stones, have in some places left room enough even for wagons loaded with hay to pass through them.<sup>1</sup> And water is brought into the city through the aqueducts in such quantities that veritable rivers flow through the city and the sewers; and almost every house has cisterns, and service-pipes, and copious fountains—with which Marcus Agrippa concerned himself most, though he also adorned the city with

<sup>1</sup> Pliny (36. 24) uses the same figure in describing the dimensions of the sewers constructed by Tarquinius Priscus; (Tarquinius Priscus) *amplitudinem cavis eam fecisse proditur ut rohem faeni large onustam transmitteret.*

many other structures.<sup>1</sup> In a word, the early Romans made but little account of the beauty of Rome, because they were occupied with other, greater and more necessary, matters; whereas the later Romans, and particularly those of to-day and in my time, have not fallen short in this respect either—indeed, they have filled the city with many beautiful structures.<sup>2</sup> In fact, Pompey, the Deified Caesar, Augustus, his sons and friends,<sup>3</sup> and wife and sister, have outdone all others in their zeal for buildings and in the expense incurred. The Campus Martius contains most of these, and thus, in addition to its natural beauty, it has received still further adornment as the result of foresight. Indeed, the size of the Campus is remarkable, since it affords space at the same time and without interference, not only for the chariot-races and every other equestrian exercise, but also for all that multitude of people who exercise themselves by ball-playing, hoop-trundling, and wrestling; and the works of art<sup>4</sup> situated around the Campus Martius, and the ground, which is covered with grass throughout the year, and the crowns of those hills that are above the river and extend as far as its bed, which present to the eye the appearance of a stage-painting—all this, I say, affords a spectacle that one can hardly draw away from. And near this campus is still another campus,<sup>5</sup> with colonnades round about it in very great numbers, and sacred precincts, and three theatres, and an amphitheatre,

and very costly temples, in close succession to one another, giving you the impression that they are trying, as it were, to declare the rest of the city a mere accessory. For this reason, in the belief that this place was holiest of all, the Romans have erected in it the tombs of their most illustrious men and women. The most noteworthy is what is called the Mausoleum,<sup>1</sup> a great mound near the river on a lofty foundation of white marble, thickly covered with ever-green trees to the very summit. Now on top is a bronze image of Augustus Caesar; beneath the mound are the tombs of himself and his kinsmen and intimates;<sup>2</sup> behind the mound is a large sacred precinct with wonderful promenades; and in the centre of the Campus is the wall (this too of white marble) round his crematorium;<sup>3</sup> the wall is surrounded by a circular iron fence and the space within the wall is planted with black poplars. And again, if, on passing to the old Forum, you saw one forum after another ranged along the old one, and basilicas,<sup>4</sup> and temples, and saw also the Capitolium and the works of art there and those of the Palatium and Livia's Promenade, you would easily become oblivious to everything else outside.<sup>5</sup> Such is Rome.

9. As for the rest of the cities of Latium, their positions may be defined, some by a different set of distinctive marks, and others by the best known roads that have been constructed through Latium; for they

<sup>1</sup> Tozer (*Selections*, p. 155) says, "ἑλάνη δὲ ἑλλανίς refer to βασιλικὰς στoάς" and translates, "should see, ranged one after another on either side of this, both basilicas and temples." But the Greek hardly admits of his interpretation.

<sup>2</sup> For a more detailed account of the public works and buildings at Rome, the reader is referred to Pliny 36. 24.

are situated either on these roads, or near them, or between them. The best known of the roads are the Appian Way, the Latin Way, and the Valerian Way. The Appian Way marks off, as far as Sinuessa, those parts of Latium that are next to the sea, and the Valerian Way, as far as the Marsi, those parts that are next to the Sabine country; while the Latin Way is between the two—the Way that unites with the Appian Way at Casilinum, a city nineteen stadia distant from Capua. The Latin Way begins, however, at the Appian Way, since near Rome it turns off from it to the left, and then, passing through the Tusculan Mountain, and over it at a point between the city of Tusculum and the Alban Mountain, runs down to the little city of Algidum and the Inns of Pietæ;<sup>1</sup> and then it is joined by the Labicæ Way. This latter begins at the Esquiline Gate, as also does the Praenestine Way, but it leaves both the Praenestine Way and the Esquiline Plain to the left and runs on for more than one hundred and twenty stadia, and, on drawing near to Labicum (a city founded in early times, once situated on an eminence, but now demolished), leaves both it and Tusculum on the right and comes to an end at Pietæ and the Latin Way; the distance of this place from Rome is two hundred and ten stadia. Then in order, as you proceed on the Latin Way itself, you come to important settlements and the cities of Verentinum, Frusino (past which the Cosa<sup>2</sup> flows), Fabrateria (past which the Trevis<sup>3</sup> flows), Aquinum (it is a large city, and

past it flows a large river, the Melpis), Interamnium (which is situated at the confluence of two rivers, the Liris and another), and Casinum (this too a noteworthy city), which is the last city of Latium;<sup>1</sup> for what is called Teanum "Sidicinum," which is situated next in order after Casinum, shows clearly from its epithet that it belongs to the Sidicini. These people are Osci, a tribe of Campani that has disappeared; and therefore this city might be called a part of Campania, although it is the largest of the cities on the Latin Way, as also might the city<sup>2</sup> that comes next after it, that of the Caleni (this too a noteworthy city), although its territory joins that of Casilinum.

10. Then take the cities on either side of the Latin Way. On the right are those between it and the Appian Way, namely, Setia and Signia, which produce wine, the former, one of the costly wines, and the latter, the best for checking the bowels (what is called the "Signine" wine). And farther on, beyond Signia, is Privernum, and Cora, and Suessa,<sup>3</sup> and also Trapontium,<sup>4</sup> Velitrae, and Aletrium; and besides these, Fregellae (past which the Liris flows, the river that empties at Minturnae<sup>5</sup>), which is now merely a village, although it was once a noteworthy city<sup>6</sup> and formerly held as dependencies most of the surrounding cities just mentioned (and at the present time the inhabitants of these cities meet at Fregellae both to hold markets and to perform certain sacred rites), but, having revolted, it was

demolished by the Romans. Most of these cities, as also of those on the Latin Way and of those on the far side of it, are situated in the country of the Hernici, the Acci, and the Volsei, though all were founded by the Romans. Again, on the left of the Latin Way are the cities between it and the Valerian Way: first, Gaiii, situated on the Praenestine Way, with a rock-quarry that is more serviceable to Rome than any other, and equidistant—about one hundred stadia—from Rome and Praeneste; then Praeneste, about which I shall speak presently; then the cities in those mountains that are above Praeneste: Capitolum, the little city of the Hernici, and Anagnin, a noteworthy city, and Cerete, and Sora (past which the Liris flows as it issues from the mountains and comes to Fregellae and Minturnae<sup>1</sup>); and then certain other places, and Venafrum, whence comes the finest olive-oil. Now the city of Venafrum is situated on an eminence, and past the base of the hill flows the Volturnus River, which runs past Casilinum also and empties into the sea at the city of like name.<sup>2</sup> But when you come to the cities of Aesernia and Allifae you are already in Samnitic territory; the former was destroyed in the Marsic War, while the latter still endures.

11. The Valerian Way has its beginning at Tibur, and leads to the country of the Marsi, and to Corfinium, the metropolis of the Peligni. On the Valerian Way are the following cities of Latium: Varia, Carseoli, and Alba,<sup>3</sup> and also, near by, the city of Cuculum.<sup>4</sup> Tibur, Praeneste, and Tusculum are all visible from Rome. First, Tibur:

it possesses the temple of Heracles, and also the waterfall formed by the Anio, a navigable river<sup>1</sup> which falls down from a great height into a deep, wooded<sup>2</sup> ravine near the city itself. Thence the river flows out through a very fruitful plain past the quarries of the Tiburtine stone,<sup>3</sup> and of the stone of Gabii,<sup>4</sup> and of what is called "red stone"; so that the delivery from the quarries and the transportation by water are perfectly easy—most of the works of art<sup>5</sup> at Rome being constructed of stone brought thence. In this plain, also, flow what are called the Albula waters<sup>6</sup>—cold waters from many springs, helpful, both as drinking-water and as baths, in the cure of various diseases; and such, also, are the Labana waters,<sup>7</sup> not far from the former, on the Nomentan Way and in the neighbourhood of Eretum. Secondly, Praeneste: here is the temple of Fortuna, noted for its oracles.<sup>8</sup> Both of these cities are situated near the same mountain range, and they are about one hundred stadia distant from one another; but from Rome Praeneste is as much as double that distance, whereas Tibur is less than double. Both are called Greek cities;<sup>9</sup> in any case Praeneste, they say, was formerly called "Polystephanos."<sup>10</sup>

Geogr.* II, p. 665, quoted by Tozer). See *Encyc. Brit.* s.v. "Praeneste" (J. G. Frazer).

<sup>3</sup> On the reservoirs of Praeneste, "hollowed out in the rock of the mountain," and the water-supply in general, see Magoffin, *A Study of the Topography of Praeneste*, Johns Hopkins University Historical Studies, 1908, p. 435.

## GEOGRAPHY, §. 3. 11-12

Now each is well fortified by nature, but Praeneste is much more so, since it has for a citadel<sup>1</sup> a high mountain which not only rises above the city but also in the rear is disjoined from the unbroken mountain range by a neck of land above which it rises as much as two stadia in a perpendicular ascent.<sup>2</sup> And in addition to its natural strength, subterranean passages have been bored through it from all sides as far as the plains—some for water-supply,<sup>3</sup> others for secret exits (it was in one of these that Marius was put to death when he was being besieged). Now although in the case of all other cities, generally speaking, good defences are accounted a blessing, in the case of the Praenestini they have proved to be a misfortune, because of the seditions among the Romans. For all who have attempted a revolution take refuge in Praeneste; and, if forced by a siege to surrender, the inhabitants, in addition to the damage done to their city, meet with the further misfortune that their territory is alienated, the guilt being transferred to the guiltless.<sup>4</sup> The Verestis<sup>5</sup> River flows through the territory in question. The aforesaid cities are to the east of Rome.

12. But still closer to Rome than the mountainous country<sup>6</sup> where these cities lie, there is another ridge, which leaves a valley (the valley near

Algidum) between them and is high as far as Mt. Albanus.<sup>1</sup> It is on this chain that Tusculum is situated, a city with no mean equipment of buildings; and it is adorned by the plantings and villas encircling it, and particularly by those that extend below the city in the general direction of the city of Rome; for here Tusculum is a fertile and well-watered hill, which in many places rises gently into crests and admits of magnificently devised royal palaces. Adjoining this hill are also the foothills of Mt. Albanus, with the same fertility and the same kind of palaces. Then, next, come the plains, some connecting with Rome and its suburbs, and others with the sea. Now although the plains that connect with the sea are less healthful, the others are both pleasant to dwell in and decked out in similar manner. After Mt. Albanus<sup>2</sup> comes Aricia, a city on the Appian Way; it is one hundred and sixty stadia distant from Rome. Aricia lies in a hollow, but for all that it has a naturally strong citadel.<sup>3</sup> Above Aricia lies, first, on the right hand side of the Appian Way, Lanuvium,<sup>4</sup> a city of the Romans, from which both the sea and Antium are visible, and, secondly, to the left of the Way as you go up from Aricia, the Artemisium, which they call Nemus.<sup>5</sup> The temple of the Arician,<sup>6</sup> they say, is a

<sup>1</sup> The ancient Aricia lay in the "Vallis Aricina" (now "Valle Aricciana"), an extinct crater below the modern town of Aricia, which latter occupies the site of the ancient citadel, a steep hill.

<sup>4</sup> "Lavinium," the reading of the MSS., has rightly been emended to "Lanuvium." "Owing to a curious confusion between this place and Lavinium, which dates back to the middle ages, its modern name is 'Civita Lavinia' " (Tozer, *Selections*, p. 150).

<sup>1</sup> That is, "Artemis Tauropolos"—Artemis in her capacity as goddess of the Tauri.

<sup>2</sup> The "Scythian element" referred to is the sacrifice of strangers by the Tauri, as described, for example, in Euripides' *Iphigenia among the Tauri*.

<sup>3</sup> Strabo refers to the Lacus Nemorensis (now Lago di

copy of that of the Tauropolis.<sup>1</sup> And in fact a barbaric, and Scythian,<sup>2</sup> element predominates in the sacred usages, for the people set up as priest merely a run-away slave who has slain with his own hand the man previously consecrated to that office; accordingly the priest is always armed with a sword, looking around for the attacks, and ready to defend himself. The temple is in a sacred grove, and in front of it is a lake which resembles an open sea, and round about it in a circle lies an unbroken and very high mountain-brow, which encloses both the temple and the water in a place that is hollow and deep. You can see the springs, it is true, from which the lake is fed (one of them is "Pygeria," as it is called after a certain deity), but the outflows at the lake itself are not apparent, though they are pointed out to you at a distance outside the hollow, where they rise to the surface.<sup>3</sup>

13. Near these places is also Mt. Albannus, which rises considerably above the Artemisium and the mountain-brows round about it, though they too are high and rather steep. This mountain also has a lake,<sup>4</sup> much larger than the one at the Artemisium. The previously mentioned cities of Latium<sup>5</sup> are farther away<sup>6</sup> than these places. But of all the cities of Latium, Alba<sup>7</sup> is the farthest in the interior, since

Nemi), an extinct crater three miles in circumference and over three hundred feet deep. It is now drained by an artificial emissarium. According to Servius (note on Virgil, *Aeneid* 7. 515) it was called by the Latini the "Speculum" ("mirror") of Diana.

<sup>3</sup> That is, the flowing waters in the depths of the earth (cp. 3. 5. 7), as distinguished from the "springs" by which Strabo always means the mouths at the surface of the earth.

it is on the confines of the Mursi; it is situated on a lofty rock, near Lake Fucinus,<sup>1</sup> which in size is like an open sea. The lake is used mostly by the Mursi and all the neighbouring peoples. They say that it not only fills up sometimes as far as the mountainous country, but also lowers again enough to permit the places which have been converted into marshes to get dry and to be tilled—whether it be that changes take place, sporadically and in a way that is not apparent, in the flow of the waters down in the depths,<sup>2</sup> and that they flow back together again, or that the springs completely fail and then by pressure are brought together again—as is said to be the case with the Amenanus, the river that flows through Catania, for it fails for many years and then flows again.<sup>3</sup> It is from Lake Fucinus, the story goes, that the springs of the Aqua Marcia come,<sup>4</sup> which brings drinking-water to Rome and has the highest repute as compared with the other waters. Because of the fact that Alba is situated deep in the interior of the country, and is also well-walled, the Romans often used it for a prison, shutting up therein those who have to be kept under guard.<sup>5</sup>

<sup>1</sup> The result, apparently, of volcanic action in Mt. Aetna from which it flows.

<sup>2</sup> The "Aqua Marcia" was one of the Roman aqueducts, and its principal reservoir was near Sublaqueum (now Subiaco). The story was that the River Pitonius (now Padogna) rose in the mountains of the Peligni, flowed through Lake Fucinus without mingling with its waters, then disappeared in the earth, and finally came forth as the "Marcian Waters" near Sublaqueum. Pliny himself (31. 24) believed the story (see Tozer, *Selections*, p. 162).

<sup>3</sup> For instance, Syphax, King of Numidia (Livy 30. 17), Persena, King of Macedonia (Livy 45. 42), and Bituitas, King of the Arverni (Valerius Max. 9. 6, and Livy *Epit.* 61).

## IV

1. I began with the tribes that live next to the Alps, and with that part of the Apennine Mountains which lies next to them, and then, passing over that part, traversed all the country on this side which lies between the Tyrrhenian Sea and that part of the Apennine Mountains which bends towards the Adriatic and stretches to the countries of the Samnitae and the Campani; I shall now, therefore, go back and indicate the tribes that live in these mountains, and also in the foothills both of the country outside the mountains, as far as the Adriatic seaboard, and of the country this side. But I must begin again with the Celtic boundaries.<sup>1</sup>

2. Next after those cities of the Ombrii that are between Ariminum and Ancona comes the Picentine country.<sup>2</sup> The Picentini are originally from the Sabine country, a woodpecker having led the way for their progenitors; and hence their name, for they call this bird "picus," and consider it sacred to Mars. The country they live in begins at the mountains and extends as far as the plains and the sea, thus having increased in length more than breadth; it is good for every use to which it may be put, though better for fruits than for grain. Its breadth—that from the mountains to the sea—taken at the different intervals,<sup>3</sup> is irregular, while its length, by a voyage along the coast from the Aesis River to Castrum, is eight hundred stadia. Its cities are, first, Ancona, a Greek city, founded by the Syracusans who fled from the tyranny of Dionysius; it is situated on a promontory, which by its curve

towards the north encloses a harbour; and it is exceedingly productive of wine and wheat. Near it is the city of Auxumum, which is a short distance above the sea; then Septempeda, Pnucntia,<sup>1</sup> Potentin and Firmum Picenum (its port-town is Castellum).<sup>2</sup> Next in order comes the temple of Cupra,<sup>3</sup> which was established, and founded as a city, by the Tyrrheni, who call Hera "Cupra"; then, the River Truentinus<sup>4</sup> and the city named after it;<sup>5</sup> then Castrum Novum, and the River Matrinus<sup>6</sup> (which flows from the city of the Adriani<sup>7</sup>), on which is Adria's port-town,<sup>8</sup> named after the river. Not only is Adria in the interior, but also Asculum Picenum, a place that is well fortified by nature, not only where the wall is situated—but also the mountains that lie round about it are impassable for armies.<sup>9</sup> Beyond the Picentine country are the Vestini, the Marsi, the Peligni, the Marrucini, and the Prentani (a Samnitic tribe); they occupy the mountain-country there, their territory touching upon the sea for only short stretches. These tribes are small, it is true, but they are very brave and oftentimes have exhibited this virtue to the Romans: first, when they went to war against them; a second time, when they took the field with them as allies;

<sup>6</sup> The words "not only . . . armies" are awkward in English as in the Greek, but the meaning is clear enough. Kramer's guess (see critical note on opposite page) would yield the following: "not only on account of the hill on which the wall is situated, but also (on account of) the mountains that lie round about it, which are impassable for armies."

<sup>2</sup> But on coins the name is spelled "Italia," not "Italica" (Pauly-Wissowa, s.v. "Corfinium").

and a third time when, begging for freedom and political rights without getting them, they revolted and kindled what is called the Marsic War, for they proclaimed Corfinium (the metropolis of the Peligni) the common city for all the Italiotes, instead of Rome, making it their base of operations for the war and changing its name to *Italica*;<sup>1</sup> and here it was that they mustered all their followers and elected consuls and praetors.<sup>2</sup> And they persisted in the war for two years, until they achieved the partnership for which they went to war. The war was named "Marsic" after the people who began the revolt, *Pompaedius* in particular.<sup>3</sup> Now these peoples live in villages, generally speaking, but they also have cities: first, above the sea, Corfinium, Sulmon, Maruvium, and Teate,<sup>4</sup> the metropolis of the Marrucini. And, secondly, on the sea itself, Aternum, which borders on the Picentine country and is of like name with the river<sup>5</sup> that separates the Vestine country from the Marrucine; for it flows from the territory of Amiternum, and through the Vestine country, leaving on its right that part of the Marrucine country which lies above the Peligni (it may be crossed by a pontoon-bridge).<sup>6</sup> But although the little city<sup>7</sup> that is named after the river

<sup>3</sup> λέγονται is not found in the earlier MSS., and only in n p.

<sup>1</sup> Apparently what is now Termoli (see Pauly-Wissowa, s.v., and Nisaeus, Vol. II., p. 783).

<sup>2</sup> "Ortonium" is otherwise unknown. The text appears to be corrupt, but all emendations are mere guesses. Meineke relegates the whole sentence to the foot of the page. We should have expected Strabo to refer here to the Frento River as the southern boundary of the country of the Frentani.

belongs to the Vestini, it is used as a common port both by the Peligni and the Marrucini. The pontoon-bridge is twenty-four stadia distant from Corfinium. After Aternum comes Orton, the port-town of the Frentani, and then Buca<sup>1</sup> (it too belongs to the Frentani), whose territory borders on that of Teanum Apulum. Ortonium<sup>2</sup> is in the country of the Frentani, a cliff-town belonging to pirates, whose dwellings are pieced together from the wreckage of ships; and in every other respect they are said to be a bestial folk. Between Orton and Aternum is the Sagrus River, which separates the country of the Frentani from that of the Peligni.<sup>3</sup> The voyage along the coast from the Picentine country to the country of those Apuli whom the Greeks call "Daunii"<sup>4</sup> is about four hundred and ninety stadia.

3. Next in order after Latium come both Campania, which stretches along the sea, and, above Campania, in the interior, the Samnite country,<sup>5</sup> which extends as far as the country of the Frentani and the Daunii; then the Daunii themselves, and the rest of the tribes on to the Sicilian Strait. But I must first speak of Campania. There is a fair-sized gulf which, beginning at Sinuessa, extends along the coast next thereafter as far as Misenum, and also another gulf, much larger than the first, which begins at Misenum; they call

<sup>1</sup> Ptolemaeus (3. 16) wrongly associates the mouth of the Sagrus with the country of the Peligni (cp. Niasen, Vol. II., p. 778), for the Sagrus empties between Ortona and Histonium (not Aternum). Strabo's assertion, however, might be interpreted to mean, not the lower course, but the northerly fork, of the Sagrus; otherwise he too is in error.

the latter<sup>1</sup> the "Crater,"<sup>2</sup> and the "Crater" forms a bay between the two capes of Misenum<sup>3</sup> and Athenæum.<sup>4</sup> Above these coasts lies the whole of Campania; it is the most blest of all plains, and round about it lie fruitful hills, and the mountains of the Samnitæ and of the Osci. Antiochus,<sup>5</sup> it is true, says that the Opici once lived in this country and that "they are also called Ausones," but Polybius clearly believes that they are two different tribes, for he says "the Opici and the Ausones live in this country round about the Crater." Again, others say that, although at first it was inhabited by the Opici, and also by the Ausones,<sup>6</sup> later on it was taken by the Sidicini, an Oscan tribe,<sup>7</sup> but the Sidicini were ejected by the Cumæi, and in turn the Cumæi by the Tyrrheni. For on account of its fertility, they continue, the plain became an object of contention; and the Tyrrheni founded twelve cities in the country and named their capital city "Capua";<sup>8</sup> but on account of their luxurious living they became soft, and consequently, just as they had been made to get out of the country round about the Padus,<sup>9</sup> so now they had to yield this country to the Samnitæ; and in turn the Samnitæ were ejected by the Romans. A proof of the fruitfulness of the country is that it produces the finest grain—I mean the wheat from which groats are made, which is superior, not only to every kind of rice, but also to almost every kind of grain-food. that, in the course of one year, some of the plains are seeded twice with spelt, the third time with millet, and others still the fourth time with vegetables. And indeed it is from here that the Romans obtain their best wine, namely, the Falernian, the Statanian, and the Calenian,<sup>1</sup> though already the Surrentine wine is taking its place as a rival of the three, for recent tests show that it admits of ageing. And so, in the same way, all the country round about Venafrum, which is on the border of the plains, is well-supplied with the olive.

4. The cities on the sea after Sinuessa are: Liternum, where is the tomb of Scipio, the one first to be called "Africanus"; for he spent his last days here, giving up the affairs of state, so strong was his hatred for certain persons. A river<sup>2</sup> of like name flows by the city. And so, likewise, the Vulturnus has a name like that of the city<sup>3</sup> which is situated beside it and which comes next in order after Sinuessa; this river flows through Venafrum and the centre of Campania. Next in order after these two cities comes Cumae,<sup>4</sup> a city founded in most ancient times by people from Chalcis and Cumae; for it is the oldest of all the Sicilian and the Italiote cities. However, the men who led the expedition, Hippocles of Cumae<sup>5</sup> and Megasthenes of Chalcis, made an agreement with one another that the city should be a colony of Chalcis, and a namesake of Cumae; and, hence, although the city is now called Cumae, it is reputed to have been founded by the Chalcidians alone. In earlier times, then, the city was prosperous, and so was what is called the Phlegraean Plain,

which mythology has made the setting of the story of the Giants—for no other reason, it would seem, than that the land, on account of its excellence, was a thing to fight for; but later on, when the Campani became established as masters of the city, they committed numerous outrages against the people in general, and, what is more, cohabited with the wives of the citizens. Nevertheless, many traces of the Greek decorum and usages are still preserved there. But according to some, "Cumae" is named after the "Kumata";<sup>1</sup> for the neighbouring shore is surfy and exposed to the wind. And Cumae also has the best fisheries for the catching of large fish. Moreover, on this gulf there is a forest of scrub trees, extending for many stadia over a waterless and sandy tract, which they call "Silva Gallinaria."<sup>2</sup> Here it was that the admirals of Sextus Pompeius assembled bands of pirates at that critical time when he caused Sicily to revolt.<sup>3</sup>

5. Near Cumae is Cape Misenum, and between them is the Acherusian Lake, a kind of shoal-water estuary of the sea. After you double Cape Misenum you immediately come to a harbour, at the base of the cape, and, after the harbour, to a stretch of coast which runs inland and forms a deeply indented gulf—the coast on which is situated Baiæ, and those hot springs that are suited both to the taste of the fastidious and to the cure of disease. Contiguous to Baiæ is Gulf Lucrinus,<sup>4</sup> and also, behind this gulf, Gulf Avernus,<sup>5</sup> which forms a peninsula of the land that is cut off as far as Misenum, beginning from the

<sup>1</sup> Agrippa connected Lake Avernus and Lake Lucrinus with a canal, and Lake Avernus with the port of Cumae with a tunnel.

<sup>2</sup> "Necyia" is the title the ancients gave to the eleventh book of the Odyssey, which tells the story of Odysseus' descent into Hades and of the magic rites by which the ghosts of the dead were called up, and also relates the various conversations in Hades.

transverse line which runs between Cumae and Avernus, for there remains an isthmus only a few stadia broad, that is, reckoning straight through the tunnel to Cumae itself and to the sea next to Cumae.<sup>2</sup> The people prior to my time were wont to make Avernus the setting of the fabulous story of the Homeric "Necyia";<sup>3</sup> and, what is more, writers tell us that there actually was an oracle of the dead here and that Odysseus visited it. Now Gulf Avernus is deep up to the very shore and has a clear outlet;<sup>3</sup> and it has both the size and character of a harbour, although it is useless as a harbour because of the fact that Gulf Lucrinus lies before it and is somewhat shallow as well as considerable in extent. Again, Avernus is enclosed round about by steep hill-brows that rise above it on all sides except where you sail into it (at the present time they have been brought by the toil of man into cultivation, though in former times they were thickly covered with a wild and untrodden forest of large trees); and these hill-brows, because of the superstition of man, used to make the gulf a shadowy place. And the natives used to add the further fable that all birds that fly over it fall down into the water,<sup>4</sup> being killed by the vapours that

<sup>2</sup> Although the Romans called Lucrinus and Avernus "lakes," Strabo calls them "gulfs"—the former a sea-gulf and the latter an inner gulf connecting with the former. The configuration of the country has been greatly changed since Strabo's time, for instance, in 1538 A.D., when what is now Monte Nuova (455 ft.) was upheaved by volcanic eruption, and the area of Lake Lucrinus was much reduced.

<sup>4</sup> Cp. Virgil, *Aeneid* 6, 239 and Lucratus 6, 740. The word "Avernus" means "Birdless."

<sup>1</sup> For example, the "Plutonium" at Hierapolis in Asia Minor (13. 4. 14). The "Plutonia" were precincts where mephitic vapours arose, and they were so called because they were regarded as entrances to the nether world. The cave itself, within the "Plutonium," was called "Charonium" (14. 1. 11 and 14. 1. 14).

<sup>2</sup> See 1. 1. 10 and 1. 2. 9.

rise from it, as in the case of all the Plutonia.<sup>1</sup> And people used to suppose that this too was a Plutonian place and that the Cimmerians<sup>2</sup> had actually been there. At any rate, only those who had sacrificed beforehand and propitiated the nether deities could sail into Avernus, and priests who held the locality on lease were there to give directions in all such matters; and there is a fountain of potable water at this place, on the sea, but people used to abstain from it because they regarded it as the water of the Styx; and the oracle, too, is situated somewhere near it; and further, the hot springs near by and Lake Acherusia<sup>3</sup> betokened the River Pyriphlegethon.<sup>4</sup> Again, Ephorus, in the passage where he claims the locality in question for the Cimmerians, says: 'They live in underground houses, which they call "argillae,"<sup>5</sup> and it is through tunnels that they visit one another, back and forth, and also admit strangers to the oracle, which is situated far beneath the earth; and they live on what they get from mining, and from those who consult the oracle,<sup>6</sup> and from the king of the country, who has appointed to them fixed allowances;<sup>7</sup> and those who live

The River Acheron (now Phanariotikos), in Epirus, was associated with the nether world: it disappears in the earth for some distance and then reappears, losing its waters in the marshy "Acherusian Lake" before emptying into the Ionian Sea.

<sup>3</sup> "Argillae" apparently means "clay"-dwellings.

<sup>4</sup> That is, as we may infer, on the meat of the sacrificial victims, in addition to any fees which may have been charged.

<sup>5</sup> Thus acknowledging, according to Ephorus, that the country belongs to the Cimmerians.

about the oracle have an ancestral custom, that no one should see the sun, but should go outside the caverns only during the night; and it is for this reason that the poet speaks of them as follows: "And never does the shining sun look upon them"; but later on the Cimmerians were destroyed by a certain king, because the response of the oracle did not turn out in his favour; the seat of the oracle, however, still endures, although it has been removed to another place. Such, then, are the stories the people before my time used to tell, but now that the forest round about Avernus has been cut down by Agrippa, and the tracts of land have been built up with houses, and the tunnel has been cut from Avernus to Cumæ, all those stories have proven to be mere myths; and yet the Cocceius<sup>1</sup> who made, not only this tunnel, but also the one from Dicæarchia (near Baiæ) to Neapolis, was pretty well acquainted with the story just now related about the Cimmerians, and it may very well be that he also deemed it an ancestral custom,<sup>2</sup> for this region, that its roads should run through tunnels.

6. Gulf Lucrinus broadens out as far as Baiæ; and it is shut off from the outer sea by a mound eight stadia in length and broad as a wagon-road. This mound is said to have been brought to completion by Heracles, when he was driving the cattle of Geryon. But since it admitted the waves over its surface in times of storm, so that it could not easily be traversed on foot, Agrippa built it up higher. The gulf affords entrance to light boats only; and, though useless as a place to moor boats,

it affords most abundant catches of oysters. And some say that this gulf itself is Lake Acherusia, while Artemidorus says that Gulf Avernus itself is that lake. But Baiæ is said to be named after one of the companions of Odysseus, Baius; and also Misenum.<sup>1</sup> Next in order come the headlands that are in the neighbourhood of Dicæarchia, and then the city itself. In earlier times it was only a port-town of the Cumæans, situated on the brow of a hill,<sup>2</sup> but at the time of Hannibal's expedition the Romans settled a colony there, and changed its name to *Putcoli* from the wells<sup>3</sup> there—though some say that it was from the foul smell<sup>4</sup> of the waters, since the whole district, as far as Baiæ and Cumæ, has a foul smell, because it is full of sulphur and fire and hot waters. And some believe that it is for this reason that the Cumæan country was called "*Phlegra*,"<sup>5</sup> and that it is the wounds of the fallen giants, inflicted by the thunderbolts, that pour forth those streams of fire and water. And the city has become a very great emporium, since it has havens that have been made by the hand of man—a thing made possible by the natural qualities of the sand, for it is in proper proportion to the lime,<sup>6</sup> and takes a firm set and solidity. And therefore, by mixing the sand-ash<sup>7</sup> with the lime, they can run jetties out into the sea and thus make the wide-open shores

of Pallene, the westernmost of the peninsulas of Chalcidice, and a volcanic region. Mythology associates the Giants with both regions (cp. 5. 4. 4).

<sup>1</sup> That is, its constituents are in proper proportion to the constituents of the lime.

<sup>2</sup> This volcanic substance is now called "*pozzuolana*," or "*tuff*."

Immediately above the city lies the Forum of Hephaestus,<sup>1</sup> a plain shut in all round by exceedingly hot ridges, which in numerous places have fumaroles that are like chimneys and that have a rather noisome smell; and the plain is full of drifted sulphur.

7. After Dicæarchia comes Neapolis, a city of the Cumæans. At a later time it was re-colonised by Chalcidians, and also by some Pithecussæans and Athenians, and hence, for this reason, was called Neapolis.<sup>2</sup> A monument of Parthenope, one of the Sirens, is pointed out in Neapolis, and in accordance with an oracle a gymnastic contest is celebrated there. But at a still later time, as the result of a discussion, they admitted some of the Campani as fellow inhabitants, and thus they were forced to treat their worst enemies as their best friends, now that they had alienated their proper friends. This is disclosed by the names of their demarchi, for the earliest names are Greek only, whereas the later are Greek mixed with Campanian.<sup>3</sup> And very many traces of Greek culture are preserved there—gymnasia, ephebeia,<sup>4</sup> phratræ,<sup>5</sup> and Greek names of things, although the people are Romans. And at the present time a sacred contest is celebrated among them every four years, in music<sup>6</sup> as well as gymnastics; it lasts for several days, and vies with the and apparently several of them hold office together (see Tüzer, *Selektion*, p. 168, and Beloch, *Campanien*, pp. 31, 45).

<sup>2</sup> Beloch (pp. 41-43), from inscriptions of Neapolis, gives the names of nine different phratræ.

most famous of those celebrated in Greece.<sup>1</sup> Here, too, there is a tunnel—the mountain between Dicaearchia and Neapolis having been tunneled like the one leading to Cumae,<sup>2</sup> and a road having been opened up for a distance of many stadia that is wide enough to allow teams going in opposite directions to pass each other.<sup>3</sup> And windows have been cut out at many places, and thus the light of day is brought down from the surface of the mountain along shafts that are of considerable depth.<sup>4</sup> Furthermore, Neapolis has springs of hot water and bathing-establishments that are not inferior to those at Baiæ, although it is far short of Baiæ in the number of people, for at Baiæ, where palace on palace has been built, one after another, a new city has arisen, not inferior to Dicaearchia. And greater vogue is given to the Greek mode of life at Neapolis by the people who withdraw thither from Rome for the sake of rest—I mean the class<sup>5</sup> who have made their livelihood by training the young, or still others who, because of old age or infirmity, long to live in relaxation; and some of the Romans, too, taking delight in this way of living and observing the great number of men of the same culture as themselves sojourning there, gladly fall in love with the place and make it their permanent abode.

8. Next after Neapolis comes the Heracleian Fortress,<sup>6</sup> with a promontory which runs out into the sea and so admirably catches the breezes of the southwest wind that it makes the settlement a

healthful place to live in. Both this settlement and the one next after it, *Pompaia*<sup>1</sup> (past which flows the River *Sarnus*), were once held by the *Osci*; then, by the *Tyrrheni* and the *Pelasgi*; and after that, by the *Samnitæ*; but they, too, were ejected from the places. *Pompaia*, on the River *Sarnus*—a river which both takes the cargoes inland and sends them out to sea—is the port-town of *Nola*, *Nuceria*, and *Acherræ*<sup>2</sup> (a place with name like that of the settlement<sup>3</sup> near *Cremona*). Above these places lies *Mt. Vesuvius*, which, save for its summit, has dwellings all round, on farm-lands that are absolutely beautiful. As for the summit, a considerable part of it is flat, but all of it is unfruitful, and looks ash-coloured, and it shows pore-like cavities in masses of rock that are soot-coloured on the surface, these masses of rock looking as though they had been eaten out by fire; and hence one might infer that in earlier times this district was on fire and had craters of fire, and then, because the fuel gave out, was quenched. Perhaps, too, this is the cause of the fruitfulness of the country all round the mountain; just as at *Catana*, it is said, that part of the country which had been covered with ash-dust from the hot ashes carried up into the air by the fire of *Actna* made the land suited to the vine; for it<sup>4</sup> contains the substance that fattens<sup>5</sup> both the soil which is burnt out and that

\* Strabo wrongly thought that the volcanic ash itself contained a fatty substance which enriched the soil. The enriching substance, of course, was the organic matter which accumulated in the ash-dust during a long period of weathering. In time the ash-dust became ash soil. In G. 2. 3 Strabo quotes *Poecilanius* as saying that this same part of the country was covered with volcanic ash "to a considerable depth."

<sup>3</sup> Some of the ash-soil, Strabo means, becomes so rich that it is combustible, and unfit for the vine and different fruits; but he does not say whether it is later burnt out by volcanic matter, or by some accidental or human agency. The burning out of excessively rich soil was at one time not an uncommon practice in England and Germany (F. H. Storer, *Agriculture*, 7th. ed., Vol. II., pp. 188 ff.). The English country now

which produces the fruits;<sup>1</sup> so then, when it<sup>2</sup> acquired plenty of fat, it was suited to burning out, as is the case with all sulphur-like substances, and then when it had been evaporated<sup>3</sup> and quenched<sup>4</sup> and reduced to ash-dust, it passed into a state of fruitfulness. Next after Pompala comes Surrentum, a city of the Campani, whence the Athenæum<sup>5</sup> juts forth into the sea, which some call the Cape of the Sirenessæ. There is a sanctuary of Athene, built by Odysseus, on the tip of the Cape. It is only a short voyage from here across to the island of Capreae; and after doubling the cape you come to desert, rocky isles, which are called the Sirens. On the side of the Cape toward Surrentum people show you a kind of temple, and offerings dedicated there long ago, because the people in the neighbourhood hold the place in honour. Here, then, the gulf that is called the "Crater"<sup>6</sup> comes to an end, being marked off by two capes that face the south, namely, Misenum and Athenæum. And the whole of the gulf is garnished, in part by the cities which I have just mentioned, and in part by the residences and plantations, which, since they intervene in unbroken succession, present the appearance of a single city.

9. The island of Prochyta lies off Cape Misenum, and it is a fragment broken off of Pithecussæ.<sup>7</sup> Pithecussæ was once settled by Eretrians and also

operating in the region of Lake Copais in Boeotia burns out the soil before putting it in cultivation.

<sup>3</sup> Strabo's conciseness (if the MSS. are correct) leaves the passage obscure as to whether (1) both peoples left together because of a quarrel with other inhabitants, and later on returned, only to be driven out by the earthquakes (about

Chalcidians, who, although they had prospered there on account of the fruitfulness of the soil and on account of the gold mines, forsook the island<sup>1</sup> as the result of a quarrel; later on they were also driven out of the island by earthquakes, and by eruptions of fire, sea, and hot waters; for the island has "fistulas" of this sort, and it was these that caused also the people sent thither by Hiero the tyrant of Syracuse to forsake the island and the fortress they had erected there; and then the Neapolitans came over and took possession. Hence, also, the myth according to which Typhon lies beneath this island, and when he turns his body the flames and the waters, and sometimes even small islands containing boiling water, spout forth. But what Pindar says is more plausible, since he starts with the actual phenomena; for this whole channel, beginning at the Cumæan country and extending as far as Sicily, is full of fire, and has caverns deep down in the earth that form a single whole, connecting not only with one another but also with the mainland; and therefore, not only Aetna clearly has such a character as it is reported by all to have, but also the Lipari Islands, and the districts round about Dicæarchia, Neapolis, and Baiæ, and the island of Pithecussæ. This, I say, is Pindar's thought when he says that Typhon lies beneath this whole region: "Now, however, both Sicily and the sea-fenced cliffs beyond Cumæ press hard upon his shaggy breast." And

500 B. C.), or (2) left separately, first, the Chalcidians, because of a quarrel between the two, and, later on, the Eretrians, because of the earthquakes, or (3) part of each left at first, and the rest later on; but the first interpretation seems more likely. Livy (3. 22), without mentioning the Eretrians, ascribes the founding of Cumæ to the Chalcidians who had previously settled "Æonaria and Pithecussæ."

Timaeus, also, says that many marvellous things are told by the ancients about Pithecussae, and that only shortly before his own time the hill called Epopeus, in the centre of the island, on being shaken by earthquakes, cast forth fire and shoved the part between it and the sea back to the open sea; and the part of the land that had been burned to ashes, on being lifted high in the air, crashed down again upon the island like a whirlwind; and the sea retreated for three stadia, but not long after retreating turned back and with its reverse current deluged the island; and, consequently, the fire in the island was quenched, but the noise was such that the people on the mainland fled from the coast into Campania. The hot springs in the island are thought to cure those who have gall-stones. Capreae had two small towns in ancient times, though later on only one. The Neapolitans took possession of this island too; and although they lost Pithecussae in war, they got it back again, Augustus Caesar giving it to them, though he appropriated Capreae to himself personally and erected buildings on it. Such, then, are the sea-board cities of Campania and the islands that lie off it.

10. In the interior, take first Capua: It is the capital city—a "capital" in reality, as the etymology of its name implies,<sup>1</sup> for in comparison with it all the rest might be regarded as only small towns, except Tenuum Sidicinum, which is indeed a noteworthy city. It, too,<sup>2</sup> lies on the Appian Way, and so do the three cities which, among the rest, lead from it<sup>3</sup>

to Brentesium,<sup>1</sup> namely, Calatia, Caudium, and Beneventum. But Casilnum is situated towards Roine,<sup>2</sup> on the River Volturnus; it was here that five hundred and forty of the Praenestini held out against Hannibal—then at the height of his strength—for so long that, by reason of famine, a “medimnus”<sup>3</sup> was sold for two hundred “drachmae,”<sup>4</sup> and the man who sold it died of hunger, whereas the man who bought it escaped with his life. And when Hannibal saw them sowing turnips near the wall, he wondered, and with reason, at their long-suffering—that they expected to hold out long enough for the turnips to get ripe; and in fact they all survived, it is said, except a few who perished either because of hunger or in the battles.

11. But in addition to the cities aforesaid, the following (to which I have adverted before) are also Campanian cities—Cales<sup>5</sup> and Teanum Sidicinum, whose territories are separated by the two temples of Fortune situated on either side of the Latin Way; and so are Suessula, Atella, Nola, Nuceria, Acheriae, Abella, and other settlements (some of which are said to be Samnite) that are still smaller than these. As for the Samnitae: In earlier times they made expeditions even as far as that part of the Latin country which is about Ardea,

<sup>1</sup> About a bushel and a half (of grain). But, following Casaubon, all the editors except Groskurd emend “medimnus” to “rat,” to agree with the story of Pliny (8. 82), Valerius Maximus (7. 6), and Frontinus (*Strategemata* 4. 5. 20). And it seems almost certain that Strabo so wrote.

separates the old Campania from this country.<sup>1</sup> In regard to this river, writers report the following as a special characteristic, that although its water is potable, any plant that is let down into it turns to stone, though it keeps its colour and its shape.<sup>2</sup> Picentia first belonged to the Picentes, as metropolis, but at the present time they live only in villages, having been driven away by the Romans because they had made common cause with Hannibal. And instead of doing military service, they were at that time appointed to serve the State as couriers and letter-carriers (as were also, for the same reasons, both the Leucani and the Brettii); and for the sake of keeping watch over the Picentes the Romans fortified Salernum against them, a city situated only a short distance above the sea. The distance from the Sirenussae to the Silaris is two hundred and sixty stadia.

<sup>1</sup> The later editors emend "Campania" to "Italy" (op. 6. 1. 1). But it seems far more likely that Strabo wrote (or else had in mind) the words "Lucania and" before "the Silaris River." In this case "this country" means Lucania. Indeed, Strabo says in the succeeding paragraph (6. 1. 1) that Lucania begins at Silaris. And he has already defined the seaboard of the Campania of his own time as beginning at Sinuessa, and ending at Surrentum and the Cape of Minerva (see 6. 2. 1, 5. 3. 4, 5. 4. 3, and 5. 4. 8-9).
